I agree, though you need to shop for a balun that works in the AM BCB
(if that is your interest) I think only Palomars go that low. [I still
have mine from the pre-Wellbrook days.]
http://www.palomar-engineers.com/MLB-1/mlb-1.html
A little more than $30+. Occasionally you will find a North Hills
transformer at the flea market, many of which can be used in the same
application.

No. You are thinking of Bush and Jeff Guckert Gannon. Bush changed the
name of the Oval Office to the Oval Orifice.

In hindsight, this probably was a phone patch related to the Japanese
Prime Minister visiting with Bush.

I'm not sure how it came about, but I seem to recall WOWO Ft. Wayne, IN saying "Westinghouse Owned, Westinghouse Operated".

Wrong, on at least two counts:

WGN: World's Greatest Newspaper (referring to the owner, The Chicago Tribune)
WTIC: referred to owner Traveler's Insurance Company

KFI - "farm information". The station originally had a fair amount of
agricultural reporting. When I listened to it in the 60s it still had a farm
report every morning.

I can't believe that anyone missed WLS, World's Largest Store, Chicago.
It was originally owned by Sears.
Here's Jeff Miller's great site on early call sign meanings.

I believe so. But you probably meant to say "third letter" like the B
in WIBG. Checking my Citizens Radio Call Book vol. 6 (1925), I found
these likely suspects:
KFAB Lincoln, NE
WABI Bangor, ME
WBAP Fort Worth, TX
WBBM Chicago
WCAO Baltimore, MD
WCAU Philadelphia, PA
WCBM Baltimore, MD
WDAF Kansas City, MO
WEAN Providence, RI
WFAA Dallas, TX
WGAL Lancaster, PA
WHAM Rochester, NY
WHAS Louisville, KY
WHBQ Memphis, TN
WJAR Providence, RI
WMAQ Chicago
WNAC Boston, MA
WOAI San Antonio, TX
WQAM Miami, FL
WSAI Cincinnati, OH
WSAR Fall River, MA
and many others that have since gone off the air.

Falun gong, possibly good for meditation or exercise, is run by a certified nut job. Probably found a way to line his pockets with $$$. Great Leader, Li Hongzhi says he aquired supernatural powers while an eight year old. Li Hongzhi says he can levitate and make himself invisible by thinking "no one can see me." Also he claims to control other people's movements by thought and move himself by thought alone.

Dear Jim,

Sorry Jim, I didn't make myself clear. I'm not interested in buying the
radio just now - I want to hear from other users about the construction
quality and consistency and I would like to read some full reviews.

But I am interested in finding out more about the radio and, if you can
post a link to the operation manual here, I would be thankful

It certainly does look interesting (and would be a much more
interesting if the company added a synchronous detection circuit).
Best,

Joe

Shortwave is DEAD. Use your computer to listen to a vast arrray of
radio broadcasts from anywhere in the world. No radio, no antenna, no
static. Shortwave broadcasting is old tech, dying fast.

The worst flag burners are the American Legion. Every year most posts
have a public flag burning ceremony. Old flags are supposed to be
burned in PRIVATE.

It's not dead. Everyone knows about streaming audio on the web, big
deal. Go Troll someplace else.

In Washington, an army official said the suspicion was that two soldiers from the 502nd Infantry Regiment, later seen with blood on their uniforms, had raped a young woman and then one of them had killed her and three of her family, among them a child.

I shot that site myself a few months ago. HFDL is still active there.
Also the Navy 135.95 data signal.

The maritime site mentioned in on the eham website is a few miles down
the road. [Globe Wireless.]

What are you, south of the equator? Summer just started.

I don't have a passport, so I assure you I didn't accompany Limbaugh on
his sex tour. I only learned about Santiago from the net, trying to
figure out why Limbaugh would take N1EB to the island.

Miso,

Honestly consider the 'implication' of your remarks and
the 'repeated' posting of those remarks. This was even
after I posted a reply pointing out the insensitive nature
of the remarks and there potential to be viewed as Racist.
You then topped that off by continued to post them again.

Miso - The Picture You Are Painting Is That Of An Ugly
{ Bigoted /Racist } American. - Who can look down His
Nose - At those Poor Dirty Nasty Foreigners and can not
admit that those same Problems Exist right here in America.

miso - words have meanings and consequences ~ RHF

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast bands used outside the USA. Also includes WARC-92 broadcast band extensions, which may be used before April 1, 2007 on a secondary (non-interference) basis. For multi-use bands, most common usage is shown. Some stations operate outside the official bands. Information is from Sep 2000 NTIA allocations table, see:
http://www.ntia.doc.gov/osmhome/allochrt.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is 5 kHz. Frequencies above 10000 kHz tend to propagate better during the day; frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area. Telephone lines present a potential shock hazard. Do not use this antenna for transmitting. Use at your own risk.

INTRODUCTION

This article describes how to use a phone line as a shortwave receiving antenna. Performance will vary depending on the kind of phone line you have. Overhead lines usually make okay antennas, while underground lines usually don't. A phone line antenna will generally pick up more power line noise than a dedicated antenna, so don't expect to use it for DX work. Nevertheless, I find that it outperforms the telescopic whip antennas built into most portables.

A reader sent in this suggestion: If you're concerned about connecting the phone line directly to the receiver, try wrapping the phone cord several times around the receiver's telescopic whip antenna instead. Performance may not be as good as a direct connection, but it will probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought much about it because thunderstorms are rare in my area. Most phone lines have lightning arrestors on them where they enter the house, but the lightning arrestors may pass enough energy during a lightning strike damage a receiver. My suggestion is to disconnect the antenna when not in use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and receiver. The capacitor eliminates all phone line voltages, including ringing, so that they will not harm the receiver.

```
Phone line RF connector
red .01 uF center cond. / \
or o--------||-----------------------------|-o | To receiver
green \ /
50 ohm coax |
ground |
or o-----------------------------------------+
N.C. shield
```

N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be purchased from some shortwave dealers.

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

By the way, these filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:

```
Phone line RF connector
red -------- center cond. / \
or o----| |-------------------------|-o | To receiver
green | | \ /
| FILTER | 50 ohm coax |
ground | | |
or o----| |----------------------------+
N.C. -------- shield
```

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

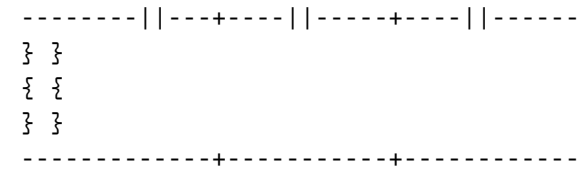
Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)

Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.



The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB
1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

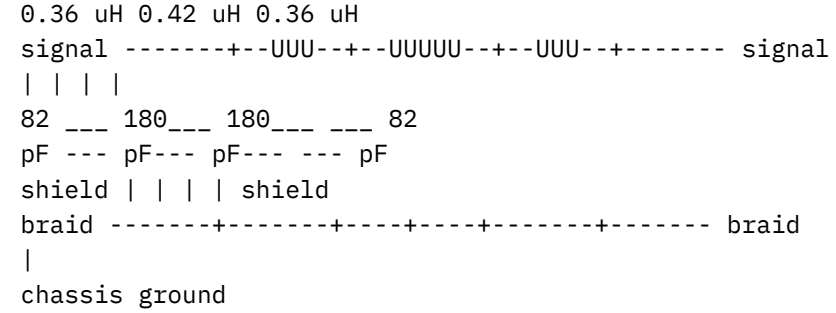
These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date: 22 Apr 92 08:59:33 GMT
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



I had to do a little more improvising at this point. I used .33 uH instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there are 4 lugs plus a grounded lug. All "ground" connections go to the lug that is mounted to the chassis, and the other 4 lugs are used for each of the connections on the signal line. One terminal strip is used per filter. Since both filters were necessary to clean up the hash, I am going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means you can't possibly hook them up backwards. (In the above schematics, left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

All of the parts for the filters can be obtained from the following source:

Digi-Key
http://www.digi-key.com/
701 Brooks Av S
P.O. Box 677
Thief River Falls, MN 56701-0677 USA
Voice: 800-344-4539
FAX: 218-681-3380

PART DIGI-KEY PART NO.
82 pF capacitor P4023
180 pF capacitor P4027
820 pF capacitor P4184
1500 pF capacitor P4187
0.33 uH inductor M8007
0.39 uH inductor M8008
2.7 uH inductor M8018

The cost of these parts is less than $1 each.

That would go a long way towards explaining why there will be a limitless supply of "insurgents".

(Which is to say, viewing the picture of the father with a look of hatred on his face, holding his horribly burned child--well, it's hard to believe he is going to want to line up behind W. It seems more likely he will become yet another "insurgent").

Sounds like you agree we shouldn't tell reporters from the NYT anything
we wouldn't be happy to tell the enemy.

Perhaps the best way to do it is to tell all federal officials and
employees to stop talking to NYT reporters.

It's been on the news all day (including the Pentagon Channel on the AFN
DBS) that one of the participants in this opened up and admitted what
happened during a counseling session regarding the deaths of the soldiers at
the check point. At that point, the trial is pretty much academic, at least
as far as the one that admitted what his participation was. Yes, he'll have
a court martial, with all his rights observed (as well he should), but an
uncoerced confession is pretty damning evidence.

That's all well and good, and if indeed guilty then punished as it should be.

What I really find interesting is that an Iraqi's life seems to be totally worthless unless killed by an
American soldier.

I see no complaints from the 'tard boys in CanaDuh nor from the 'tard boys in the USA (posted here, at
least) about the daily deaths of the Iraqi's who are being slaughtered by either their fellow citizens or
the "insurgents".

The Future Of Radio
Exploring the future of radio and wireless technologies. Edited by
Harry Helms
May 12, 2006

Shortwave Broadcasting Meets Reality

"The era of shortwave radio broadcasting is surely, inexorably drawing
to a close. Even that starstruck eleven year old boy inside me-----the

one enthralled by shortwave radio almost 43 years ago----can see that."

"With the huge decline in tropical stations, DRM splatter in other
areas, religious broadcasters appearing in the 60-90 meter bands,
relays...it is just not the same for me anymore. However, I have
wonderful memories from those years that will never be forgotten."

"Voice of the Andes' Airs Final English Broadcast on SW".

"About 13 years ago, one of our HighText/LLH employees joined the Peace

Corps and was going to be posted to Botswana. My going-away present to

her was a Grundig portable shortwave radio with digital tuning. I even

pre-programmed it with frequencies for the VOA, BBC, Radio South
Africa, etc. In a letter, I asked her how she was enjoying listening
to shortwave. Her reply was a sheepish admission that she never
listened to shortwave; there was too much fading, interference, and the

audio was awful. Instead, she preferred listening to AM and FM, and had

good reception of the local VOA and BBC relays as well as South African

AM stations, especially in the evenings. I don't think her story is unique, even among the permanent residents of Botswana and other areas that we supposedly need to serve by shortwave."

"The decline even from a decade ago is remarkable, and from two decades

ago it is shocking (check through an old copy of World Radio Television

Handbook if you doubt this). There was a time when the 4700 to 5000 kHz range would be filled with broadcasters from Central and South America in the evening hours, African broadcasters in late afternoons and after midnight, and with Pacific and Indonesian stations around dawn. Now you hear more background noise and utility stations in that range than regional and national broadcasters. And where have those listeners gone? Mostly to recently-opened stations on AM and (especially) FM."

Remember folks - "keep thinking positively about your Eaton Shit E1s" !

Africa, etc. In a letter, I asked her how she was enjoying listening
to shortwave. Her reply was a sheepish admission that she never
listened to shortwave; there was too much fading, interference, and the

audio was awful. Instead, she preferred listening to AM and FM, and had

good reception of the local VOA and BBC relays as well as South African

AM stations, especially in the evenings. I don't think her story is unique, even among the permanent residents of Botswana and other areas that we supposedly need to serve by shortwave."

"The decline even from a decade ago is remarkable, and from two decades

ago it is shocking (check through an old copy of World Radio Television

Handbook if you doubt this). There was a time when the 4700 to 5000 kHz range would be filled with broadcasters from Central and South America in the evening hours, African broadcasters in late afternoons and after midnight, and with Pacific and Indonesian stations around dawn. Now you hear more background noise and utility stations in that range than regional and national broadcasters. And where have those listeners gone? Mostly to recently-opened stations on AM and (especially) FM."

Remember folks - "keep thinking positively about your Eaton Shit E1s" !

Birdwatching is dead, why not just look at pictures of birds online.

Oh yeah... a person's hobby
(birdwatching, shortwave, coin collecting etc.)
is fun and exciting to him/her. Not dead
at all, full of life, satisfaction and the thrill of discovery.

What's dead is your mind, and your personality if you have to get
attention/satisfaction by trolling a newsgroup.

Mostly, garbage is being broadcast now - religion and boring news.
Shortwave is
nothing like it used to be. Listening to hams and ultilities is also
boring. More and
more broadcasters are dropping shortwave and going to either the
Internet, or AM.
Once "Voice of the Andes", which I regularly listened to, back in the
1960s and
1970s stopped broadcasting, and the BBC stopped broadcasting to the US,
I knew
shortwave was dead. So, what is the point of plopping down hundreds of
dollars
for new receivers - most receivers are basically the same and get the
same stations.
Why spend $500 for an Eaton Shit E1, when one can spend $65 for a Degen
1103.

Some of us are news junkies and enjoy listening to utilitites. To us
they're not boring at all. Like you, I wouldn't spend $500 for an E1,
but I would happily spend that much or more for a tabletop receiver.

Yay Gravity!! You've actually read my mind. Try getting radio on a
computer somewhere like southern New Mexico. No wifi-, pay through the
nose for dial-up internet, and shakey at best. That VS: $60 for a Kaito
KA1103 that you just turn on. You'll find *something* for sure. Radio
Nederland and CBC *still* put out a good signal. Plus you get the
satisfaction of being *connected* the way people were for the better
part of the 20th century. Still more interesting too than just typing
in yet another URL. There's no fun in that. To the Choir, sorry for
feeding trolls but I still like my shortwaves. Too, shortwave's going
to continue as long as there are parts of the population who can't
afford internet access.

Just my .02 worth.

Just heard Cape Radio on 10780 in contact with King 1, checking comms at 1812.
Switched to 9132 and checked comms there as well.

Shuttle is scheduled to liftoff at 1949.

I'm in Jacksonville and usually I can hear something going on HF or VHF, but I'm unable to today. I know that it's been a while since a shuttle launched. Generally are all of the old posted frequencies still good?

thanks.

No, it's not. I'm hearing more activity on 9132 than on 10780, but am
not sure whether there's activity on 10780 that I'm not hearing. Both
frequencies have quieted down a bit.

FWIW, 11175 was realy cranking yesterday with EAMs. I assume something
is up.

Regarding politics and shortwave, I was listening to Tom Oliphant on
the Al Franken show. Al asked him how he keeps up with the news while
traveling abroard. [He was in the Baltics.] Oliphant said he listens to
the BBC on a shortwave radio.

There is still one important difference. Mr. Big Ears at Echalon doesn't know who you are listening to on the radio but he can observe every web site you log on to on the internet. Do you want Mr Big to know you regularly sign on to InfoWars.com, or some other Bilderberg- defined subversive? Everything you do on the internet is on your permanent record and may be used against you, and activities that were innocent at one time may be reclassified as that of "a person of interest." Until the big black vans with loops on the roof start cruising down your street, radio is still perfectly secure.

Sanjaya,

Actually, this is the only newsgroup that I troll. SW listening used
to be my hobby
back in the 1960s and 1970s, when it was exciting; now, all that is
broadcast is
garbage, and many SW broadcasters have vanished. It is fun to see all
of you spend
hundreds and hundreds of dollars on new receivers (most of which have
the same
functionality and capabilities), out of compulsion, all for a dying
hobby. AM Dxing
is now king, with programs, such as, "Coast-To-Coast AM". IBOC will
never take off,
(and if it does, it won't matter) so AM should always be safe, unlike
SW. Some SW
broadcasters have taken to AM/FM broadcasting, instead. All that is
needed are
inexpensive AM/FM PLL receivers, which are tuned for optimum AM/FM,
unlike SW
receivers, which are tuned for optimum SW reception, not AM/FM.

SW programming sucks !
Modern-day SW receivers are cheap S350 plastic boxes !
Bring back the DX-440 !
The Eaton Shit E1's antenna flops, has cheap plastic knobs that wobble,

no internal ferrite-bar or satellite antennas !
The Eaton Shit E5 is way over-priced, compared to the Degen 1103 !
The Eaton Shit E10 is way over-priced, single-conversion, non-SSB, but
with
fancy IF-shift and antenna trimmer (which doesn't work) switched/knobs
!
The Gundig/Eaton Shit S350 is a low-grade, cheap, plastic box, with
flimsy knobs,
filters that only muffle the audio, drifty, smelly, crappy tuner,
tuning backlash, plastic
speaker grill, and low-resolution display !

The AL and VFW are not burning the flag in Anti-American hate. Liberals
on the other hand try to find a TV news crew that can film the burning and
the liberal main stream media is always happy to accommodate them.

Yes it is - it is pissing you off, nerd boy ! Been to any hamfests,
lately, and if so,
I hope you dressed appropriately !

SW IS DYING ! SW IS DEAD !

Hey, just because you are unable to dress yourself it's no reason to get on others about it.

Same for the fact that for whatever reason you can no longer listen to shortwave.

> SW IS DYING ! SW IS DEAD !

I've a feeling that you'll be dead before SW is dead. Have a nice trip.

Just like the cheap shit S350, it's all about looks/asthestics ! Oh
wow, the
REDRUM has a great handle - boy, that is reason to buy this S350
look-alike
cheap shit receiver ! Does the handle smell, like on the S350 ?

SW IS DYING !
SW IS DEAD !
YOUR HOBBY IS DEAD - YOU MISSED THE BOAT !
SELL YOUR RECEIVERS, WHILE YOU CAN !
YOUR EATON SHITS WILL BE EAT'N DUST !
SW PROGRAMMING SUCKS, UTILITIES ARE BORING !
HAM RADIO IS A DYING HOBBY !
MODERN RECEIVERS ARE CHEAP, OVER-PRICED PLASTIC BOXES !

Maybe you should just give up listening, seems you are getting very
stressed out and it could be bad for your health

> Mostly, garbage is being broadcast now - religion and boring news.

So... GSW you have Morphed into "Grundig_Tecsun_Eton_Garbage_!"

Lets simply say "GTE Garbage" -butt- That would do a disservice
to GTE - So 'your' new short name is simply "Garbage" :o)

Some how from 'your' many, Many. MANY ! GIGO Posts here :
Calling 'you' "Garbage" would seem to be most appropriate [.]

GIGO - Garbage In -and- Garbage Out !
- - - Hey "Garbage" That's You ! :o)

OBTW - "Garbage" there is a whole lot of Paper Wads
around the Trash Can . . . Cause You Ain't Scored Yet ! ~ RHF
{ Now Go "Tote" That Garbage Can -and- Keep On Keeping On ! }
.
.
. .

The same reason why they changed the name of Dept. of War to Dept of
Defense.
Gee, I wonder which president changed that one? - LOL

They would do well to change the name of San Francisco - D'oH!

Most leaks such as these come from high level sources within the government who are disgruntled employees, left-wingers, even spies or have an axe to grind, etc. They certainly know full well what they should not be telling the press. Which makes them all the more guilty to treason.

You wont find this on Shortwave.google it if you want to,Look Around Mississippi with Walt Grayson Sullivan's Hollow.

The program is on channel 3 right now,one of my favorites,if not my most favorite.Sullivan's Hollow got that name before the 1920's because so many Sullivans lived there.One of those Sullivans got the nick name of Wild Bill.Walt Grayson said the worst Earhquakes weren't out West.They were a series of Earthquakes between 1811 and 1812 that rattled the lower forty eight States and Springfield Plantation still shows the worsts damage.They rang Church Bells at Reelfoot Lake,Tennessee.

Hello all:

I have owned a Tecsun PL-350 radio for 9 months but I don't use it
anymore. I dusted it off and put everything in the original box in
order to sell it on eBay. If you're interested, here is the listing:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=120004026145

I wonder why my land line phone rang a couple of times in the last two days? Oh,that's right,I forgot to unplug it a few days ago.My next oldest sister and her hubby are on their way to a Shriners convention in Tampa,Florida.(they are Shriners) Those big shot Shriners steal most of that Shriner money for fancy trips and meals and enterainment.I read about that a few days ago on the internet.

I wonder why that dark Chevrolet SUV with the dark windows with the two antennas (the antennas have coils near the base of them) mounted on the roof was sitting in that parking lot about a block from me at about 12:30 PM this afternoon as I was driving by there on my way to the Goodwill store.I stared at that SUV as I was waiting to cross Highway 80.Then that SUV started moving and went West on Highway 80.I know how to rig up ''something'' (easy as pie) that will stop any vehicles that have electronic ignition systems.They better stay the H... away from me.

154. Degen DE1103 quality variation

Newsgroup: rec.radio.shortwave
Date: 2006-07-02 01:35:44 UTC
From: Vesa <Vesa@nosuch.address.fi>
Message-ID: <44a722e7$0$14357$9b536df3@news.fv.fi>
Source record: 81289

Hi all!

Out of curiosity I purchased 3 DE1103's, plan being to give them away to godchildren etc. Strangely one of the receivers was a poorer performer on FM especially. On FM the frequency display was off by approx. 100kHz.

To remedy the problem I had to take the set apart and adjust the quadrature coil of the FM-detector, T202 in
" http://lab.radioscanner.ru/schematics/de1103_main.jpg ".

Given this opportunity (reason to open the set) I inspected further. Rather surprisingly the circuit board of the radio looked really bad. All the components (SMD included) were soldered by hand! Flux residues were left uncleaned! Shield plates were all corroded and poorly soldered!

I checked the two other units and they were OK meaning they were manufactured in a proper SMD-reflow soldering process. Additionally the tiny screws attaching the main board to back cover were given a locking compound treatment. This prevents the screws becoming loose and rattling inside the set.

Now, the "bad" unit was labelled as "MK2", the OK radios were "MK4". I suspect it could be that with a new PCB-revision Degen subcontracts manufacturing of the radios with the remaining stock of old PCB's instead of scrapping the boards. Alternatively the radios just reflect the variation in chinese "domestic" quality. Hopefully export quality sets are all as shiny inside as in the following picture of an Eton E5:
" http://web303.server-drome.net/Eton_E5/E5_009.jpg ". Incidentally shielding of a "MK4"-set corresponds to that of an E5. My crappy "MK2"-set lacks the shield above the PLL (biggest shield in picture).

In conclusion the situation is rather awkward. It is impossible to tell whether a DE1103 is crap inside by the outside. Buing a "domestic quality" DE1103 from eBay really involves a risk of getting a crap product. One out of three radios was crap for me.

I got a snail mail this morning from that married Irish woman wayyyyyyy
over yonder across the big pond in England.She included five photos of
her and her hubby and her dad and her dad's girlfriend on her fiftieth
birthday last April 22nd.They were out dinking and celebrating her
birthday.She is very,very pretty (eat your hearts out,suckers) and she
also included a check (cheque) for the six Maybelline eye shadow pencils
I sent her a few weeks ago,in British Pounds Sterling.(she said the On
The Rocks Maybellne looks gorgeous on her) Doggy said,Does she really
think you will cash that check? WOO WOO WOOF.(Blueberry doggy,I will
keep her photos,but I already tore that check up)

Ann Coulter is the most anally retentive witch I've ever heard open their mouth. Tancredo's just a bigot, period.

Coulter is of course entitled to her opinions and has the right to voice them.. but I would like to know what sort of childhood she must have had to fill her with so much unmitigated hate.

As much as I hate to add to the noise, I can hardly pass on an opportunity
to say that Ann Coulter is one crazy bitch. The reality that there is
someone, not only more hateful and arrogant than Bill O'Reilly, but twice as
ignorant, is very disconcerting.

==========
The allegation of the March rape and slayings came to light in a
battlefield stress counselling session for members of the platoon, when
two soldiers raised the issue.

Neither soldier said they witnessed the alleged killings, but said they
had overheard conversations about them from fellow soldiers.

Officials said the woman's body apparently was burned after the alleged
killings.

> those treasonous liberal communist cunts? Do we have to deport you
> too?

No, he's a bigot because he's a bigot, and apparently so are you, since you seem to think that anything not white is a cesspool. And for your information, you're a lot closer to treasonous than I will ever be. It is not now, nor has it ever been, illegal to be a communist in the United States (and no, I'm not a communist, and though I have liberal stands on some issues, I have very conservative stands on others). Furthermore, my ancestors were on the continent most likely thousands of years before yours.

For your further information, I don't believe in unfettered immigration, either. I can, though, understand how desperate people would be driven to cross into a more prosperous country to try to make a living and feed their families. This doesn't make it legal. They should go about proper immigration procedures. That being said...

1) I believe that putting up a fence along the entire southern border sets a bad precedent, and makes us look like a totalitarian regime to the rest of the world.

2) Though they ARE in the country illegally, SOME thought does need to be given as to how to best deal with the 12 million who are already within our borders. Because:
a) It would be nigh onto impossible to locate every one of them, let alone deport them.
b) Even if we could locate and deport them, it would be a huge setback to the US economy, because we would lose all the money being spent by those 12 million people. This would not be inconsequential, as it amounts to billions of dollars each year.
c) Add to b) above that, regardless of the protestations by some, many of the jobs done by the illegal immigrants (primarily agricultural) would not be picked up by others in our society. I can speak from practical experience on this issue, since I was for a couple years in my teens an agro worker in Utah, and was, in point of fact, the only person in the fields

with any caucasian blood in my veins. There were no other locals even trying to get those jobs, they would rather mow lawns, or snivel because they had no money. It's damn hard work, and not many will do it for the price that the farmers are willing to pay (or even CAN pay... just think of what the price of your food would go up to if farmers had to pay all their labor minimum wage).

Face it, most of us (Americans) are all for instant gratification, and are no longer willing to REALLY work and earn what we get anymore. We have no work ethic left. I can't blame the average American for being this way, though.. since we all learn it right from the top, where COO's and CEO's can run their companies into the ground and still get "golden parachute" deals worth millions of dollars, all at our expense.

steps down off the soapbox

Hi all,

I recently bought a yaesu vr-500. Yesterday I had to change the batteries and, from that moment, the radio only makes a repeated sound "blop" while it flashes the low battery sign. The radio doesn't respond to any button pressed. It just keeps repeating the sound and blinking the low battery sign. I am sure the batteries new batteries are good (I already tried several new ones).

Any ideas?

Thanks in advance

Rui V.

Armed with your discovery, you should contact the ebay seller you dealt with. If it was Liypn or Tqchina, let them know about this problem and I'm sure they in turn will contact the manufacturer directly for an explanation. Both of these sellers are conscientious and very good to deal with.

Given the expense of returning substandard electronics back to China for warranty replacement, the seller and manufacturer should BOTH make a coordinated effort to ensure overseas sales do not include substandard units predisposed to failure.

Two of the three radios I bought from one of these sellers had to be shipped back for warranty replacement. The DE1103 had to be sent back upon receipt because the LCD display and the sound was bad. The replacement DE1103 had cosmetic flaws but it worked OK. The DE1107 worked very well, but the LCD clock didn't display after several months of use. I thought there may have been a loose connection inside so I asked if it was OK to open up the case for inspection. The radio appeared clean inside and all the ribbon wire connections were secure. I got a DE1107 replacement a couple of months ago and it's perfect. The third radio I bought that didn't fail is a Tecsun BCL3000. The tuning knob isn't as smooth as I would like -- it's a little stiff at some points, and then moves very freely at other points. Other than that it works just as I expected (knock on wood).

Your observations merit further investigation and I hope you post any developments to this group..

> Why do you care, I thought you were selling, not buying.

You've got to remember that you were trying to sell an R7 for what was it? $1800 or so? and that included an MS7 speaker that goes for $75 and up these days. R7's, for whatever reason, do not seem to fetch the prices the R7A's get (which is beyond me, as I've pointed out before they are the same radio, albeit without a couple of easily added options).

I'm fairly certain that one could have a fully loaded R7 (all 5 filter positions filled), NB installed, and toss in the AUX7 board to boot and it still would not reach the price of a standard out of the factory R7A which comes with the 2.3, .5 and what they call an AM filter (which is ONLY a wire soldered across a position on the filter board) and the NB.

My first R7 was purchased new out of AES in Cleveland (former home of the fake Hispanic known as 'David Eduardo', by the way!) for $1000 and only had the 2.3 filter installed (and it came in the factory sealed box with an R7A manual).

Since then I think I'm on my 5th R7 and I've never paid more than $675-700 for one. Most had all the filter positions filled, and I always yanked the CW filters out, put in voice filters and also rearranged the filters so that they went in logical order via the bandswitch. It's also advisable when putting voice filters in the CW positions to disconnect the additional amplification that is used on the CW filter positions (a 2 wire unsoldering job).

The one currently in use here has the 8,6,4,3 and 2.3 filters installed.

Since they are both garbage, get another hobby, and stop wasting your money on modern-day cheap plastic box receivers ! AM DXing beats SW DXing, anytime !

And some people knock some people who shop at Goodwill stores. (or similar thrift stores) Pam,a regular shopper at the Goodwill store,she once told me,Huh Larry,buy this $44.00 shirt.(two dollars for the shirt,I paid) A couple of days later,I was driving along and I flicked a cigarette butt out the window.The wind blew that cigarette butt up my left old ugly armpit.It ruined that $44.00 shirt.

```
NASA Vessels up on 5711 kHz USB
-------------------------------

It is Sunday 10:09am EDT (1409z).
The NASA SRB recovery vessels "Liberty Star" and "Freedom Star" are
up on 5711 kHz USB, in comms with Cape Radio. Cape Radio tried to QSY
them to HF freq 9132, but even though I heard both sides well, Cape
Radio could not hear them. It seemed like the vessels could hear Cape
Radio, however.
Unfortunately with the weather here so bad, it is doubtful the
STS-121 launch will take place today, so the Liberty Star and Freedom
Star will have to wait another day to retrieve solid rocket boosters.
They feel like The Butcher does when I toss his frisbee and it gets
caught high in a tree.

I wonder how much I could auction my ex-old girlfriends off for?
About eleven years ago,when I was paying for some books at Waldenbooks
book store at Metrocenter Mall,those two sweet elderly women who worked
there (they were only joking,of course) asked me would I give twenty
five cents for that nienteen year old (brunette,dark eyes,extremley cute
gal) girl that was helping them with the books.I told the young
woman,Honey,I dont think I could do you any good.

==========
The Americans entered the home, separated three family members from the woman, then raped her and set fire to her body, the official said. The three others were also slain. A senior Army official who also requested anonymity because the investigation is ongoing said one of the victims was a child .

==========

Every citizen with morals in the US should be using July 4th to write their Congressman, urging them to end the abomination that Washington is committing in their name in Iraq and Afghanistan.

In fact, all taxpayer funding to EVERY middle Eastern country should be stopped. Their politicians all make money by continuing the strife. The funding seems to be continuing mainly due to very healthy kickbacks to the US supporters, mainly in Congress.

Hi all,

I recently bought a yaesu vr-500. Yesterday I had to change the
batteries and, from that moment, the radio only makes a repeated sound
"blop" while it flashes the low battery sign. The radio doesn't respond
to any button pressed. It just keeps repeating the sound and blinking
the low battery sign. I am sure the batteries new batteries are good (I
already tried several new ones).

Any ideas?

Thanks in advance

Rui V.

Are any of the batteries in backwards ? k35454.

OK Rayburn I was the seller of the Drake R7A that you are downgrading.
My pictures did not reflect what this radio actually looks like. Why
didn't you ask me a couple of questions before you blasted me. This
radio mght not be a 10 but it is for sure a 9.8 and nowhere near a 7.
I have no doubt that my not professional pictures hurt my auction but
the guy that bought it asked me questions and in the end got a great
deal.

Please watch what you say on these newsgroups you know the posts are
almost forever and usually if anyone does a net search will find out
more about you then you might want them to know.

So at least the buyer and me the seller and happy campers. I have more
almost MINT Drake gear that I will be selling in the future and expect
not to see any negative postings from you until at least after you
contact me first.

I believe my radio would have gone higher but the 4th of July weekend
and maybe my pictures stopped it form doing so. You comment might have
been a factor also.

Have a good day ,
Ron WA0KDS

No true to any of this There is no scatching or hazing on the face
only poor lighting and some reflections. No worn corners and no VFO
scratches only dust and reflections.

Next time people before you post a negative comment to this group think
first and then ask the seller questions.

Thanks
Ron

PS: Rayburn lets see some pictures taken of your 10 plus R7A. Or in
other words lets see how good of photographer you are.

I would consult your owner's manual for the reset procedure. It's
going to be different than that for my R-10.

Although, with some radios, if you took the batteries out, and left
them out overnight, you may accomplish the same thing.

The reset procedure implies pushing some buttons.
The radio does not response to any button :(

In that case, remove the batteries, and leave them out overnight, and try again in the morning.

There should be one button, usually hidden, sometimes in the battery compartment, sometimes behind a pinhole in the grille as on my R-10, that's specifically for Reset. There is likely a simple prodedure for activating it. And the radio need not be functional for to execute the procedure. That's the reason for the Reset procedure.

I found the Yaesu VR 500 Manual on line. To reset the system,

1) Turn the radio OFF.

2) Press and hold the [FUNCTION] and [MONI(LOCK)] keys while turning
the radio ON.

3) Press [1(MEMO)] key.

4) Press [ENT(SET)] to reset all settings to their factory defaults.

That should return you to functionality.

US-based Radio Station Jammed in Zimbabwe
- - - June 30, 2006 - Edition 4
http://www.thestar.co.za/index.php?fArticleId=3318217
Harare - A Washington-based Radio Station Broadcasting
into Zimbabwe has confirmed that there has been some
jamming of its signal.

President Robert Mugabe's Zimbabwe Government
is hostile to foreign-based news organisations.

Under Zimbabwe's tough media laws, only Four Radio
Channels and a Single Television Channel, all of which
are controlled by the Mugabe's Government, are allowed
to operate inside the Country.

If anything is a thing of the past, it is AM DX'ing (much to my chagrin).
With more and more stations testing IBOC at night, it won't be long now
before all you hear on the AM band at night will be IBOC hash. :(

Wrong ! Tests of IBOC have little to no affect on AM Dxing. Plus, the
digital part of the transmission fades, over long distances, so it will
NOT affect AM Dxing ! Too bad !

Hey dumbass, the links are:

http://www.rwonline.com/reference-room/iboc/04_rw_am_iboc_6.shtml
http://beradio.com/mag/radio_readers_speak/

Even if sold to the public (which it won't be), IBOC is useless during
nighttime propagation, so it will not affect nighttime AM DXing:

· The Ibiquity IBOC-AM system will be unusable during nighttime AM
broadcasting as skywave reception will render their digital signal
useless in many areas.

· The AM broadcast band should remain analog indefinitely, as a
legacy or heritage radio service for the American public. Not only are
there hundreds of millions of AM receivers in use, but more
importantly, in times of crisis or emergency, an analog AM receiver
(crystal radio) can be constructed from just four common electronic
items (ferrite antenna, diode, tuning capacitor, earphone) providing
emergency reception.

· Night time AM IBOC remains problematic, at this time, because the
wide signals required combined with night-time AM propagation introduce
more noise than can be reasonably tolerated on existing analog gear.

· The total radiated power, for IBOC transmission, is typically 1/100th of the total analog power. A 25Kw AM station would only be transmitting 250watts of IBOC information, for example.

It is you who is wrong. A friend of mine, Pat Martin, of Seaside, OR, a
leader in AM DX with thousands of QSL's from all over the world (all from AM
band stations) reports that KGO AM in San Francisco has started testing IBOC
at night, and he can no longer hear anything but IBOC hash on 800 and
820KHz, and that when they kick in their IBOC, the audio quality of the AM
part of their signal deteriorates dramatically. In addition, another friend
in New York City reports that at least two stations in that city are testing
IBOC at night and that DX of stations either side of those is now impossible
while IBOC is running. I don't know where you get your information about the
digital sidebands of IBOC fading, but it is most certainly erroneous. IBOC
will fade no more than a standard AM signal over the same path.

Hey dumbass, the links are:

http://www.rwonline.com/reference-room/iboc/04_rw_am_iboc_6.shtml
http://beradio.com/mag/radio_readers_speak/

Ooooh... IBOC shills... I'm impressed.

• The Ibiquity IBOC-AM system will be unusable during nighttime AM broadcasting as skywave reception will render their digital signal useless in many areas.

Then why is iBiquity pushing so hard (along with their shills, Clear Channel) for nightttime operation of IBOC? Why are more and more stations doing nighttime testing of IBOC. I know of at least 15 stations that are testing at night, some even leave the signal on all night long.

• The AM broadcast band should remain analog indefinitely, as a legacy or heritage radio service for the American public. Not only are there hundreds of millions of AM receivers in use, but more importantly, in times of crisis or emergency, an analog AM receiver (crystal radio) can be constructed from just four common electronic

items (ferrite antenna, diode, tuning capacitor, earphone) providing emergency reception.

• Night time AM IBOC remains problematic, at this time, because the wide signals required combined with night-time AM propagation introduce more noise than can be reasonably tolerated on existing analog gear.

My point exactly... IBOC DOES interfere with AM Analog signals, both day and night. And much more so at night when skywave propagation makes even local reception more difficult.

I found the Yaesu VR 500 Manual on line. To reset the system,

1) Turn the radio OFF.

2) Press and hold the [FUNCTION] and [MONI(LOCK)] keys while turning
the radio ON.

3) Press [1(MEMO)] key.

4) Press [ENT(SET)] to reset all settings to their factory defaults.

That should return you to functionality.

Is there any possibility that, when the original "low battery" signal
came on, the batteries were OK but the radio needed to be
reset ? k35454.

How many stations are testing HD at night? I have only heard of a couple of
very specific tests, such as the WLW and WOR skywave test a few years ago.

Daytime, night time, anytime... IBOC = QRM

Now Eddy, you fake little Hispanic, take your little HD/IBOC dog and pony show somewhere else!

So, you are saying the articles, plus many others I have rad, are wrong
? Sorry, it is YOU that is wrong ! IBOC does not propagate long

distances, so it will not affect AM DXing, plus the digital poart is
only 1/100,as strong as, the analog part. YOU are wrong !

WNYC 820
WCBS 880
in NYC, both have done all night testing.

KGO 810 in S.F.

KEX 1190 in Portland, OR (I can't verify that one at the moment, will ask
for verification later.) That's certainly more than one or two stations, and
I suspect there are a lot more doing testing than just these.

KFI was randomly assigned the calls very early on. They created their own
meaning from their programming. The same owner, Earle C. Anthony, also had
KECA, his initials, and now KABC. Anthony was a major Cadillac and Packard
dealer in the Southland.

Call letters are assigned by the FCC but usually from a list of preferences submitted by by the license applicant. Stations try to choose call letters that mean something or can be said to stand for something. Try KICY in Nome Alaska or KVI in Seattle (The transmitter is on an island in Puget Sound - Vashon Island).

Other than the fact that the FCC issues 4 letter calls (with some special exceptions for grandfathering) stations can ask for any unassigned call. West of the Mississippi they start with K. East of the Mississippi they begin with W. (Again with certain grandfathering exceptions)

Prefixes for the US include W, K, A, and N. Note that all aircraft in US registry have tail numbers that begin with N.

Anyone care to guess what the call letters HCJB, the pioneer shortwave station in Quito Ecuador were chosen to mean?

Dave Olson
Broadcast Engineer

If I'm correct in my recollection, WIBG started out as a "religious" station - with the letters standing for "I Believe in God." Later, of course, it became Philadelphia's top rock and roll station. The 990 kHz frequency in Philadelphia is home again to a "religious" station.

I've been a broadcast engineer for many years. I've been a ham operator for many more than that. Anyone who knows anything at all about the physics of radio propagation knows that everything within the power bandwidth of a signal will attain the same reach as any one part of the signal. Whether or not it is listenable to a human is non-sequitur. Even if you were correct about the power being only 1/100th of the carrier power, it will still be present at any locus where the carrier itself is present. And even if it's not listenable, it will still cause interference, ESPECIALLY to an AM signal. Even a signal 1/1000th of the level of a local signal can still interfere with the local signal.

I am talking about AM Dxing (long distance), where the digital portion
would have dropped off long ago, because it is so weak - it would not
interfere. Here are professional test results, off Radio Magazine:

http://beradio.com/features/radio_running_interference/index.html

Even these tests were done at relatively close ranges, where the
digital portion would still be captured, and the IBOC signal did not
make the analog portion objectionable. IBOC will have to sell the
public on digital radio, requiring tens and tens of millions of analog
AM/FM radios to be replaced by expensive (i.e., $200) digital radios -
this is not going to happen (any idiot can see this). Plus, one of the
points of nighttime AM broadcasting is to reach a wide audience, which
the digital portion would not. AM broadcasters would not be willing to
give up a large portion of their audiience for digital radio. Even in
Brenda Anne's supposed (but non-professional) example, Oregon is only a
few hundred miles from San Francisco, and not considered AM Dxing.
Also, that person's test receiver may be wide-banded, where a
narrow-banded receiver would not be affected, as much.
Any interference from the digital portion, would be at relatively close

ranges only, and not affect AM DXing !

Honey,

These articles are written by professionals, not some single-minded
SW geek, moaning about the dying hobby of SW listening ! I get my
information about the digital sidebands fading from the articles, idiot
! Try reading a few ! The digital sideband are only 1/100, as stong
as, the analog portion, so they fade ! Da !

If laughing was your true interest, you'd not be telling us to stop.
You'd be seeking to insure your long term future entertainment.

But you seem to be quite upset about it. Which suggests another
purpose.

HD is not allowed at night (with a minor exception in deep winter months),
and there is little reason to test at night something that is totally legal
in daytime hours.
```

On rare occasions.
>
> KGO 810 in S.F.

Same... occasional testing, mostly due to the installation of the new Nautel
50 kw transmitter 10 days ago. Testing after midnight is legal, including

for daytimers at full power... which causes vastly mor einterference than an occasional HD test.
>
> KEX 1190 in Portland, OR (I can't verify that one at the moment, will ask

> and I suspect there are a lot more doing testing than just these.

As I said, there is no ongoing testing. There is occasional testing just as there is for daytimers, etc., in the test hours after midnight.

he is upset about because (like Ham radio) he is upset that things are
changing and so the hobby he wants to freeze everything is indeed dying

it burns him that others simply don't it as dying but changing

indeed in the HAM radio world you do in fact have people threatening
murder over the coming changes (thankfully the folks doing so are so
unstable as be only realy dangerous to themselves)

If it's not allowed at night, then why is testing at night underway on
several stations. And furthermore, why in heaven's name would they allow it
at night "in deep winter months"? Winter is the time when MW skywaves work
best, and it would cause the MOST problems, not the least.

328. AM/MW IBOC = Listen Local -or- Hear Hash !

"Garbage" {little gigo} - Stop reading articles -and-
Start Listening to the Radio.

Radio - It's About Listening and Your Ears Don't Lie [.]

As BAD pointed out the adjacent Channels on each side
of an IBOC Radio Station are becoming Digital-Hash-Land
and DXing many of these Frequencies is a thing of the past.

IBOC AM/MW Radio Broadcasting is great for the 'local'
Radio Stations because it reduces and eliminates most
Out-of-Area Radio Listening opportunities; and potentially
increases the number of listeners for the "Locals".
- - - AM/MW IBOC = Listen Local -or- Hear Hash !

yes it is that simple ~ RHF

Unfortunately, the when I insert the batteries the radio does not
"respond" to ANY button. Not even the power button. When the batteries
are inserted it starts immediately to produce that repeated sound and
blinking the low battery sign.

332. Need 1 to 4MHz capture/analysis on a budget

Newsgroup: rec.radio.shortwave
Date: 2006-07-03 09:47:10 UTC
From: lars121@gmail.com
Message-ID: <1151920030.253462.214310@h44g2000cwa.googlegroups.com>
Source record: 81418

Anyone have a suggestion for an affordable solution for capture and
analysis
of 570Hz - 4MHz signal?
Specifically, the application is one which uses a HAM radio transciever
utilizing approx 20W-100W power and a Class E transmitter to drive
data signals and power from an external coil to a series of smaller
receiver coils which are implanted in biological tissue for biomedical
application. Trying to stay on budget, so expansion card or device
interfacing with PC is preferable to having to expense a HAM rig. Many
thanks. -Lars

I did that. No batteries overnight. No result.

I also inspected the radio trying to find a reset button...nothing.
Maybe it's inside it, but I wouldn't like to open because of the
warranty (and also because I am not sure there is a reset button
inside).

So, still lost :(

But thanking for your trying to help. I do need ideas...

Even though your batteries are presumably new, did you test them (preferably with a tester that puts them under load)? There is a small chance one of the cells is defective. A long shot, but after testing them, you will have at least eliminated a possibility.

It wouldn't be anyplace that requires opening the case to get at.

> So, still lost :(
>
> But thanking for your trying to help. I do need ideas...

Do you have the AC adaptor for it? If so, does it do the same thing
with a better power source?

Also, which type of batteries have you installed. Alkalines will
produce a significantly higher voltage than NiCads, or NiMH, cells, and
some radios don't tolerate the lower voltage.

If you're not getting the same result on the AC adaptor, and you're
using NiMH or NiCads, then you're radio doesn't tolerate them. Shouldn't
be an issue, but sometimes it is. May require service to correct. IF the
radio works with the AC adaptor but not when you're using alkaline
cells, then you've got a weak cell, and you need to replace it.

If you're still getting the same results with the A/C adaptor or with
a new set of Alkalines, it's time to send it back to Yaesu.

http://www.thenewamerican.com/birchblog/index.php

One of the fundamental conceits of the totalitarian mind-set is that reality itself must yield to the demands of the Party's ideology ï¿½ and that mind-set is well-represented in the GOP-aligned Right. From there it's but a few goose-steps to the conclusion that those who persist on interpreting reality without the supposed benefit of the official ideology really should be killed.

The FCC has banned digital radio transmissions, at night, because of
sky-wave propagation problems. So, with that in mind, it will never
become a reality, at night.
Digital radio will never become a reality, anyway, because the vast
majority of the population is not going to spend $200 on digital FM/AM
radios. There are millions of analog AM/FM radios, in existence, that
will have to be backwards-compatible. IF it ever materialized, it will
not affect AM DXing, because the digital portion is only transmitted
with 1/100 of the strength of the analog portion, and with
skywave-propagation problems, will not affect AM DXing.

RadioIntel doesn't know everything pertaining to Radios.
Now,it is true that I have said before that I think that radio is too much money for the amount of bread,and I stand by what I said.(maybe I am a cheapskate) So is a Rolls Royce/Bentley and Mercedes Benz too much money for the amount of bread.

I have read before many years ago in auto magazines that many of those Mercedes Benz cars imported from Germany had to be worked on and straightened out some bugs,right here in America,before they could be sold to the customers.Back in the early 1940's,there was a Rolls Royce factory here in America and that American factory was building Rolls Royce cars with more reliability than the factory in Limeyland was.Do some real research on that and y'all will see I am right,as usual.

I don't care how much money people spend (their own money) for whatever kinds of radios and I don't knock them for that either.More power to them is what I say.

>From RadioIntel.com:

Conclusions
Many enthusiasts are waiting to hear whether or not The E1 "blows away" the Satellit 800, or vice versa, or if it diminishes the "legend" status of the Sony 2010. Some early owners have already made such claims. The reality is a bit more mundane than that. The fact is that these are all excellent radios, so the possibility that one could "blow the other one away" is unlikely. Indeed, modern radios have so far pushed the envelope of what is possible that only incremental improvements are likely. Such is the case here. So if you're looking for me to say the E1 trashes all the competition you are going to be disappointed.

Conclusions
Many enthusiasts are waiting to hear whether or not The E1 "blows away"

the Satellit 800, or vice versa, or if it diminishes the "legend"
status of the Sony 2010. Some early owners have already made such
claims. The reality is a bit more mundane than that. The fact is that
these are all excellent radios, so the possibility that one could "blow

the other one away" is unlikely. Indeed, modern radios have so far
pushed the envelope of what is possible that only incremental
improvements are likely. Such is the case here. So if you're looking
for me to say the E1 trashes all the competition you are going to be
disappointed.

382. Shortwave Transmitter Site Archive - Update

Newsgroup: rec.radio.shortwave
Date: 2006-07-03 14:46:32 UTC
From: shortwavesites@gmail.com
Message-ID: <1151937992.475392.147860@75g2000cwc.googlegroups.com>
Source record: 81517

Hi Folks,

NEWS UPDATE FROM: The Shortwave Transmitter Site Archive/Database (Free Yahoo Group). See it listed in Yahoo Groups.

The latest updates to the CURRENT & EXTINCT Excel files have been uploaded & are now available for you to download at your leisure.

CHANGES for 2006.
1. I have updated most of the entries for the station users of the Current SW
TXer Sites.
2. I have included a NEW 'Logging' TICK field "L" for users to tick (if they
wish to print out their own copies) OR for users to post their own BOXED TICK Wingding Font
character into the spreadsheet. You can find an example of a 'Boxed Tick' at the bottom of the
AFRICA spreadsheet.
3. Re above I have deleted by own TICKS from the verification BOX field.
Unfortunately in haste I have forgotten to delete my own QSL date data in the 'QSL Date' field. But users can delete that.
4. There have been several updates to site data in both the CURRENT & EXTINCT files.
5. More notes have been added & in the future there will be more alternate names or spellings of transmitter sites & reference to each so we all know which sites are which etc. I know there has been alot of confusion of multiple names & references all to the same site, which is confusing to the dxer. Hopefully through the resources of the united global DX community we will resolve in quick time the confusion that exists out there.
6. In future there will be an expansion of the new Latitude/longitude geo-coordinate data. The format will be compatable with Google Earth so users can cut & paste the
data into Google Earth & see the shortwave site of their desire.

There still REMAINS a HUGE amount of data to be churned through in both files. I
simply don't have enough time & resources to do it all on my own, hence I will need
your assistance & the assistance of the global Shortwave community to assist with the
reporting of errors & the supply of information to get these files into good shape.

I beleive this is a worthwhile project & have been supported well by a couple of
you to date. Thank you for your assistance.

These files will be continously updated, but only uploaded once every 4 - 8
weeks or so. I don't wish to bother you all with constant updates & messages.

Anyway drop us a line anytime:
If you like what I'm doing.
If you know someone who would like to help with this project
If you can assist in anyway. Eg. Donations, error reporting, news, tranmission antenna
photos etc

Membership is FREE. To subscribe send an email to: shortwavesites (@) gmail.com

Prospective members should be aware that both Excel files are still in what I would term draft status. Your assistance can change that & thus assist other dxers with their enjoyment of our great hobby.

Regards

Ian
AUSTRALIA.

If you look at the ratings for any American rated market, there is no measurable listening to our of market stations across the country. In fact, of 13,500 stations, less that 400 showed up in ratings outside the home market. And, usually when this happens it is in a contiguous market, such as many LA stations showing up in Riverside / San Bernardino... which is "behind" the mountain where the major LA FMs have their antennas, and, thus, has a local signal.

The amount of increase for the local stations were NO listening to outside stations reported would be just about zero.

I feel very sorry for people who place the symbol of freedom higher
than the freedom it represents. I would never burn the flag - it is
too dear a symbol, after all - but the legal right to burn it is what
makes it the symbol that it is. Without that right, it is merely a
garish piece of cloth, a paper tiger.

Youy're spewing a lot of unsubstantiated assumptions. Could it be that you're simply projecting your own weaknesses and thoughts? Hmmm. I thought so.

Frank From Queens is still a fucking asshole, and your childish responses do nothing to refute that fact. If you had any enlightened response, you probably would have attempted to share it. Seeing as you do not, we assume that you have nothing but hate and venom in what's left of your rotten brain.

I am at a loss as to your logic here - the anology is somewhat sideways
- but I will play along...

The Bald Eagle is an animal, and a grand one at that. In many
respects, it is on roughly the same plane as chickens and turkeys, both
of which are, likewise, animals and birds, and both of which are noble
creatures who exhibit many fine qualities to those willing to watch
them for awhile.

The eagle also happens to be a USA symbol, and an excellent one at
that. In its life and form it rightly reflects the best aspects of
America - its common-man majesty, strength and freedom.

They all have my respect.

Looks like the answer is "no".

From http://www.msnbc.msn.com/id/13666974/

NASA spokesman Dean Acosta said fixing the crack on the pad could take "days, to longer than that."
Another possibility might be to fly with the crack as is, but Acosta told MSNBC.com "I don't think
that an option."

It *is* a paper tiger if you deny to anyone the freedom it represents.

I honor that flag and fly it proudly, and under its banner defend the right of anyone to verbally or symbolically express themselves as they see fit, no matter how offensive that expression may be to others, including myself. Short of physical harm to others or their property, of course. It is the birthright of every American, and the true right of all humans, regardless of what autocratic government may happen to oppress them.

SWL is a loser hobby !
SWL is a dead horse - you all missed the boat !
SW receivers are cheap, over-priced plastic boxes !
Eaton Shit E1 is no better than the 800, or 2010 !
SW listeners are loser nerds !
Go hide in your ham shacks !
60 and 90 meter tropical bands have emptied out !
BBC no longer broadcasts to North America !
"Voice of the Andes" is gone !
AM DXing lives on !
IBOC does not affect AM DXing !
IBOC will never fly !
You all are losers, with a loser hobby !
You all are 30 years too late, but I wasn't !
I know what it used to be like !
DRM will render your receivers useless !
DRM will render the Eaton Shit E1 useless !
Go find another hobby, losers !

SWL is dying !
SWL is dead !
But I'm not cry'n !
For you nerd heads !

See Bruce, that's the difference between people like you and people like me.
I consider the flag as sacred as life itself. And you'll never understand
that.

You are right - I never will understand it. I don't place symbols above their meanings in importance. The flag is a piece of cloth that represents what is *really* sacred as life itself. It is a great symbol, but at the end of the day a symbol only. The freedoms and rights are the heart of it all, not the flag. I will never understand how you, or anyone else, can so confuse what is truly basic and fundamentally important - such as your and my right to disagree - and what is best described as a convenient way to express affection for those rights.

Another group that severely mixed up the perceived meaning of their symbol and what it really stood for was (still is?) the Ku Klux Klan. Be aware that I am no way comparing the KKK or its philosophy to you or anyone on this newsgroup - that is not the point at at all. They do, however, get a kick out of burning crosses, the most sacred symbol of their religion, on the front yards of those they perceive as being inferior. No, it is not a perfect analogy at all, but it likewise represents a distortion, in the minds of the people committing the act, of what the symbol represents and the real basis for belief. As I said, I would not burn the flag, nor certainly a cross, to press any point I wanted to make...neither would make sense nor, I believe, win any converts, and neither act would represent my own beliefs. I simply believe that, regardless of the flag, what really counts at the end of everything is whether or not we preserve our system of government and its basis. As long as *it* lasts, whether the flag flies or does not fly is irrelevant. The Nation and its Constitution is what matters, and is the system we use even where Old Glory is absent.

I used to believe just as you do on the subject but there seems to be a
plague of Aholes running around thinking that just because they live in a

free democracy, it's all right to shit on anything and everything. Fuck them! If you burn the flag in front of me, you had better do it and run like a mother fucker. Sorry.

Hello DxAce, RHF, Brian, Telemon, cuhulin, mike maghakian, and other contributers!

Anyone hear any pirates or anything else worth tuning into today? All my usual ham bands seem to be dead but it looks like 11m is open, so I would assume 10m is as well, but I don't hear any hams - just beacons.

Happy 4th!

- Matt

Ratings are BS. In Los Angeles, how many people are required to make
a 0.1? Are you willing to tell this many people they don't deserve
to be able to listen to the radio because they live more than 40 miles
from the downtown post office?

I do believe that there is a place in Hell reserved for the people who perpetuate this atrocity - and the Flag of Canada flies over it.

Having said that, there are plenty of atrocities against Nature and critters that people in the US commit as well, so there are glass houses to go around.

Hi Matt. It is the holiday so I'll bet the house that they'll be out in full force. Solar condition are quite good too. I logged the following in the last couple days:

Crystal Ship
Mac SW
WMPR
GZR
Radio PigMeat

DE - I understand the Numbers and the Marketing Model.
-and- That is "WHY" AM/MW IBOC makes Cents for the
AM/MW Broadcasting Industry and Good Public Policy
for the FCC ~ RHF
{I don't need to like it - To understand it.}
- - - AM/MW IBOC = Listen Local -or- Hear Hash !

Count the Number of Monthly Post Here on RRS
Now -IF- Each Post was done by and Individual
AM/MW DX'er (About 3,000)

-and- -IF- There were a Hundred Times (100X) that
many AM/MW DX'ers in the USA. (300,000)

Out of a Popularion of 300,000,000 Million that is
only about 0.1% { We Are Nothing - NOTHING ! }

Hey Brian. Nice web site by the way, musician/tech person here as well! I just scanned through the 6.9xx area I didn't find anything right now. I kept tuning and somehow landed on 9.385, which is Brother Stair. I'll check back when I can. I'm still having power company noise problems and have learned a few tricks that can make hamming possible (not enjoyable), but I'm thinking about upgrading to either an R5000 or an Icom - IC-706MKIIG so I can transmit. Either way, it looks like it would easier to get a reciever with DSP than fight the local power mongols.

I'm really leaning to the IC-706MKIIG to get best of both HAM and SWL worlds, since I really enjoy both and that seems to be an economical solution.

I'll post the pirates(and anything else good) when I hear 'em!

- Matt

I just don't understand this IBOC technology. You have to buy a new
radio to use the digital part anyway so why not pick another band to
use the improved digital technology without the analog component?

During a few listening sessions, I have noticed that when I can hear the television turn on in the apartment below me, local interference becomes much louder. Have any of you dealt with this issue in the past? Which component generates the interference - the wiring, the cable box, or the television? What remedies can I propose to my neighbors?

I'm using portable radios (Sony ICF SW7600GR, Eton E5, Kaito 1102) with the whip antennas, and typically the antennas are oriented horizontally.

- F Y I - For One and All,

Shortwave and DX Listening WebPages from the Google Directory
http://directory.google.com/Top/Recreation/Radio/Shortwave_and_DX_Listening/

- Note-About-The - "Open Directory Project"
DMOZ => http://dmoz.org/about.html

* Web -controlled Shortwave Receivers - http://www.dxtuners.com
A network of web-controlled SW receivers around the world. Tune the
receivers with your browser for live audio.
* The Listening Post - Shortwave -
http://www.chilton.com/scripts/radio/R8-receiver
Interactive web-controlled Drake R-8 allows 5 and 30 second live sound
bites, details of last 25 frequencies selected by listeners, and
information about tuning controls.
* DXing.com - http://www.dxing.com/
Compendium of radio monitoring information, including general
beginner's information, international broadcasting news, and resources
to monitoring hobbyists of all stripes, including ham radio.
* Spy Centre - http://www.spynumbers.com/
A resource for information about Shortwave Spy Number Stations.
* Radio Portal - http://www.radio-portal.org/
Interactive search engine for HAM radio operators and shortwave
listeners. Offers information on all frequency ranges from VLF to UHF.
* On The Shortwaves - http://www.ontheshortwaves.com/
Devoted to the history of shortwave radio. Features early radio
articles, book reviews, and other references for DXers and collectors.
* The Overcomer - http://www.overcomerministry.org
International broadcast of prophecy. Includes shortwave, satellite and
live internet broadcasting.
* HFCC - High Frequency Co-ordination Committee - http://www.hfcc.org
Co-ordinates transmission schedules of about 60 organizations from more
than 30 countries.
* Save the BBC World Service - http://saveBBC.org
Website of listeners who are opposed by the decision by the BBC World
Service to end shortwave broadcasting to North America, Australia and
New Zealand in July 2001.
* European Gospel Shortwave Radio - http://www.egradio.org
Shortwave Gospel radio resource with schedules, frequencies and links.
* AsiaWaves - http://www.asiawaves.net
Directory and frequency listings of radio and television stations in
South and Southeast Asia.
* Tropical Radio Stations -
http://194.252.88.3/rswebpri.nsf/sivut/tropical.html

Comprehensive List of Tropical Band Stations. Comments in Finnish.
* DX Antwerp - http://www.dx-antwerp.com
A Flemish association Of SWL enthusiasts. Features club information, photos, logs, and DX bulletins. [English]
* TRS - http://trsc.com/
SWL information, frequencies, propagation data, DX events, QSL gallery, downloads and links.
* Amateur Radio World-Wide - NW7US - http://www.hfradio.org/
HF radio propagation, operation, equipment, as well as amateur (HAM) radio in general, and also a large collection of SWL, Shortwave and DXing resources.
* WTS - Where's That Station? - http://www.dobe.com/wts/
Windows based receiving utility for mediumwave DXers. Includes software overview and screen shots, downloads, online support, DXing resources and contact information.
* Intereval Signals Archive - http://www.intervalsignals.net
Interval signals, signature tunes, and identification announcements from international, domestic, and clandestine radio stations around the world. Requires Realplayer G2.
* Shortwave Listeners Service - http://people.zeelandnet.nl/cor19vs/
Shortwave frequency guides, NAVTEX schedules, callsign database and modification information on the JRC-NRD515.
* DX Band-1TV and Band-2 Radio - http://www.g4fbz.freeserve.co.uk
Band-1 TV and Band-2 FM radio reception via tropo, meteor scatter and sporadic E.
* Coastal Radio - http://www.coastalradio.org.uk/
Worldwide marine and coastal radio information, including frequency lists, logs, and links to live audio.
* Spy Number Stations - http://home.freeuk.com/spook007
Numbers stations, shortwave spy stations, spooks, Russian KGB and The Lincolnshire Poacher, among others.
* IntervalSignal Database - http://www.intervalsignals.org/html/e_index.html
Interval signals, jingles, and station announcements of national and international shortwave radio stations.
* Shortwave Monitoring Station - http://www.fading.de/
Resource for SWL enthusiasts features comprehensive information, reception tips, international broadcasting schedules, plus a QSL gallery, audio recordings, photos and links. [English-German-French]
* Shortwave World Band Listening - http://www.hamuniverse.com/shortwave.html
A guide for shortwave world band radio enthusiasts.
* Universal DX League - http://www.geocities.com/udxl
South Asia-based resource for QSL and club information, plus helpful DX links.
* The DX Home Page - http://dxing.de
>From Klaus-Dieter Scholz, includes DSWCI news, shortwave schedules, station news, radio station addresses, ITU abbreviations list and tips for shortwave newcomers.
* R.L. Drake Virtual Museum - http://www.dproducts.be/Drake_Museum

Presents a Drake online catalog and illustrations covering products
from the 1958 R1-A to the present R8 line, including accessories.
* KA3NRX Shortwave Radio Links -
http://www.angelfire.com/electronic/shortwaveradio/
Links to shortwave radio stations around the world.
* Short Wave Listeners Delight - http://www.ozemail.com.au/~ventmond/
A listing of military and civil HF Frequencies from Australia and
around the world. Includes US DoD(GHFS, MILSAT, MYSTIC STAR), and
RAAF(AOCS).
* International short wave contesting information -
http://www.handrack.net/contest/
A database with rules and results of all international short wave
contests.
* Adelaide CBD - http://www.backpacknuke.com/radio/
Radio stations that can be heard from the Adelaide CBD during daylight
hours on the MF, HF and VHF broadcast radio bands. Includes a channel
and call sign reference for national and international DXers.

You are getting upset, SWL loser ! Get a real hobby - one that is not
dying !

AM DXing shall live forever !
SWL is a dying hobby !
IBOC does not affect AM Dxing !
IBOC will never take off !

Reception has been pretty variable for me during the day lately. Some regions are very good and some poor. Today regional reception has been very good on the 17 MHz band where the other day it was very poor even though the space weather did not indicate any problems.

Australia was weak on the 9 MHz band and they were very good on the 11 MHz band this morning.

Eh - my posting history is what it is. I have always been willing to
state my truthful opinion, and change it when better information comes
in. Can't expect more than that. In any case, for what he responded
to, I have no qualms about my opinion or its justification.

I have read somewhere that a highpass filter (cheap at Radio Shack) placed inline on the offending TV's antenna input may, might, help somewhat.

Oh? It will happen. Especially when prices plummet much like electronic calculators, VCR's, CD & DVD players, cell phones and a host of other electronic devices. At which point the only type of AM/FM radio you will be able to buy will be an IBOC radio. Kiss your analog radio goodbye. Much like analog only UHF/VHF scanners are soon to be extinct.

BTW, If you need a VCR better buy one soon.

Just laughing at all you nerd balls, chasing a dying hobby ! AM DXing is forever, and IBOC will never happen ! DRM will render all of your analog receivers useless ! The SW bands are emptying out - 60 and 90 meter tropical bands, BBC, Voice of the Andes, to name a few ! You all missed the boat - I didn't ! Now, go back into your ham shack !

From what I can figure, it's the picture tube. At least that's been my
experience. Insufficient sheilding of cheap electronics.

It might help to move to a different electrical outlet. Or to a
different place in your apartment. Or perhaps trying battery
operation, off the power grid. Or moving your antenna.

> Wrong, loser !

HD, when on the air (6 AM to 6 PM or sunrise to sunset, whichever gives longer hours) obliterates the adjacent channels for reception of analog or digital channels, and even covers second adjacents if you are near enough or the transmitter is powerful enough.

Broadcasters have made a choice to not serve fringe and non-primary signal listeners in order to implement AM HD. There is a knowing sacrifice, but most broadcasters on AM derive no revenue from out of market listening, so there is no monetary loss... but a big signal loss.

If HD is approved in some fashion for night use, such as a lower "mix" of digital signal at night, it will still ruin adjacent channel reception in a wide area.

> from the downtown post office?

A 0.1 is below the level "reported" by Arbitron. Minimum reporting levels are around a 0.3 which means significant mentions in a range of about 12 diaries. That would be projected to mean about 15,000 people out of nearly 11 million persons 12+ in LA.

Ratings are not BS, as they are intended to help ad buyers put a value on what they purchase. For that use, they are as accurate as needed, whether you like them or not. Ratings are not intended to provide any benefit to the listener... it is only Americans' obcession with Top 10 lists that makes this stuff be published in the newspapers and such.

Considering that any "viable" LA station has a cume of over a half-million, any facility that can not get into 10 diaries is generally not going to survive as a commercial, non-commerical or out of market signal.

The fact is, there is only minimal listening to out of market stations. The reason is double... first, most stations make no effort to serve outside the home market. Second, the US allocation system uses relatively low power levels and many markets are bigger than many of the local signals can

cover... without even considering out of market listening. The FCC originally dreamed up low power levels to force stations to be local and to allow every community to have one or more stations. Unfortunately, the model was devised well before urban sprawl essentially castrated many US stations.

511. (OT) The US Flag and The US Constitution Two Symbols that are Intertwined in the Hearts and Minds of Those Who Love Tem Both !

BpnJ,

We who would defend the Flag will come over and Paint
your House Red-White-and-Blue ! -and- Gladly stand aside
when the Left-Wing Rabble all come by to Burn-it-Down !

Often They {Symbols and Words} Are Intertwined in the
Hearts and Minds of Those Who Love Them Both : Clearly
-if- the Liberals and Invent the Concept of Hate Speech
- Then the More Moderate Members of Our American
Society can Stand-Up for the Very Real Acts of Hate and
Defiance by Those Who's Sole Existence is To Destroy
America the Land That They Love.

BpnJ - The US Constitution is just a bunch of Words -but-
It is a Symbol of the Promise of America's Freedoms !
- - - So you would be all for the Enlightened Liberals
and Left-Wing Wacko Radicals to be able to go to
Washington DC and Burn the US Constitution as an
Act of Freedom of Speech ! - NOT !

I Say : God {Allah} Bless America -and-
Our All American Symbols - Amen !

Symbols Like Words Have Meaning - Think About It ~ RHF

The "NEW" Democratic Party high-jacked by
Left-wingers/Liberals/"Progressives"/Socialists/Communists.

Please explain you logic? Where did I say they were "conservative"?
You take a Great Leap from patriotic Democrates to Conservatives.

Well, well, I'm glad to hear that Conservatives are looked upon as Patriots.

Excuse me? Your logic is most specious. There is nothing in my statement
that says anything about anyone confessing and being set free. And how is it
"left wing/Liberal/Progressive logic" that an accused has a right to a trail
(this is a part of both our Constitution and of the Uniform Code of Military
Justice)? Or perhaps you are talking about how an uncoerced confession is
perhaps NOT damning evidence?

The FCC rules concerning the implementation of IBOC, from RWonline:

"Interference - In the interest of striking a balance between
interference concerns and the strong interest of maximizing coverage,
we adopted in the DAB R&O a three-pronged approach to the issue of
primary sideband power levels for AM. ... When interference problems
are anticipated prior to commencement of interim IBOC operations, or
when actual interference occurs, we permit licensees to adjust the
power level of the primary digital subcarriers downward by as much as 6
dB. Licensees are required to notify the commission of any such power
adjustments."

"In cases in which the hybrid AM IBOC operation of one station results
in complaints of actual interference within another station's protected
service contour and the respective licensees are unable to reach
agreement on a voluntary power reduction, we may order power reductions
for the primary digital carriers or, in extreme cases, termination of
interim IBOC operation. In such cases, an affected station may file an
interference complaint with the commission."

"This complaint must describe any test measures used to identify
IBOC-related interference and fully document the extent of such
interference. The Media Bureau is charged with resolving each complaint
within 90 days."

"In the event the bureau fails to issue a decision within 90 days of the date on which a complaint is filed, we held that the interfering station shall reduce immediately its primary digital subcarrier power level by 6 dB."

"We seek comment on whether this complaint process is working, and, if so, whether we should make the process permanent when final IBOC standards are adopted."

"Concern No. 1: IBOC will make all radios in the United States obsolete - There is no mandate to shut off the analog carriers, and your radio (AM or FM) will work just fine with IBOC. This isn't HDTV, where analog carriers have a definitive cut-off date set by the FCC. I listened to WOR(AM), which transmits an IBOC signal, on the analog radio in my car for 14 months before I had an IBOC-capable radio to listen to. This analog radio was far from obsolete."

"So is the listening experience negatively affected by reducing the transmitter analog bandwidth to accommodate AM-IBOC? I believe that the impact is minimal. The listening experience on the vast majority of radios in use may even be improved over today's wider-bandwidth transmission practices when the challenges outlined are worked through carefully.

"We estimate that there are nearly 800 million radio sets in use in the United States."

So, along with (from http://beradio.com/features/radio_running_interference):

"My opinion is that if the IBOC carriers were reduced by 3dB to 6dB for all stations at night, the digital coverage would obviously be reduced, but there would be less effect on the analog signals. Certainly, digital coverage is adequate at night on the WOR signal."

YEA !!
AM DXing is SAFE !!!
SWL is dying - you all missed the boat !!!
DRM will render current analog SW receivers useless !!!
The general population will not discard 800 milion radios, just for IBOC !!!
AM DXing is SAFE !!!

Here, you and I agree. While we don't on the service stations render to listeners outside their primary market, it is a definite that HD does pretty much eliminate the ability to listen to first and second adjacent channels, whether on AM or FM.

This guy who claims that AM DX will not suffer has obviously been doing too much reading and not enough listening. And he is pretty obviously not an AM DXer, or he would have noticed what HD does as well as read about it in AM DX groups and publications.

Instead, he posts that there is no LOCAL interference between WLW and WOR. Of course there is not... they are 500 miles apart, and WOR is directional away from WLW. The issue is what the local implementation of HD will do to the band at whatever place a particular DXer is located, not whether two adjacent channel stations in HD interfere 500 miles from each other.

The interference test in the linked article was conducted almost 52 miles from the IBOC transmitter. Even at that distance, one of WOR's IBOC sidebands interfered with WLW.

"Conversely, when WOR's IBOC carriers were on, and WLW's carrier was 10dB down, the WLW analog signal was rather noisy. It was not bad enough to make me want to tune WLW out, but it was annoying. If WLW's signal decreased to a level of 15dB below that of WOR, the signal was unlistenable."

DE,

IN THE NEXT FEW YEARS :
With a a Few Hundred AM/MW Radio Stations around the
Nation using IBOC the general background Hash will be
low -but- Very noticeable if you are in a local area with an
IBOC Radio Station adjacent to a Distant Radio Station
that becomes difficult or impossible to hear clearly.

IN THE NEXT 5 TO 10 YEARS :
Next with One to Two Thousand AM/MW Radio Stations
spread across the Nation using IBOC the general back
ground Hash will be High -and- Very noticeable if you are
in a local area with several IBOC Radio Stations and most
adjacent channel "Distant" Radio Station become difficult
or impossible to hear clearly.

IN THE NEXT 15 TO 20 YEARS :
Then with Several Thousand AM/MW Radio Stations
completely covering the Nation using IBOC the general
background Hash will be Extremely High -and- Very
Pronounced and AM/MW Radio Listening will limited to
the Local Broadcast Area : Listening to "Distant" Radio
Stations will have become impossible.

555. Remembering White America On July 4th

Newsgroup: rec.radio.shortwave
Date: 2006-07-04 08:10:23 UTC
From: Me <me@my.computer>
Message-ID: <q08ka2d9hvviclss56iuvqobgi1hdcpf7k@4ax.com>
Source record: 81690
Cross-posted to: alt.fan.rush-limbaugh,alt.politics.usa,alt.politics.liberalism,alt.politics.immigration,alt.politics.republicans,rec.radio.shortwave,soc.culture.usa,alt.politics.gw-bush,alt.politics.usa.congress

As we celebrate America's 230th birthday, I want all of you to think back and remember. . . . WHITE America.

You remember "White America," don't you?

You didn't need to lock the doors on your house. You didn't need security bars on your windows.

You didn't need alarms on your car. Everyone knew where the car keys were -- in the car!

Stores didn't need metal gates on the front to protect them.

Banks didn't need bullet proof glass at Teller windows.

Children could go out to play for HOURS at a time and never worry about being beaten, robbed, raped or killed.

You could walk on any street, in any town, at any hour of the day or night in complete safety.

Schools taught real facts, not politically correct bullshit. Students were required to learn, and were sternly disciplined if they made trouble.

Homosexuals practiced their perversion in secret, in shame, and dared not get "in our face" with their sick lifestyle.

We could all get jobs, earn enough to buy a house and live "The American Dream" of giving our children a better life than we had.

Our politicans obeyed our will; our courts applied common sense and none of us was offended to stand together in public and pray.

THAT was "White America."

Sadly, America has changed - and not for the better.

NONE of the things mentioned above are reality today.

Our nation is being invaded by inferior people from inferior cultures who don't learn our language and don't even want to become "Americans."

Our politicans ignore us; our courts ignore things that are actually in our Constitution and find things that aren't in it.

Our nation is waging aggressive wars based upon outright lies.

Our jobs are being sent overseas; we manufacture almost nothing here anymore.

We're told to embrace diversity - which really means anything "not White."

When we see, hear about or suffer violent crime, we're told to be quiet because the criminals are "victims of society", and it is "racist" to prosecute them.

If we say anything about people's bad behavior, we're called "intolerant" or "hateful".

At the ripe old age of 230, America is becoming a third world cesspool.

You know I'm right. You see it happening.

We've seen so much pain on so many faces. We've seen so many dirty things and dirty places. We've had to close our eyes and close our minds to avoid being overwhelmed by all of it.

How did we allow our wonderful White America to slip away from us?

STS-121: Saturday pre-launch activities have begun

It is Sat, 7:34am EDT (1134z).
Range Clearance activities have begun here in the NASA-KSC area, in preparation for the Space Shuttle STS-121 launch planned to take place at 2:38pm EDT (1838z) today.
"USCG Range Control" has been up on 157.075 getting ops and position from various CG assets, including "CG Bear Cove" and "CG Vessel 438."
"CG Station Canaveral" has been up on 157.175, in comms with CG Auxiliary vessels, incl "CG Vessel 2787" and CG Vessel 1747." He is also in comms with "CG Vessel 25442" on 157.15. And he is talking with "CG Cutter Kingfisher" and with "CG Vessel 301" on 157.075.
In addition the Combat Air Patrol is active over KSC. Eglin AFB F-15s "ARROW 45" and "ARROW 46" as well as "Tanker 11" are up with Miami Ctr on 343.7; and they are engaged in air-air comms on 252.0.
At the moment ARROW 46 is getting topped off by Tanker 11.
Lastly "Search 01," one of the NASA UH-1H helos, has just departed Patrick AFB, switching from the tower freq 133.75 to Cape Control freq 133.8, to begin his mission over the Cape.
As for HF comms, there have been test comms on the Solid Rocket Booster ships' freq 5711.

Corrected version:

STS-121: Tuesday pre-launch activities have begun

It is Tues, 7:34am EDT (1134z).
Range Clearance activities have begun here in the NASA-KSC area, in preparation for the Space Shuttle STS-121 launch planned to take place at 2:38pm EDT (1838z) today.
"USCG Range Control" has been up on 157.075 getting ops and position from various CG assets, including "CG Bear Cove" and "CG Vessel 438."
"CG Station Canaveral" has been up on 157.175, in comms with CG Auxiliary vessels, incl "CG Vessel 2787" and CG Vessel 1747." He is also in comms with "CG Vessel 25442" on 157.15. And he is talking with "CG Cutter Kingfisher" and with "CG Vessel 301" on 157.075.
In addition the Combat Air Patrol is active over KSC. Eglin AFB F-15s "ARROW 45" and "ARROW 46" as well as "Tanker 11" are up with Miami Ctr on 343.7; and they are engaged in air-air comms on 252.0.
At the moment ARROW 46 is getting topped off by Tanker 11.
Lastly "Search 01," one of the NASA UH-1H helos, has just departed Patrick AFB, switching from the tower freq 133.75 to Cape Control freq 133.8, to begin his mission over the Cape.
As for HF, there have been test counts and some radio checks on SRB recovery vessel freq 5711 kHz USB.

Screw you David, you are wrong ! IBOC cannot be used at night, because
of sky-wave propagation problems. Yes, the professional articles are
very clear - IBOC has minimal impact on interference, and if it does
interfere, the FCC would shut down that station's IBOC transmission !
There are no IBOC stations broadcasting at night, so how could one
notice any affect, stupid ! Hey dumbass, IBOC wil ONLY interfere,at
local distances, because the digital part does not propagate and is
transmitted at only 1/100 of the analog part ! The articles are very
clear - you are wrong ! AND, IBOC will never take off anyway, because
the public is not going to trash all their analog receivers. Plus,
there are too many technical problems with IBOC:

IBOC is a complete failure:

http://www.wbdhradio.com/html/say_no_to_iboc.html

IBOC has minimal interference:

http://beradio.com/features/radio_running_interference/

Professional data trumps your "real life experience" !

Wrong pick !

When the WLW carrier was 10dB below the WOR carrier and WLW's IBOC carriers were on, I observed some minor noise in the analog WOR signal. By minor I mean that the receiver volume had to be turned up to hear it. If WLW's carrier met or exceeded WOR's carrier level (and WLW exceeded WOR by 10dB at times), the noise level in WOR's signal rose, but it was far from objectionable. Clearly, the WOR analog signal within our 0.5mV contour would be useful.

Conversely, when WOR's IBOC carriers were on, and WLW's carrier was 10dB down, the WLW analog signal was rather noisy. It was not bad enough to make me want to tune WLW out, but it was annoying. If WLW's signal decreased to a level of 15dB below that of WOR, the signal was unlistenable. If, however, WLW's signal level was equal to or exceeded WOR's signal level, the noise was only slightly audible and the analog signal was useable. When the WLW signal was unlistenable and WOR's IBOC carriers went off, the WLW signal was still unlistenable, either because of another station on 700kHz coming in, or the sideband from a station at 690kHz splattering. In general, I would say that it was not

strictly the IBOC carriers that made the signal unlistenable.

That's right ! People aren't going to trash 800 million analog radios, and spend $200 for digital radios ! Good luck to the IBOC stations, to convince the general public to do this ! People don't care enough about AM/FM to spend $200 for a receiver !

It has been mismanaged from the beginning, and is not going to happen:

http://www.wbdhradio.com/html/say_no_to_iboc.html

(2) IBOC is nothing more than a high power cell phone. It will cut out and chop up just like a digital phone. Even worse, and because of the nature of the AM band, digital transmission will not work here. Period. Why the FCC can't see this is baffling.

(3) Digital transmission and RF will not mix. Not to sound old fashioned, but Just like Kahn works and Cquam does not...well, conventional analog works and digital IBOC does not.

THE RACE FOR DIGITAL RADIO IS UPHILL FROM HERE
The starting shot is fired at auction in April
Originally published March 31, 1997
By Steve Behrens

" But lab tests overseen by the National Radio Standards Committee showed
discouraging results for the IBOC systems, which interfered with their host
analog signals and with adjacent channels, and which suffered interference from
analog signals."

"Impartial engineers concluded that all the systems were fatally flawed in
terms of self-interference, co-channel and adjacent-channel interference," says
a knowledgeable public radio engineer."

"That is probably because few will $pend hundred$ for a receiver that has programming no different from the radios they already own!! IBOC will be no different".

AM DXing shall live forever !
SWL is a dying hobby !
60 and 90 meter tropical bands have emptied out !
BBC, "Voice of the Andes", and many others are now gone !
DRM shall render analog SW receivers useless !
IBOC will never happen !
AM DXing shall live forever !

Digital Radio: What is it and how will it affect Radio as we know it
today?

"The total radiated power, for IBOC transmission, is typically 1/100th
of the total analog power. A 25Kw AM station would be transmitting
250watts of IBOC information, for example."

"Night time AM IBOC remains problematic, at this time, because the wide
signals required combined with night-time AM propagation introduce more
noise than can be reasonably tolerated on existing analog gear."

AND LASTLY

"There is the real possibility of AM IBOC not seeing much adoption at
all given the issues. Despite the considerable engineering acumen of
the IBOC team, the case for continued analog AM innovation and
transmission remains strong, particularly given the audio accuracy and
night time broadcast tradeoffs in IBOC. The digital return is minor,
given the heavy AM tradeoffs. There is clear demand for better quality
AM service, but I honestly don't expect IBOC to fit the bill at this
stage. More work needs to be done and analog methods deserve greater
consideration than they are currently being given.

I see no public demand for digital radio, only better radio. Where FM
IBOC is concerned, the technology has strong potential to provide both.
As I wrote above, AM IBOC is doubtful in this regard."

EAT IT - I AM RIGHT, YOU ARE WRONG !!!
AM DXing lives on !!!
SWL is dying !!!
SW tropical bands have emptied out - you all missed the boat, but I
didn't in the 1960s !!!
IBOC is dead !!!
DRM will render your analog SW receivers useless !!!
BBC, "Voice of the Andes", and many others are gone !!!

I DON'T CARE WHAT ANY OF YOU SAY - YOU ARE WRONG !!! IBOC IS DEAD !!!
NOW GO SHED SOME TEARS FOR YOUR DYING SWL HOBBY !!!
SELL YOUR SW RECEIVERS, WHILE YOU CAN !!!
GO HIDE YOUR PITIFUL HEADS IN YOUR LONELY HAM SHACKS !!!
GET THOSE QSL CARDS, WHILE YOU CAN - NOBODY CARES WHAT YOU HAVE !!!
MY HOBBY LIVES ON - YOURS IS DYING - SWL IS DYING !!!

>the whip antennas, and typically the antennas are oriented horizontally.

Usually, it's the horizontal scan circuits, which also double as
a large part of the power supply. This usually shows up as a noise
peak at twice the scan rate. For older TVs, about every 31.5 kHz.
(And if a TV is tuned to a dead channel and is only getting snow (and
doesn't go blue screen), it will put random noise over all the bands).

Since these circuits are dealing with several 10s of watts and have
a lot of short pulse waveforms and high voltages, there's not too
much hope. You could try a loop antenna.

Because the European Eureka [some number] system uses common
broadband (multi-station) transmitters and provides twice as many
"stations" in the same bandwidth.

In other words, it levels the playing field and allows more channels.
Something that the NAB just couldn't allow. The current US broadcasting
system relies on the selective advantage that comes from the ownership
of transmitters at favorable sites and their licensed monopoly of
a frequency in an area.

> Screw you David, you are wrong ! IBOC cannot be used at night, because
> of sky-wave propagation problems.

There are no skywave propagation problems with HD. And even if there were, nobody cares as 99.9% of US AM stations do not care about thier skywave signal as they get no listening and no revenue from it.

> Yes, the professional articles are
> very clear - IBOC has minimal impact on interference, and if it does
> interfere, the FCC would shut down that station's IBOC transmission !

HD creates additional sideband energy that obliterates the adjacent channels in the local coverage areas of the originating station, and, in most cases, obliterates the second adjacent as well... in other words, two channels on either side.

In Burubank, CA, about 30 miles from the KFI site (prior to the tower incident) 620, 630, 650 and 660 were totally useless on a variety of receivers, ranging from consumer clock radios to an R75 and an R8B.

Even further from KTNQ, and to the edge of its major lobe, IBOC destroys 1010 and 1030 all the time, and 1000 and 1040 have noise, too, although it can be nulled.

> There are no IBOC stations broadcasting at night, so how could one
> notice any affect, stupid !

The rules allow operation 6 AM to 6 PM or sunrise to sunset, whichever allows greater on air hours. That means HD stations in more northern lattitudes in the winter months are on for as much as 4 total night hours with HD.

In any case, the interference is LOCAL and based on GROUNDWAVE interference abetween the HD station and other stations on adjacent and next adjacent channels, none of which are received by skywave.

While I see it a minimal loss based on actual listening (very few listen to out of market AMs on groundwave OR skywave), the fact is that ther eis HUGE interference to adjacents, day or night, in the area around an HD staitons. This area varies depending on the power, frequency and conductivity of the station and area.

> Hey dumbass, IBOC wil ONLY interfere,at
> local distances, because the digital part does not propagate and is
> transmitted at only 1/100 of the analog part !

There are DX reports of HD signals at great distances. And the HD sideband energy is enough to cause severe interference to adjacent and next adjacents far from the HD transmitter. If DXers decades ago got 50 watt Australian stations in New York, it can be seen that a small amount of AM skywave is cvery capable of inflicting great interference.

> The articles are very
> clear - you are wrong ! AND, IBOC will never take off anyway, because
> the public is not going to trash all their analog receivers.

FM stereo took about 8 years to "take off" and it was, like HD, backwards compatible with existing radios.

The public will buy radios if the sound and programming are better, just as they discarded cassettes for CDs.

> Plus,
> there are too many technical problems with IBOC:

There are not technical problems with HD. It works fine.
>
> IBOC is a complete failure:

HD just started rolling out its consumer campaign about 90 days ago in several markets. It is just starting. There are over 1000 HD stations on the air, and the major broadcasters have committed to nearly 3000 stations in the next 3 years. These stations will provide HD service to about 95% of Americans, most with multiple choices and HD-2 channels to select from.

My "real life experience" consists of over 25 HD stations operating now, with another 10 being installed over the next 6 months... iuncluding 5 HD equipped stations at my home office (KSCA, KLVE, 50 kw KTNQ, KRCD and KRCV). You, on the other hand, have probably never used tens of thousands of dollars of measurement equipment to back up your statements with actual facts.

HD is backwards compatible. No existing radios need be trashed. And the new
2.0 design spec radios are not even shipping, but will be out in about
September, timed with a huge industry ad campaign.

Funny... the usable digital signal range of KTNQ in LA is greater than the
usable analog range. Digital works just fine. It is an issue of waiting for
the consumer receivers at a reasonable price point.

Your rant about HD effecting the analog signal is incorrect. There is no
negative effect. And HD FM will essentially double the available program
offerings on that band in each HD enabled market.

Can't you at least come up with some new responses? The awful canned ones
you pull out for everyone from those who like R-75's to Canadians are
growing very stale. Are you really Cuhulin with a different e-mail account?

The line break wrapping will break the link in the thread depending on
its length since every reply adds another > indent to the line.
Bracketing the link with <Link> stops this from happening.

You might still have to fix additional warped lines in a link every time
you reply. I have my news reader set to change the text color depending
on what it represents. Plain text is black, links are blue, email
address red, replied text is green. It's easy to spot the broken links
because part of them will be black and part blue.

Just one benefit of using a dedicated news reader. There are free ones
around so you don't have to pay for them.

Digital Radio: What is it and how will it affect Radio as we know it
today?

"The total radiated power, for IBOC transmission, is typically 1/100th
of the total analog power. A 25Kw AM station would be transmitting
250watts of IBOC information, for example."

"Night time AM IBOC remains problematic, at this time, because the wide

signals required combined with night-time AM propagation introduce more

noise than can be reasonably tolerated on existing analog gear."

AND LASTLY

"There is the real possibility of AM IBOC not seeing much adoption at
all given the issues. Despite the considerable engineering acumen of
the IBOC team, the case for continued analog AM innovation and
transmission remains strong, particularly given the audio accuracy and
night time broadcast tradeoffs in IBOC. The digital return is minor,

given the heavy AM tradeoffs. There is clear demand for better quality AM service, but I honestly don't expect IBOC to fit the bill at this stage. More work needs to be done and analog methods deserve greater consideration than they are currently being given.

I see no public demand for digital radio, only better radio. Where FM IBOC is concerned, the technology has strong potential to provide both.

As I wrote above, AM IBOC is doubtful in this regard."

THE EXPERTS HAVE SPOKEN !
IBOC FOR AM WILL NEVER MATERIALIZE, ESPECIALLY NIGHTTIME AM !
YOU WILL NOT CHANGE MY MIND !
IBOC IS ONLY 1/100 OF THE ANALOG POWER, SO CANNOT INTERFERE FOR DXING !
FCC RULES WILL SHUT DOWN THE INTERFERING IBOC TRANSMITTER !
SEE ABOVE, IDIOTS - CAN'T YOU ALL READ !
MY DECISION STANDS !
SWL IS A LOSER HOBBY - THE SW BANDS ARE EMPTYING OUT !
AM DXING SHALL REMAIN KING !
TOO MANY TECHNICAL PROBLEMS FOR IBOC TO MATERIALIZE !

IBOC AM Broadcasting Is a Complete Failure !

You would have to be a total dunce to think that a digitally modulated
signal would not propagate sky-wave. This is so stupid I can't believe
someone posted it. Why bother responding to crap like this?

Read what the experts have said about skywave propagation of digitally modulated signals ! The experts have spoken ! The digital portion is onlyt 1/100 as strong as the analog portion ! Now, don't get too upset you all ! I am right - you are wrong ! Can't you read, dumbass ! You didn't post the whole article, look at the rest of it ! AM IBOC is a total failure ! It will never materialize:

http://www.wbdhradio.com/html/say_no_to_iboc.html

(2) IBOC is nothing more than a high power cell phone. It will cut out and chop up just like a digital phone. Even worse, and because of the

nature of the AM band, digital transmission will not work here. Period.
Why the FCC can't see this is baffling.

(3) Digital transmission and RF will not mix. Not to sound old
fashioned, but Just like Kahn works and Cquam does not...well,
conventional analog works and digital IBOC does not.

You are SWL losers !
Your hobby is dying !
AM DXing shall live on !
DRM will render analog SW receivers useless !
Sell you SW receivers, while you can !
The 60 and 90 meter tropical bands, and others, have emptied out !
SWL is a thing-of-the-past !
AM IBOC will never materialize !
AM DXing shall remain king !
"Coast of Coast AM", is king !
"Coast of Coast AM", depends on AM DXing !
"Coast of Coast AM", continues to grow !

As my fine friend stated:

"Nothing left on shortwave except third world toilet countries,
religious creeps, skinheads Nazis, communist propaganda and those
weirdo's on WBCQ. Great listening!"

Thousands of AM statrions will remain online, and the numbers are
growing !

You are SWL losers !
Your hobby is dying !
AM DXing shall live on !

YOU are wrong - I am right !
SWL is a loser hobby !
Sell your SW receivers, while you can !
DRM will render SW receivers useless !
AM DXing shall live on !
AM IBOC will not happen !

You little antagonistic bitches have OCD'ed on your cheapo plastic
receivers ! Anytime, you hear something negative about your cheapo
plastic receivers, here comes the whipping ! Little bitches !!!

SWL is dying, and AM Dxing shall live on !
AM IBOC will never materialize !
DRM shall render your analog SW receivers useless !
Suckers !!!

I used to listen to WHAM, located in Rochester, NY all the time at night out here in CA.
(They used to play hard jazz all night.) Came in strong most nights, on some nights there was occasional fading.

I don't own any cheap plastic receivers but I see nothing wrong with
them. They work just fine for signals broadcast to the target area in
normal propagation conditions and they make fine starter radios for

people trying out the hobby.

What a pathetic post. Maybe you need to go to summer school to keep yourself occupied.

I did that to see if you found a hyphen important enough to write again...
this is now about the fifth time you get bent outta' shape over a friggin'
hyphen.

To make my post correct, I stenciled a tiny hyphen between the R and the 75
on my R-75.

You are an ignorant fool with no knowledge of propagation, radio or
broadcasting. That expalins why nothing you post is correct.

> Technically, IBOC does not work for AM skywave propagation !!!
>
Explain that to the DXers who have heard HD digital signals over great
distance. In fact, DRM is a digital system that depends on skywave
propagation... the difference is that DRM does not leave an analog signal.
HD is simply an analog and digital signal on a single frequency... and lower
power signals can and do interfere at great distances.

You make it sound like the IBOC signal is on top of the analog signal.
I think it is a stretch to call it a single frequency when the IBOC
sideband sits on top of the analog signal of another radio station
(adjacent channel).

You certainly don't understand the concept of "culture" in any way. Strange, because a Shortwave DXer should grasp this concept.

How many languages are you fluent in? Are you bilingual or polyglot?

Interesting list. I recall getting Air America out of the Fresno on 790
rather than KABC. There is also a station at 550 you can hear in the
bay area.

I check the color alert on NASA AMES TIS on 1700 once in a while, but
you have to hit it before that annoying Mexican station fires up.

Technically, IBOC does not work for AM skywave propagation !!!

http://www.wbdhradio.com/html/say_no_to_iboc.html
http://beradio.com/features/radio_running_interference/

IBOC AM Broadcasting Is a Complete Failure!

Digital Radio: What is it and how will it affect Radio as we know it
today?

"The total radiated power, for IBOC transmission, is typically 1/100th
of the total analog power. A 25Kw AM station would be transmitting
250watts of IBOC information, for example."

"Night time AM IBOC remains problematic, at this time, because the wide

signals required combined with night-time AM propagation introduce more

noise than can be reasonably tolerated on existing analog gear."

AND LASTLY

"There is the real possibility of AM IBOC not seeing much adoption at
all given the issues. Despite the considerable engineering acumen of
the IBOC team, the case for continued analog AM innovation and
transmission remains strong, particularly given the audio accuracy and
night time broadcast tradeoffs in IBOC. The digital return is minor,
given the heavy AM tradeoffs. There is clear demand for better quality
AM service, but I honestly don't expect IBOC to fit the bill at this
stage. More work needs to be done and analog methods deserve greater
consideration than they are currently being given.

I see no public demand for digital radio, only better radio. Where FM
IBOC is concerned, the technology has strong potential to provide both.

As I wrote above, AM IBOC is doubtful in this regard."

From, http://www.dxing.info/articles/iboc.dx

What is your comment on criticism that IBOC is causing severe interference to analog stations on the same and even on adjacent frequencies?

- HD Radio technology is one of the most thoroughly tested broadcast technologies ever developed. We have gone through extensive testing over a four year time frame and have turned those results over to 3rd parties and the US govt (FCC) for review. The FCC has determined that our technology is acceptable for use and does not significantly impact adjacent stations through interference.

no one can reliably say anything of that tinpot country failed or not
since no one realy understands the goals in question

indeeed the prupose of the launch could as easily be to "show" the usa
is blowing smoke over NK ambitions (and wether they suceeded or failed
they are likely to put out the propaganda line)

KFI hasn't been 50 KW for years. They are 25 KW into an 1/8 wave
antenna, the equivalent of 10 KW.

Bad analogy. People replaced cassettes with CD's (and mind you, not all of them, there are millions of cassette tapes still in use to this day) when and because the cassettes finally failed. Radios have a much longer MTBF than a cassette tape.

For the record, I will never be buying an IBOC radio. I rarely listen to LOCAL radio. Once the bands are garbaged up enough with IBOC, I'll just quit listening or move to the internet for all my listening. If I bother with anything besides my own mp3 players. With 10's of thousands of tracks in my library (all LEGAL, we have all the CD's and vinyl to back up every one of them!), I have no need of garbage radio with 20 minutes per hour of commercials and another 15 of DJ patter.

But that's just me.... and perhaps millions of others?

I'm just wondering if an investigation could be launched into the activities of Univision and other Spanish language outlets to determine if they are supporting and/or aiding illegal immigration in any way?

Guess I'll call my Congress critters office in the morning.

We are obviously dealing with a severely technically challenged individual
in this discussion, unless "bitch" is term of the trade for degree of
interference!

My point is that both the digital and the analog signal are tuned at the
same frequency. The spectrum use is the reason why the HD "noise" kills
adjacent channel reception in the coverage area of the HD signal.

Yes, it does. It propagates as any signal, digital or analog, at a given
frequency.

> AM IBOC will not materialize !

Yeah? Tell that to all the AM stations now on the air in HD.

Yep, and the point is HD/IBOC = QRM

Once again, take your HD/IBOC dog and pony show elsewhere.

More like around 18 mon ths, not "years." December 19, 2004 was the date.

>They are 25 KW into an 1/8 wave
> antenna, the equivalent of 10 KW.

That is a bit simplistic. 25 kw is 25 kw, but the shorter radiator is less
efficient. But it is still a 25 kw station, until the new tower is put up at
the same location.

My expereince, and this is supported by RIAA reports int he 80's is that
cassetes were replaced when the hardware reached certain key price points
and whn software was available that was attractive. The secondary cause and
effect was the replacement of cars with CD players with either aftermarket
CD gear or by new cars with factory CDs.
>

An industry survey showed 2005 resulted in one minute less commercial time
compared with 2004. And the 1,200 Clear Channel staitons are running 10
minutes in music shows, emulated by most every other broadcaster in the US.
So you are pretty much off by the double in your uninformed analysis of
commercial radio.
>
> But that's just me.... and perhaps millions of others?

Nope.. No proof of this at all.

Yeah, the news wires are saying the long range missile failed and that two other short range SCUD missiles were fired. At one point it was reported that there was 4 missiles fired. The long range missile might have broke up into two pieces.

As far as I know NHK was first to report on this situation.

Have you considered a career in politics of the GOP flavor? ;-)

Clearly the analog and digital spectrums overlap, but not for the same
station. In fact, prior to IBOC, a station using such bandwidth would
not be in FCC compliance, right?

Have you read my point about trying to simlyfy for a nutcase who obviously
does not get it?
>
> Clearly the analog and digital spectrums overlap, but not for the same
> station. In fact, prior to IBOC, a station using such bandwidth would
> not be in FCC compliance, right?

IBOC does not change the common point antenna current for an HD activated
station. The two components are part, legally, of the same station, just as
the F M stereo subcarrier is part of the FM signal. Unless stations drop
their analog component, then the HD is "part of" and not "separate from" the
signal of the licensed facility. The fact that no license for HD is required
should also be proof.

Before NRSC, many AMs could and did modulate with a full 15kHz fidelity. The
local splatter from these stations often made listening to adjacents and
next adjacents impossible. So, really, nothing has changed.

Then you have no case. No Hispanic broadcaster is engaged in the illegal
crossing of immigrants over the US borders.

Started with a Zenith Trans Oceanic, moved to an SX 99 and then an HQ 180
with Heathkit Q Multiplier along with a Collins 51J4. Couple of pics at
http://www.davidgleason.com/1946-1964-E.htm

Antenna was an air core 30" loop, tuned but not active, on a rotor with
servo controlled tuning, located in the attic of my home.

Google page just gave me a good laugh. I did a search earlier on SCUD
missiles and on the refreshed page the sponsored link on the right was
" SCUD missile, Whatever you're looking for you can get it on eBay."

I sure hope Kim Jong-II does not Google.

It was widely reported in the NRC, and all were seen by many other NRC
members.

I never changed any data on the site about DX.

What part of "on medium wave" do you not understand. My involvement in SW
started with helping the DX Party Line on HCJB in '64 and owning a SW
station in about '66.

Until yesterday, I had not revised the website since 2002. You are as full of it here as you are in other areas.

You would not have a clue about MW DX, anyway.

Start with this one: what was the most widely reported New Zealand MW station in the US in the early 60's? Easiest Australian?

What were the two most easily heard Hawaiians in the eastern US in the same period?

What was the easiest Southern cone South American in 1960 to 1963?

What was the bellwether African in North America in the same period?

How easy a catch was split frequency AFRTS Thule on 1425 in the US?

Which was the easiest British catch in the same period.

If you were in the Northeastern US and started DXing in 1960, your first Montana station was _____. Same again for Idaho. And Wyoming.

And if you'll recall I asked you several questions about that and asked if all were indeed heard in Cleveland and suddenly you stopped responding via email and the info disappeard from your puffed up 'resume'.

Crap, I still wish I had the emails.

LMFAO at the fake.

I have never seen an e-mail from you. The e mail I use to post is a dummy,
and I never do anything but periodically empty it.

I have never, and would never, answer one of your e mails. I doubt I would
read it.

As I said, and my hosting service can verify, that between February 2002 and
this week I had not changed one thing on my website.

And, since my veries were widely seen at NRC and IRCA gatherings and by
local NRC members like Ed Krejny, I have no need to prove anything to
someone who is clueless about MW DX.

And yes, all 2400 (and another roughly 300 reported but never verified) were
from the same address in Cleveland, OH.

In fact, one of the tings I did in 1963 was to obtain hundreds and hundreds of veries for NRC and IRCA members as I hitch hiked through Central America and Colombia. I sat for 2 days and answered over 100 reports at HJED in Cali, for example. Any of the DXers of the time, form Kermit Geary to Ben Dangerfield to Russ Edmonds and Larry Godwin (who saw all my veries in Quito in 1965) can substantiate the validity of them.

In other words, you can not answer ONE of the above simple questions.

Most are like asking, in 1965, what the easiest Ecuadorian SW catch was. It was not Radio Quito 4923, by the way.

Since the site went up in 2002 and then was never changed, that is
surprising

And, if you say you questioned my DX totals, it is AMAZING given your anal
obsession about RX model numbers that you did not see that the Collins in
the picture on the same page was mislabeled, for 5 years, as a 54J-1. It is
amazing that think you are almost psychic insofar as my DX achievements, but
can't spot an incorrect model number on a well known radio of the era.

Sorry, I didn't get my magnifying glass out! And honestly, I've NEVER been interested in Collins gear.

Nice spin, 'tard boy, but I know you've changed several things in your puffed up resume, whether you changed the date on the page or not.

LMFAO at the fake!

Reputable DXers have seen them. I would not go within 100 miles of Holland,
if that is where you are.

Hmm. The best receiver ever made was the R390. Better than any Drake, by the
way.

It is not "puffed up" and is 100% verifiable truth.

You are getting rather frightening. I need to see if there is anything on
the Police records about you in Holland and vicinity.

Nice equipment and a testament to what a tuned loop antenna can do.

Still have any of those receivers?

I have a question about the tuned loop. How was the connection made to
the receivers? Did the antenna have a pick-up loop inside it?

http://www.davidgleason.com/1946-1964-E.htm

Yeah, what's really funny is this:

"In high school, I founded the school paper. This was because
the school had no 10th to 12th grade and began 2expanding"
with my 9th grade group. I founded the paper "because I could."

Now that paper pictured is from 1962 (though you've now tried to erase the 1962
out of it)

What's funny is, you've stated here before that you skipped ahead a few grades.

Now, you were born in 1946, the paper is from 1962 (which would make you 16, or darn near 16 as the paper is from Nov. 1962.

Just what were you doing in the 9th grade (or even 10th grade) at age 16 (this is in Ohio) if you had indeed skipped ahead a few grades?

And just how, I ask again, did you begin "wandering the world." at age 13?

It just don't add up, and my sources in Ohio agree!

Each one was traded up to the next. The 180 stayed in ecuador when I had to
leave during the Junta years.
>
> I have a question about the tuned loop. How was the connection made to
> the receivers? Did the antenna have a pick-up loop inside it?

The loop had one inner winding, which was fed to the receiver. The outer
windings were tuned.

Here is a description of the principles of a later version of the one I
used, perfected by an IRCA member in CA... and using a MOS-FET device.

Principles of the Loop Antenna
A loop antenna is an antenna primarily for the AM broadcast and the Longwave
bands. There are two different types of loop antennas, one is the ferrite
bar (as in your am radio), the other is wound on an air core form. A loop
antenna is very directional. The pickup pattern is shaped like a figure
eight. The loop will allow signals on opposite sides to be received, while
off the sides of the loop the signal will decrease or be nulled out. The
nulling feature will allow you to remove a local station on a frequency and
pick up another on the same frequency by removing the local signal. A loop
may have an amplifier or may not.

Air core loop antennas come in many sizes. The larger the loop the more gain
there is. A small loop will actually lose part of the signal. That is why
most small loops will use an amplifier. There are two ways a loop can be
wound, box or spiral. In the box or solenoid loop the plane of the winding
are wound perpendicular to the diameter of the loop, so each loop is the
same size. In the spiral loop the plane of the windings are wound parallel
with the diameter of the loop, so each loop gets smaller as you wind into
the center of the loop. A loop needs to be able to rotate to null out a
station. And a loop also needs to be able to till from vertical. This also

helps in in nulling of a signal (altazimuth feature).

The number of turns the loop needs is determined by the size of the loop, the frequency range that you want to tune and the value of your tuning capacitor. The larger the loop the fewer turns you will need. A 4 foot loop needs 8 turns and a 2 foot loop needs 18 turns. The capacitor that is used is the standard AM tuning capacitor with a range of 10 to 365 pf. The tuning capacitor is used to tune the loop to the frequency that you want to listen to. When you are tuned in to the frequency the signal will peak. You may not be able to tune the full frequency range that you want to tune. So you will need to use a 2 section capacitor and switch the second section in. (more capacitance)

There are three ways that you can connect your loop to your radio.
One way is not connecting it at all. (This requires a portable radio with a internal loop antenna.) The field of the loop will radiate the peaked signal and you will be able to pick it up with no connection to the radio. You can move the radio around to get the best reception.

You can also direct couple to the loop. This way you connect to each end of the loop and also to the center tap of the loop. Using this method you will need to use it with an amplifier.

The last method is to use a pick up coil. This consists of one turn of wire that is placed inside the loop on the cross arms. This is then connected to the radio. The distance from the main tank coil can be determined by using a pocket radio and moving it inside the loop to find the place were the signal is strongest, and were it peaks sharpest.

In the past loops were made from wood. I have built them and found them to be heavy, clumsy, and flimsy. The mounting system were not very stable. In talking with Mike Bates, he came up with the idea of using PVC to build loops. PVC is easy to cut and because you use PVC molded parts, the loop that you make are is stable. By using PVC cement for some gluing and small nylon screws to connect parts you have no metal parts except the wire and tuning cap to throw the pattern of the loop off. Using PVC it helps to have a drill press, but if a person drills very carefully there should be little problems.

A). Two main types of Loops available 1). Directly Coupled and 2). Indirectly coupled (Transformer coupled) The Directly Coupled Loop has its windings directly attached to an Amplifier. Usually the main Tank Coil (parallel tuned circuit that forms the loop primary) in the loop is grounded at the center of the winding (center tapped), to allow for electrical balancing. The Amplifiers are usually but not always J-FET's, with 2 FET's in a Differential configuration, where the ends of the tank winding go to each FET gate. The Transformer coupled version uses a link winding to couple the signal to the receiver. This version can be amplified or non amplified.

No, the only remaining copy is severely faded. Call the school. Ask when I attended. while I did not make the graduation due to being in Mexico and then Ecuador, I am in the class of '64.

The school started expanding to 10th, 11th and 12th grade with each year, reaching 12th in 1963. Check the school website. The name is on my website.

9th grade is not High school. It is Junior High.

Nice try.

What part of "Vol. II" don't you understand? The paper was founded in 1961.
1962 was Vol II.
>

Nope. Darned near 15. The paper is from late 1961. Done in the semester I
was in the US of that year.
>
> Just what were you doing in the 9th grade (or even 10th grade) at age 16

I was in the 10th grade in 61-62, if I recall. I did 10th in Mexico and
again in Ecuador, where they finally graduated me anyway after doing an
equivalency test.
>
> And just how, I ask again, did you begin "wandering the world." at age 13?

Yep. One semester at least of each year, all of 1963, and 1964 from April
on.
>
> It just don't add up, and my sources in Ohio agree!

Who cares.

I was allowed to graduate in 1964 in Ecuador at a school that allowed me to test for equivalency. I had not even finished 11th grade (5to curso there) but since I had a radio station on the air, they seemed to find it convenient to make sure I was part of the alumni.

I did 10th three times, sort of. Cleveland (partial semester), Mexico (never went to class) and Ecuador (while building HCRM1.) I did not like school. It was pretty boring.

No... get back on track here 'tard boy.

You stated:

"No, the only remaining copy is severely faded. Call the school. Ask when I
attended. while I did not make the graduation due to being in Mexico and
then Ecuador, I am in the class of '64."

Class of '64 at the Hawken School?

Funny, here you state:

In 1964, in a further attempt to finish my next-to-last
year of
High School, I found an opportunity to study in
Guayaquil,
Ecuador. Unfortunately, when I arrived there had just
been a
revolution (which deposed the sitting president, Carlos
Julio
Arosemena Monroy) and schools in Guayaquil were unable to

overcome a muddled bureaucracy and admit a new student,
especially one without the necessary "normal"

prerequisites in
Ecuadorian history and such.
Not wanting to go back to the US, and abandoning the
formal
"exchange" program that got me Ecuador, I traveled to
Quito,
the capital, where I was told greater leeway was granted
to
foreign students in deference to the diplomatic
community. That
was true, and I was accepted at the Colegio Americano
("Americano" refers to "The Americas" and not the United
States of America) where I was introduced to classes
unknown
in Ohio such as Logic and Ethics, as well as practical
ones like
"Redacciï¿½n Comercial" (Business Spanish). All
instruction, of
course, was in Spanish.

That's a shame you had to leave the HQ 180 behind in Ecuador.

Thanks for the information on the loop antenna you used, which was a
tuned loop with a inner (probably one turn) pick up coil to the receiver.

How did you get around as a teenager in central and south America? You
must have traveled with a relative or had contacts to meet in the
various places you stayed prearranged?

At Hawken School. No "The."

I would have graduated in '64 after missing two years. Yes. One I was half year in Guatemala and elsewhere, and the next in Mexico, and a semester of the next in Central America.

Even an idiot can uderstand:

Sorry, can't fool me on that one. I KNOW the paper is from November 1962.
I've seen it on your site many times before. Before you frazzled the picture by
the date!

I don't normally listen to them but they are on many 9 and 11 MHz band
frequencies. I usually notice them on those bands.

Here is the paper showing the date as 1962!

On a PDF of your website:

http://www.davidgleason.com/PDF%20Resume%201960-1963.pdf

Page 3, and it clearly shows 1962

Hurry, change it!

Look at the Volume data on the other side of the masthead. It says Volume
II. If the one on the site is from 1962, then Vol I was from the 1961 school
year.

This is a pretty good example of how you are dilusionary. If something says
"1962" and is "Vol II" then the first volume is the year before.
Comprendes?

The date remains unchanged from when the site was posted. Similarly, the
volume is unchanged. Since this is verifiable with the school (my whole
class had less than 30 students in both sections, so there are not a lot of
records to check), why would I waste time with some Photoshop trick? I would
rather spend my time arguing the difference between and R 75, an R-75 and an
R75.

In fact, I had better do some extensive searches... I may not have had an
HQ-180. Perhaps it was and HQ180 or and HQ 180.

WTFC.

I have never disagreed. That paper is from 1962, and is from Volume II of
the paper. A volume at a school paper corresponds to a school year. Vol II
started in 1962, and ended in 1963.

Vol I, when I founded the paper, began in 1961. Get it?

Why are you focusing on Vol II when the issue, at least to you, is when the paper was founded. As I said, the school has me in its records as I occasionally help the building fund and such... and they know when I attended. You, on the other hand, do not know the difference between Roman numeral I and numeral II.

This is truly the most odd thread I have been in ever. You are insisting that a 2 is a 1, apparently. In your world, I suppose a 2 can be a 4 or an 11 or a 1,348 if you want it to be. But don't bring your insanity here.

So much for stating:

"No, the only remaining copy is severely faded."

Actually you tried to frazzle the date out of the one that exists here http://www.davidgleason.com/1946-1964-E.htm, forgetting that a different PDF version existed!

LMFAO at the fake!

I hate it when parents die. My dad is 85 now and I'm lucky to still have
one parent around. The only thing about him that bothers me is that
he's got more hair than I do.

So, what remains unexplained as of yet is the fact that in 1961 you claim to have been in the 9th grade!

And yet in the past you claim to have been moved ahead a few grades.

As I've said, things just don't add up, and my sources in Ohio confirm that!

A PDF is going to have greater resolution than a 72 dpi screen res j-peg.
That is why I have PDFs of many of the documents on the site, since I would
not want to put 300 dpi renderings of pictures and letters on the page...
the reader can select to download the hi res version if they want.

You don't know much about web design, either.

In any case, 1962 = Volume II
And 1961 = Vol I.

You are making a case about this, when no argument comes from me. This is
like watching a dog chase its own tail.

I was. And before graduation, I did several years several times because I
did not go to class once I hit HS. I was busy traveling or working or both.

The fact is, I put my own radio station on the air at age 17, so I must have
moved a little ahead of the pack.

Spin, spin, spin... just a short while back BOTH versions clearly had 1962 on
them just as plain as can be! UNTIL you frazzled the one out to hide the 1962.

Then you claimed right here it was faded!

Don't bullshit me, boy!

So... how was it you were in 9th grade at 15 after being moved ahead? That would be pretty normal?

You're not making much sense here.

Try putting down in a list just what years and at what age were you in various grades! And, what years you were 'moved ahead'?

Heck, I'm just plain stupid, so you'd best list it out for me so I can see just how it all adds up!

Ah, we have moved from hypen issues to ones of capitalization. i am going to
do an e e cummings immitation and see if you criticize that as well.

>> > Pretty boring, but you sure went to class!
>>
>> No, I hardly ever did.
>
> You're so full of shit it is truly amazing!

No, it is you who are. I hated school, and found lots of pretexts for not
attending. As I said, it was rather boring and routine.

And now I am embarrassed over engaging in this silly discussion. I know who
I am, and everything on my website is independently verifiable. You are just
a mean little man who dislikes nearly everyone. I kinda' wish I had been
born in Toronto: it is North America's most cosmopolitan city, and the
people are nicer and brighter than you... so you could insult me for being
Canadian, too, and I would be your one stop hating center.

Hi, I am seriously considering buying a shortwave receiver, and I want to know what exactly I would find on the air on the east coast of Australia, and how well the Sangean ATS-505 Shortwave Receiver performs. What antenna would I need for this receiver as well?

> >

I don't know chapter and verse like you do (as you are in the biz), but
I know how the FM subcarrier works. It is very benign. I choose not to
listen to SCA, but don't feel like the service has done me harm.

>From the antenna current statement, you are indicating that the power
output of the station hasn't changed. Well, it seems to me if you pump
power in the digital sidebands, then isn't the AM analog signal
reduced? Thus the signal is weaker for the analog crowd. So not only
does IBOC cause QRM, but the desired signal is reduced in power. We all
know the bandwidth is reduced. I don't particularly like the reduce
bandwidth, but it doesn't piss me off as much as the QRM.

A brickwall filter at 10Khz isn't as annoying one at 5Khz because there
is appreciable energy around 5Khz to make the ringing noticeable.
Still, I listen to KFI when in socal and it isn't the end of the world.

Ive got one of those it is a very good radio and you will get a fair bit as well as top notch am/fm reception.I suggest as a start you try www.primetimeshortwave.com for programs schuedule and passport to world band radio book (i know im going to get flamed for this) which is good for beginners but dont trust there schuedule its unreliable (not there fault at all).Ive learnt you do *not* put a homebrew antenna on there other you will bugger up the antenna and if you want one that is plugged in it better be good because ats-505 in built antenna will cut out.

Enjoy!

Yours truly
Adam

761. Radio Australia Schuedule

Newsgroup: rec.radio.shortwave
Date: 2006-07-05 05:14:24 UTC
From: adman32003@gmail.com
Message-ID: <1152076464.801459.158450@b68g2000cwa.googlegroups.com>
Source record: 81995

I complained to radio Australia about its schuedule and about how crappy and confusing it is and i actually got an answer about it! here goes!.

The information provided on our website is for all listeners, not just those who hear
us on shortwave. An increasing number of listeners now hear us via the web, satellite
or via FM frequencies in their own locality - in both Asia and the Pacific. We no longer
consider ourselves to be solely a shortwave broadcaster. This used to be the case up to
about 8 or 10 years ago and it almost resulted in our disappearance from the airwaves.

I believe that FM, satellite and on-line listeners are less likely to relate to UT/GMT
than those who hear us via shortwave. Having said that though I agree with you we should
also have listings in UT/GMT.

I have passed on your comments to the On-Line department who look after our web page.

Thanks again for your email.

Kind Regards,
Roger Broadbent,
Programme Coordinator,
English Service,
Radio Australia,
Melbourne.

Hehe this sounds like the bbc quite alot, satellite/internet and fm still remain out of reach for many people in the Radio Australia target area (hell people might only have one *old* shortwave radio for the whole village), and is a copout of sorts and also there is much room for censorship one "failed" FM transmitter and its bye bye radio Australia (as has happened with the beeb).

Back on topic im glad he is attempting to address the issue at hand and didnt just fob me off.FM will NEVER be an replacement for international broadcasters and i hope they dont see it that way.

Yours truly
Adam

Yours truly

The analogy is like putting coloring in water. the volume of water is the same, but it has a different color. The Analog signal is not reduced any more than the FM analog signal is.

KFI has not been in IBOC since the tower came down in December of 2004.

772. IBOC at night (WABC)

Newsgroup: rec.radio.shortwave
Date: 2006-07-05 08:45:15 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <44AB7C12.1E71@mindspring.com>
Source record: 81807

WABC 770 NYC seems to be running IBOC at night (now 4:30am EDT),
wiping out WJR 760 Detroit listening in Central Ohio, which is
a pretty hefty signal to be wiping out.

Perhaps Falun Gong's outlandish claim didn't meet CNN's journalistic standards? FYI Falun Gong's "Auschwitz" claim have already been debunked:

- US State Dept investigation found Epoch Times NY's allegation not credible:

http://usinfo.state.gov/xarchives/display.html?p=washfile-english&y=2006&m=April&x=20060416141157uhyggep0.5443231&t=livefeeds/wf-latest.html

- The hospital FLG accused is actually a joint-venture with a company affaliated with the Malaysian government. The place is open to public, and Malay officials have visited in previous years:

http://crc.gov.my/clinicalTrial/documents/Proposal/TCM_Stroke%20TrialProtocol%20synopsis.pdf

I've never heard of death camp advertising for foreign investment and official tours. Even Harry Wu of Lao Gai Research, an expert on this and long time critic of the Chinese government, does not believe Falun Gong:

I just checked at 4:50am EDT and couldn't hear any IBOC. I'd like WBBM 780 Chicago to switch theirs on once at night to see how that would sound here. If it's anything like it is in the daytime it'll make a mess.

The FCC has not authorized nighttime IBOC - IBOC is in a state of great turmoil, and is not going to happend, despite what some idiots say:

That analogy doesn't really work, either. Any time you add something to
anything (whether it is matter (water) or energy (radio signal), you add to
it's volume (in the case of IBOC, you add to the total power bandwidth).

Also, I can't speak for the other stations, but according to Pat Martin,
when KGO turns on their IBOC, the AM modulation level drops quite noticably:

"As far as KGO goes, the IBOC sounded terrible. When kicking in the
IBOC, the signal dropped 50% and sounded "flat" no presence, dull...When
the IBOC went off, the normal loud and solid KGO was there. This IBOC is
total suicide for AM radio. Ray was getting tons of calls & e mails
from people. He is no engineer, but said that KGO will even sound
better. I doubt that. I have heard KCBS 740 running IBOC sounds crappy
too. KEX is ok sounding during the day, but of course KGO is testing at
night with skip. But what I heard on KGO, I am not impressed.
KGO may be ending their era of the LOUD signal up and down the coast."

And, to add from the same link:

"As much as I'd like to hear Georgetown basketball games in this
clarity next year, however, I probably won't; FCC regulations prohibit
AM HD broadcasts after dark, lest they interfere with the reception of
distant AM signals."

I rest my case !!!

The digital sidebands are only 1/100 the power of the analog portion.
HD/IBOC is in a state of great turmoil and will not materialize, due to

too many technical difficulties, and lack of interest from the general public:

It doesn't take a rocket scientist to figure out HD/IBOC doesn't work:

http://www.fmqb.com//article.asp?id=184531

782. any JRC NRD-545 users can give advice please?

Newsgroup: rec.radio.shortwave
Date: 2006-07-05 10:30:35 UTC

Source record: 81817

Hi
Just bought a new NRD545 receiver and noticed that the rear panel, near to the wideband antenna socket gets very hot. I have had a lot of rigs in the past and never had one that heats up so much.

Just wondered if any JRC users could tell me if this is normal or could there be a problem with this particular rig? Apart from the heat, there are no other problems and the receiver works great.

Thanks
Mac.

That's certainly not called for in the IBOC spec, and it's not been my
experience with analog reception of IBOC stations.

> "As far as KGO goes, the IBOC sounded terrible. When kicking in the

WLAC, WBBM, WHA, WTMJ, I've not noticed any change in analog coverage.

On receivers with wider IF bandwidth, the IBOC carriers could be
detected as noise and reduce the signal-to-noise ratio of recovered
audio. That could have the appearance of a dropoff in signal strength.

"IBOC radio will go the way of AM stereo. I can almost guarentee it. It's too expensive for consumers (a la DTV), and mostly prohibitively (is that a word?) expensive for smaller broadcasters to put on the air. Considering Ibiquity wants royalty fees for broadcasting the technology (upwards of $30-50k/yr), there's very little benefit there to even think about it. (there are about 3 dozen stations nationwide who had IBOC up and running, and turned it off because it didn't pay for itself). Of course, you can't sell what people can't hear."

Get a life. Neither argument you make about either term is correct,
just one extreme guy's internet opinion that other extremists run with.
If you'd learn to read and reason, you'd see that my argument is
sound, logical, and correct. I admitted the analogy isn't perfect, but
it illustrates the point to anyone with a brainstem...I suggest you
invest in one. Until then, talk to someone who cares about your
gibberish.

FCC regulations permit HD from 6 AM or Sunrise, whichever is earlier to 6 PM
or sunset, whichever is later. There is no specific prohibition for the rest
of the night hours, because that has not been decided on yet. There is a
current LIMITATION, not a specific prohibition.

Of course, as has been pointed out in the ba.broadcast group, the days that people were "hearing" these HD artifacts, KGO did not have HD on the air!

KGO just installed a new Nautel, and is tweaking the processing for it. HD has been off and on, but with no noticeable difference in levels.

Most of today's AM DXers are so anti-radio that they will "hear" anything
that suits thier agenda.

That is our expereince with HD stations in NY, Chicago, LA, Miami, Dallas,
Houston, etc.

I suspect you are right, but I have yet to come across such a receiver, even
in my collection of 50's early transistor radios, several of which had
magnificent audio (and which still work!!!)

The receivers will come down in price as the new design spec devices are
manufactured. The first CD player I bought cost $1,400 and the first VHS
recorder was $895.

Since the marketing for HD has just begun in the last 90 days, that is
bullpucky.

Patrick is in Oregon. Patrick is not in the groudnwave coverage area of KGO.
Patrick is of no interest to KGO as a listener. KGO is interested in the San
Francisco metro, nothing else.
>
> "As far as KGO goes, the IBOC sounded terrible. When kicking in the

KGO has not had HD on for several days. They are working on the new Nautel
50 they put in 10 days ago, and promise traditional KGO audio from it with
HD on as well.

HD is not yet authorized for night operation, although 4:30 AM falls in the
experimental period, so they could be testing.

> HD is not yet authorized for night operation, although 4:30 AM falls in the
> experimental period, so they could be testing.

WABC-77 AM (along with WOR-710 and WFAN-66 AM) shuts down the IBOC down
for the night.

WCBS-88 AM, however is running it 24/7. I guess they're experimenting
interference with WLS-89 AM,Chicago?

WNYC-82 AM was running IBOC day and night for the past month (10,000
watts day, 1000 watts night). The exciter has been off since this past
Friday night, however. As of this morning, it was still shut off.

WADO-1280 AM's exciter has also been off over the weekend. I don't
know what happened this morning, though. Didn't tune in.

So I don't know what's been happening...aside from LOTS of hash in the
daytime.
My Tivoli-Model 1 is now useless on AM in the daytime. Go figure.

I'm still waiting for WINS-1010, WEPN-1050 and WBBR-1130 to go
IBOC...maybe in a few months time? Ditto the regionals (WPAT-AM 93,
WZRC-1480, etc.), although those were playing with IBOC back in 2003
and then shut it off, never to turn it back on.

Salem Broadcasting (WMCA-57 and WWDJ-97 AM) are holding off on IBOC for
now....

I can attest to that. When WFAN, WOR, WCBS, WADO, WNYC and WABC kick
in their IBOC signals, the same thing happens.

The audio on analog also goes totally flat. There's absolutely no
punch. And on WNYC, where the processing is minimal to begin with, it
sometimes seems to get lost in the background hiss (yes, the radio is
on tune).

Also, since the bandwith has been constricted to 5 khz, if you
overprocess the sound, it will start clipping, and you can HEAR it.
WOR suffers from that.

We shall see - many experts disagree with you. There is no
interest/demand for HD/IBOC radio, from the general public. Actually,
many stations have turned off their HD/IBOC equipment, due to listener
complaints and/or interference to other stations !

I am one of the "professionals". The marketing for the consumer began about
90 days ago, with an industry committee coordinating the production and
content.

The HD roll out was very early on revised to be a three step program
starting with (1) getting transmitter manufacturers to offer HD gear and
stations to install, (2) getting HD-2 content on in the largest markets to
be able to offer expanded choices and (3) get new design specs for the
chipset and receivers to manufacturers so that radios can be produced at
attractive price points.

The consumer marketing began just a couple of months ago; any prior
promotion was individual stations doing it on their own.

Like any change, there will be some who disagree. They are very few in number.

> There is no
> interest/demand for HD/IBOC radio, from the general public.

Of course there isn't. The poromotion of HD on a massive scale just began and the 2.0 design spec receivers have not arrived at retail yet.

Keep in mind that in the first 3 years of FM stereo, only about 100 stations converted. It took FM as a band another 8 to 10 years to become economically viable after stereo was introduced, and much had to do with government "forced" regulation. It took 6 years for portable CD players to drop below $200... and that is about $300 in today's dollars.

> Actually,
> many stations have turned off their HD/IBOC equipment, due to listener
> complaints and/or interference to other stations !
>

Name me 10 who have. And that would be 10 out of over 1000 HD stations on the air, and nearly 2000 licensed by iBiquity.

Note: in several cases, HD has not worked with highly directional AMs with high Q phasers and old transmission equipment. That is a management problem, not an HD problem.

Back in 2003, after WOR started IBOC transmissions, two other stations
owned by MRBI (Multicultural Radio Broadcasting) joined the fray.

WPAT-AM 93 fired up IBOC for a bit and then WZRC-1480 did.

The exciters were turned off shortly thereafter. Haven't been turned
on since. Why this is, I don't know. Maybe there are still bugs to be
worked out in the transmitter plants at these two stations?

Here are the ten and your "thousand" on-air is B.S:

http://topazdesigns.com/iboc/station-list.html

I wouldn't expect anything less, from someone who markets sleazy IBOC.
IBOC will die -
there are too many technical problems:

There is only one list that is accurate, and that is from iBiquity. Current
on air count passed 1000 a few weeks ago.

iBiquity runs updates fairly often in Radio world; that is about the best
source. Since the FCC does not update well the HD list, that source is
inaccurate and may reflect notified but non-active installs and there may be
some stations that do not notify as the "rules" are kind of ambiguous.

How would consumers be interested if the marketing to them has just begun literally a few weeks ago? This is a many-year, slow and calculated process.

I find growing interest in HD-2 on FM. This will drive HD, probably. AM will be along for the ride, and it will enhance the values of many AM stations in the process. Still, consumer awareness is below 5%, so there is no way to look at this part of the roll out yet.

That list is woefully out of date, and does not include FMs. In fact, more
than half the AM stations I work with are that are HD operations are
missing...

It is even missing important HD stations like WJR and KGO which are 50 kw
clear channel operations.

Well the hiss and clipping is much more audible on high-fidelity
stereos and table radios, also when you're listening on a good quality
earphone stereo (Walkman) with a good set of earphones (even the Sony
in-ear ones are enough).

Now, when I turn on most of my old 1960s tube radios with the crappy 4"
speakers - like those old clock radios, which make no pretense to being
hi-fi, I don't have that problem. And just like you, I don't notice it
on those little pocket transistor radios. And I have a bunch of those
- old and new.

Sure the sideband hash is still there if the radio drifts off tune.

So...are people supposed to stop listening on high-fidelity radios and
settle for clock-radio audio instead when listening to analog?

Seems kind of bass-aackards to me. :-/

No, I am behind and support what may be a significant factor in radio's
ability to compete with alternative entertainment delivery methods in the
future. I am in the business of making radio survive and stay a viable
business.

It's great on FM. It adds extra channels but doesn't diminish the existing analog sound quality.

As far as AM is concerned, we all know what it sounds like during the day.

What I want to see is what sort of disaster is going to happen at night, in those areas of the country where skywave service sometimes fools with the night signal of low-powered local AM stations.

It's going to be hash on top of hash, especially on first adjacents. Even in local strong signal areas, it's going to be hard to fine-tune anything in.

Let's take an area like central New Jersey, with stations WWRU-1660 from Elizabeth and WTTM-1680 from Trenton. What do you think is going to happen at night when the skywave kicks in? In the words of the engineer working at those stations "it's going to be a disaster".

It might be a different story if about 80 percent of these AM stations were to just be shut down....and the remaining clear-channel high-powered stations would then be able to do IBOC without fear of interference.

There is not enough interest in HD/IBOC AM/FM, for consumers to spend
hundreds on digital radios, plus satellite radio gives HD/IBOC too much
competition. This is all mute, anyway, because the technical
implemetation problems for HD/IBOC, over the AM band, are too great:

Satellite radio requires a $150 a year subscription, while HD radios in the
next year will probably be under $100 (per reports at the recent CES in Las
Vegas). Radi Shack has already announced a Spetember roll out of models
below the cost of a one-year satellite subscription. And the extra channels
are free.

> This is all mute, anyway, because the technical
> implemetation problems for HD/IBOC, over the AM band, are too great:

We have converted half our AMs already, ranging from 50 kw directionals to
lower power stations with very complex arrays and have had no more than the
usual technical issues involved with adding new equipment. In fact, the
broadbanding of some of the AM directionals has resulted in an improved
analog signal, as well.

There are no significant implementation issues for AM HD. There are issues of night interference being studied, but there are no "technical implementation problems."

There are nearly 2,000 stations with HD licenses, and over 1000 on the air.
Tell me how that is a lack of interest.

There is no prohibition in expressing a point of view about something that affects radio (without which there would be no DXers) whether the point of view is easily accepted by the assembled crowd or not.

What a joke ! Do you really think consumers are going to pay for
digital radio ! Satellite radio is already deeply in debt, because of
that same reason ! What a fucking joke you are !

You, the fake "ace", accusing someone else of being a fake??? Ooooo,
the irony!

Seems he has a pretty nice web site. Show us yours.

Seems like he has had a lot of radio/broadcasting experience; tell us
about yours.

Seems like he has his resume up for all to see. Care to show us *your*
resume, Boggle Boy???

Well, there's 'point of view' and then there's 'shilling'.

Me thinks you fall into the latter category what with your involvement with
Univision/Ibiquity.

Yes.

> Satellite radio is already deeply in debt, because of
> that same reason !

Actually, satellite radio is losing money still, but not "deeply in debt." Satellite radio has no effective way of borrowing much money, since there are no profits. This situation is analogous to bying a house when you have no job or income... you can not get a loan. So the satellite companies use equity financing, selling more stock each time they need more cash to continue operations.

The original business plans of XM and Sirius predicted no profits until 2009, but it appears they will be one to two years ahead of schedule.

> What a fucking joke you are !

Coming from someone who is 100% wrong in everything, I consider this a supreme compliment. The convict never likes the prosecuter, either.

What a joke - that doesn't mean shit ! Do you really think consumers
are going to pay for
digital radio and a fee to sign up/listen ! Satellite radio is already
deeply in debt, because
of that same reason ! What a fucking joke you are ! Consumers have no
interest in purchasing digital radios to listen to AM/FM !

I just read that satelliete radio is $200 million in debt, and the
major stock holder just sold off all their shares ! Well, da !

Most of these points are either moot or trumped up.

Interference to adjacent channel stations is only a problem if these adjacent channel stations are being listened to in other markets. They are not.

Breaking up, in real market tests, is not an issue. HD on FM avoids many multipath issues. On AM, the HD signal is more robust than the interference free analog contour in major metros.

HD does pretty well with obstructions, and there is a fallback to analog anyway, so it does not matter. On FM, the gain over multipath issue is significant.

The 5 second delay is also a moot point. Stations that have any live programming already have a 5 to 10 second delay due to indecency regulations that can cost, now, $325 thousand per offense. So that is a very dumb point, obviously made by someone who is not in radio. Like you.

In other words, the list you linked is absurd and meaningless.

I'm beginning to hear promotion of HD, here, but little of it on AM.
Virtually all on FM. This despite the AM band, at least where I'm
located, crippled with IBOC hash, and with the exception of the local in
Waukegan, and the blowtorches using IBOC, not much of the band is usable.

Which raises questions about why, if HD is going to be the saviour of
the AM band, there hasn't been as much promotion of HD on the low band
as there has been on FM.

Although, the strategy of trashing the band to analog users, does, in
a Microsoft kind of way, push listeners of AM only available programming
into adopting HD just to escape the hash and hiss. All of it goes away
in the digital mode.

And make no mistake, there's not a radio available to me (and I have
hundreds) that doesn't nicely produce an IBOC hiss while listening to
analog audio of IBOC equipped stations.

"The Din of Ibiquity," indeed.

Two additional questions: if 2.0 spec receivers are on their way to
retail, how will we know them from the 1.x spec receivers, since
retailers are going to be disinclined to identify obsoleted inventory
themselves.

and:

What, specifically, are the differences, improvements, and
advantages of 2.0 over the previous generation of HD radios?

p

You will see, more and more stations turning off their HD/IBOC. There
is no market for HD/IBOC AM/FM, so why don't you go buy stock in
iBiquity and watch your portfolio tank !

I am not involved with iBiquity any more than a consumer of Coca Cola is
involved with the manufacturer of Coke.

I am involved with a radio company that has decided to invest many millions
in HD radio because we see this as an opportunity to grow and protect our
business.

Lovely. All digital radio is a step toward more complete
government/corporate control.

Ask Homey.

There is no fee for HD radio, nor is there for the HD-2 expansion channels.

No, it is not, as I explained before. Satellite has used equity, not debt,
financing.

$200 million is a very small amount considering the market cap of XM and
Sirius. But your figure is totally wrong.

XM has a market cap of $3.8 billion. It has long term debt of about $1
billion. That is a reasonable and actually good ratio for a start up.

Sirius has similar ratios.

No XM insider has sold any XM stock this year.

There is no single major stockholder of either company.

"Satellite radio" is not a single company... it is two, XM and Sirius. Each
is separate, with slightly different business models.

I am a DXer, but DXers have a somewhat symbiotic relationship with radio
stations. It is useful to know what is happening in the industry, and how it
affects DXing in the future.

FM took off when the FCC mandated an end to simulcasting. The biggest gain
in FM was from Beautiful Music, not progressive rock.

Threre is a net gain of 50 to 100 stations a month. We should be at 2000 on
air by Summer of 2007.

> There
> is no market for HD/IBOC AM/FM, so why don't you go buy stock in

iBiquity is privately held, and owned significantly by the developers and by
major broadcast companies.

> there has been on FM.

The problem is that, with or without HD, there are only a couple of viable
AMs per market, if you average the top 100 or so markets. Some have none,
like DC. To the non-viable stations, HD is probably of no interest...
brokerd shows, ethnic fringes and religion are the alternatives.

> Two additional questions: if 2.0 spec receivers are on their way to
> retail, how will we know them from the 1.x spec receivers, since retailers
> are going to be disinclined to identify obsoleted inventory themselves.

There are only a couple of 1.0 radios out there... the infamous "disco
lights" car radio and the BA and one or two others. They will probably be
retired... I understand the BA was redesigned, using the new spec.
>
> What, specifically, are the differences, improvements, and advantages
> of 2.0 over the previous generation of HD radios?

Lowered manufacturing cost is the main one, but there are some features
related to the HD 2 selection and the data screen and sensitivity to the
digital signal, as well as improvements to the basic algorithm on the
receiver side.

There is still not an efficient chipset that will allow portable devices
that run on batteries. That is a major concern, but being worked on.

Every major broadcaster invested in iBiquity to give it some start up
capital. There is no concern with "return on investment" as the idea was to
support a new digital technology that could enhance radio.

Other than DXers, there is very, very little listening to AM stations
outside their primary, groundwave coverage areas. So improving the quality
of the transmission on an 80+ year old medium vs. losing something that is
neither useful nor large is a good trade off.

Here, about halfway between Milwaukee and Chicago, there are a
number of successful, if not thriving, AM's. Of them, most are using HD,
judging by the hash. And yet, I've only heard WGN mention it. WGN being
the latecomer.

If there is going to be a push for HD and a significant investment on
the part of each station, why isn't it being promoted as heavily on
those AM stations using it, as it is on the FMs?

That was a good deal of the problem with AM stereo. That, and the
lack of a standard for AM stereo implementation. If it's on the air
creating trash, why isn't it being promoted for it's advantages to
encourage listeners to migrate from the analogue side where the trash is
an issue, to the digital side where it's not, and the claimed benefits
of AM HD are demonstrable?

Spend that kind of money and take that kind of risk, it makes no
sense not to motivate listeners to take advantage of what you're doing.

One would think that if DELPHI and JVC can put together a portable satellite receiver, with decent battery life, they could do the same with IBOC equipped receivers in a similar sized package.

Make no mistake, portable satellite receivers get good and warm, indicating some serious current draw, not unlike the first and second generations of digital cameras, but they do work, and battery life is pretty solid.

Univision is obviously relying on more illegals coming into the country to
listen and watch their services.

Univision embraces the illegals.

Follow the $$$

Hey, cool. Wait until some Hispanic station running IBOC jams out
an adjacent "Patriot" station and the black heilcopter believers
see it as a hostile act.

Will the added money from running HD pay for the 24 hour armed guards at
the transmitter site?

That is a good question. I think that the on air part is just comeing
together now, and many stations may be waiting for receivers to be available
to do the promotion. Most promotion at present is for FM based on the HD 2
channels.
>

I don't intimately know the development process. A few months ago, I talked
to Bob Struble (CEO of iBiquity) at a conference for our PDs and Managers
and asked him about a more efficient chipset. I got some discussion of the
power requirements for the DAC and an indication that development, together
with the mostly Chinese manufacturers, was going on. I was not given a
timetable.

Right now, a receiver with 4 AA batteries would only last about 4 to 6
hours.

Nope. Illegals do not participate in radio ratings.
>
> Univision embraces the illegals.

Nope. Companies that have Hispanic targeted stations, like Clear Channel,
CBS, Cumulus, Citadel, Radio One, Entravision, Lotus, SBS, Univsion, Border
Media, Bustos Media, Lazer Broadcasting, Donaldson, Multicultural, Liberman,
etc., etc. sell advertising based on ratings. If illegals do not participate
in ratings, they do not affect pricing and profits.

Morst every country in the UN is turd world, and the lazy & weak always whine about the successful. Israel is sucessful so the turd world countries around it whine. Same thing happens here in America. The democrats on welfare collecting foodstamps and living in the government assisted project housing, complain about the people that get off their asses and work for food and a place to live, like we aren't paying enough taxes to improve their welfare living.

If you can find a canadian flag you can make one. Just wipe your butt on
toilet tissue and burn it. Smells just like you're up in canada too.

Read this, and EAT SHIT !:

Sky-High Stakes for Satellite Radio (BusinessWeek Online, 09.04.03) - News article notes that XM Satellite Radio's announced second-quarter earnings on Aug.7, reporting a $164 million loss on $18.3 million in revenue, but XM figures on breaking even by late 2004. Investors certainly seem sold on the idea that XM can generate enough new subscribers to pay off mounting debt. While its future is promising, XM is still borrowing money to fund growth. It pays GM a subsidy to put the satellite radio receivers in its cars. All told, between those subsidies and marketing costs, XM pays $160 to acquire new subscribers, says XM Chairman Gary Parsons, a former MCI executive. So in effect, GM, which is a 20% shareholder in XM, is loaning money to XM, whose debt is now $732 million and could grow to $1 billion, says Ernst.

Whoever wrote the site you linked has no knowledge of actual broadcasting,
so he or she can hardly be an expert.

For a person to not know that nearly every station is delayed for indecency
protection means they have no contact with the industry.

And someone who does not know HD on FM significantly resolves multipath is
just a moron.

HD/IBOC will face the same fate:

/www.orbitcast.com/archives/satellite-radio-industry-tough-time-in-2006-according-to-analy
st.html

I agree with Jeffrey when he says, "...that the jury is still out on
the long-term prospects for satellite radio... at present valuations,
including the total amount of debt outstanding, the industry should

have 40 million subscribers rather than the current 9 million..." This mirrors much of what Frank Boyle, Jr. used to say when he was performing stock analysis for Wachovia.

With all the other competing services either already on the scene or due to arrive shortly, satellite radio faces serious competition from a variety of sources besides terrestrial radio.

I know enough, to know that you and HD/IBOC will be, "out the door".
Just like with satellite radio , which has suffered from lack of
subscribers, HD/IBOC will suffer even more, due to the fact that it is
only AM/FM radio. You had better start looking for another job, moron.

Please note that ".03" means 2003, or about 3 years ago. This is ancient
history.

> News article notes that XM Satellite Radio's announced second-quarter
> earnings on Aug.7, reporting a $164 million loss on $18.3 million in
> revenue, but XM figures on breaking even by late 2004.

XM's original plan had a profit projected by around 2008 or 2009. They are
on track for that, and may do it earlier.

> Investors
> certainly seem sold on the idea that XM can generate enough new
> subscribers to pay off mounting debt.

The debt is very small based on the size of the business and the market cap.

> While its future is promising, XM
> is still borrowing money to fund growth. It pays GM a subsidy to put
> the satellite radio receivers in its cars.

That is normal. It is not a "subsidy" but a commission. Just like LoJak
pay's dealers a fee for selling security systems. It makes money for GM, and
XM hopes to make it back by keeping the subscribers.

> All told, between those
> subsidies and marketing costs, XM pays $160 to acquire new subscribers,
> says XM Chairman Gary Parsons, a former MCI executive.

Hugh Panero is the CEO of XM. He runs it. Parsons is chairman of the bord of direcotrs, and does not run the company.

> So in effect,
> GM, which is a 20% shareholder in XM, is loaning money to XM, whose
> debt is now $732 million and could grow to $1 billion, says Ernst.

That sounds like a journalist who does not know business writing about business. GM is not loaning anything to XM. GM sells XM subscriptions and gets a commission. This is no different than selling aftermarket add ons, paint protection and all the other things dealers sell to up the mark on each car.

Hopefully the new owners will see the light and sack him after their takeover of the firm is complete.

Same fate? What does participation in ratings by illegal aliens have to do
with HD?

Not likely. Part of the valuation of the radio division is based on the huge
ratings gains in the last 6 months for a project I originated and created.

The link you supplied is to a page done by some guy who streams 20's music on the internet. Hardly a professional. And the stuff he has on the site is just about 100% wrong.

WAQI, WQBA, KTNQ, WRTO, WADO, KFLC, KLAT, KGBT, KLOK... these are our operating or under installation HD AMs. All but tow of them are 50 kw stations. And you cite a webcaster who plays flapper music dubbed from Victrola rolls. Wunnerful.

You are obvioulsy a waste of time. You will be, "out the door", when
HD/IBOC goes bust, just like satellite radio will ! Neither one, has
nearly the subscriber base they need, to generate long-term profits.
Any idiot can see that the general population is not going to pay a fee
to listen to digital AM/FM radio, plus spend hundreds on new digital
AM/FM receivers (sure, everyone is going to trash the 800 million
existing AM/FM analog radios). With this happening to satellite radio,
it certainly will happen to digital radio.

IBOC AM Broadcasting Is a Complete Failure!

HD is an enhancement to existing AM and FM stations. It can not "go bust"
although it could be less sucessful than people like Lowry Mays, Bob Niel,
Alfred Liggins, Lou Dickey, etc., believe. Nobody will lose jobs over it
even if it does not work.

>, just like satellite radio will ! Neither one, has
> nearly the subscriber base they need, to generate long-term profits.

AM and FM radio have no subscriber base. They are free.

And XM and Sirius are ahead of projections on subscribers, and ahead of
projections on profitability.

> Any idiot can see that the general population is not going to pay a fee
> to listen to digital AM/FM radio,

There is no fee. It is free.

>plus spend hundreds on new digital
> AM/FM receivers (sure, everyone is going to trash the 800 million
> existing AM/FM analog radios).

Existing radios are compatible, just that they are analog... as they always
were.

Radios in the $100 and below range will be on sale in a few months.

> With this happening to satellite radio,
> it certainly will happen to digital radio.

Satellite radio _is_ digital radio. HD is digital radio. Satellite is paid
by the consumer, AM and FM by advertisers.
>
> IBOC AM Broadcasting Is a Complete Failure!

Nope.

Check ratings on KOVE, KLNO, KINV, KGBT, KCOR-FM, KKRG, KBNA, KQMR, KRCD,
KLQV, KBRG, KRGT and KRDA since September, 2005. The group is up by over
100%, and represents a quarter of the FMs in the company.

The WORDS of the Constitution are the LAW, and have far more meaning and potential than the biggest banner on earth. They are not just a symbol, they are a written, legally binding and recognized record of the mutually agreed-upon law of the land. Even then, if they burn, the law does not disappear until the people of the nation say so. If every scrap of parchment burns, the law remains intact and endures. So, quit being so disingenuous - it does neither you nor anyone else any good.

I didn't read your biography but it looks like you were an exchange
student.

I spent time on the picture pages showing the stations you visited and
worked at.

Shunt feeding the antenna makes sense as you can move the tap for more
control over the antenna reactance and using a shunt feed network
should make it easier to present the antenna as a stable load over
changing weather conditions.

One question on the Mexican page I have is that you point out the
antennas are on the roofs of buildings. Since they are verticals ground
is important. They must have used copper strips and chicken wire or the
like to make a ground plane for the antenna on the roof of the
buildings. Is this what they did?

I heard them on 6925 from 05:00 to 06:00 last night broadcast from "the middle of nowhere". They were the only pirate I heard. They rebroadcasted their 2005 Halloween program. The program had high production values and a very good signal S6 on the peaks. Basically a narration of several sci-fi stories that I found entertaining.

In lower noise conditions, more than enough.
>
> How did you get around as a teenager in central and south America?

Public transportation is very convenient, cheap and frequent in all of Latin
America. In my first year as a station owner, I did not even need a car, as
the transmitter was a couple-minute walk from a 24/ bus line. If I needed to
take big parts, like transformers, etc., I took a cab. Also cheap.

> You
> must have traveled with a relative or had contacts to meet in the
> various places you stayed prearranged?

Nobody in my direct family had even been to Latin America. I simply winged
it. It was a safer time, of course.

When I did some archeological work in Guatemala, Honduras, etc., I used
busses. That is how I got around when working in Mexico City, too. And my
entire trip through Central America was a combiantion of busses and TACA,
the regional airline. I usually got references on hotels for my next stop at
the hotel I was staying in at the time. Got a couple of duds, too... and
even spent one night sleeping in the "radio teatro" at YSKL in San Salvador.

Sort of. When I went to Mexico, a friend of the family arranged for a family to stay with while I was in school. Of course, I did not go to school.

When I went to Ecuador, I simply wrote to a school in Guayaquil and registered. When I got there, the governemtn got overthrwon, and schools were closed. I went to Quito, and registered with a school there, and found a room to rent.

Mexican stations for the most part had full towers with ground (except XEOC-560, which was on a roof in 1963).

Rooftop installations can be done very effectively. All it takes is using coper wire in what is called a counterpoise strung over the roof.

KTNQ in LA has a ground system that is about 25 feet above ground level. Over the parking areas, there is silver soldered copper wire with clamps, and the radials are laid under the roofing material. The efficiency did not change significantly when this was built (the towers were there before the buildings).

Many Central and South American AM stations in the 60's had horizontal antennas, with the ground being the metal rebar of the building or a bunch of buried car radiators or something similar. It worked, but the range was limited.

Yes. It is totally bogus and incorrect. As I said, it was done by some
perosn who streams 20's music on the internet, not a qualified, experienced
broadcaster with engineering background.

> How do you justify away reports of HD/IBOC
> dropping out of signal, even at close ranges,

Since there are only a couple of receivers available, I take many of these
comments with extreme skepticism.

Using one of the car radios, we have shown that KTNQ in LA has a more robust
digital (HD) signal than the analog AM signal, being listenable where the
analog signal is already getting noisy. This quality of HD, in the larger
metros, of eliminating man made interference, is one of the biggest benefits
of HD.

> and radio stations
> turning off HD/IBOC, because of interference to other stations

I only know of one case: WIND in Chicago, now owned by a religious
broadcaster, wanted to protect the extreme fringes of a second adjacent
station they own in Wisconsin, WYLO. That is a decision only they can make,
and is based on many religious stations selling prograsm time based ont he
donations they pull.

> and
> listener complaints, from:
>
> http://topazdesigns.com/iboc/station-list.html

That list is hopelessly out of date. More than half the HD stations in the
company I work for are missing.

I do not know of one station that quit HD due to listener complaints, especially since nearly no listeners have receivers yet.

A couple have turned it off because their antenna sisytems are not broadband enough to run HD. Or KFI, which had their tower fall and is on AUX facilities.

Will you stop posting the same lame links over and over? One is from a person who does not even know most stations already have delay, and the other is a list that is painfully dated and wrong.

Since you have never posted any data from professionals, how would you know?

I would try these frequencies for north and central America from
MT-shortwave blog page.
<http://mt-shortwave.blogspot.com/>

0100-0200 9730am 11735ca 13760ca 15180ca
1000-1100 6285am 9335ca
1300-1400 9335na 11710na
1500-1600 9335na 11710na

I would also listen to Japan and South Korea.

Here is what one real professional said on another newsgroup...

"I'm a major booster of FM IBOC. I have serious reservations about
nighttime operation of AM IBOC, although I _do_ believe that, absent
proactive changes in the technical quality of the audio delivered in the
AM band, that its audience will literally die off because it is skewing
older and older. Even KGO has a little more than half the share it did 10
years ago, if memory serves."

This quote is from Robert Orban. 'nuff said.

If some of the transmit power goes into the digital side bands then
less is available for the analog side bands. Total power would remain
the same. Equalization should help but I would not know if it is a fix
that will result in restoring the punch the analog used to have sans
digital.

If you put power in additional side bands then either the carrier or analog side bands must be reduced in power. You can't have an analog station running at some numerical power, add digital side bands and not have something change. For the same numerical power level either the carrier or analog side bands must go down.

The only exception I can think of here is limiting the analog side band spectrum and having the digital take its place. In that case you trade one for the other and the numerical power level can stay the same. As a result of this trade the analog audio will have the same punch but the high end will be limited.

I heard part of that broadcast as well. I'll have to check some of the pirate frequencies tonight, though I sure hope conditions are better than they were this afternoon. When I can't hear Olympia Radio on 13170, I know the sun is acting up.

There are literally two signals piggybacking on the same "channel" and the
analog does not reduce power. The HD digital signal is 1/100th of the power
of the analog signal, so it does not really show up on the common point
ammeter for directionals or the base current meter for an non-d AM. AM
antenna current ammeters fluctuate anyway, due to the effects of modulation,
so the HD signal makes no appreciable difference, as it is 20 db down from
the main carrier.

How is AM IBOC expected to shift the audience to a younger group? This
would require a change in programming. Where do you and the other
professionals expect AM band programming to go?

Yeah well, as long as he writes reasonable stuff I'll go along. I'm not a detective and don't want to spend the time researching his background. This is why it's good to stick with news and technical facts. Personal history information I'm willing to take at face value. He is innocent until proven guilty.

Not really. My father had died when I was much younger, and I had been
working since about age 9. My mother had studied abroad, and was open to the
idea. I was just looking for any way possible to get out of going to school,
and it worked.

The sound quality is so bad right now that most younger persons will not
listen. With HD, if the AM part works, it will allow any kind of programming
on AMs, rather than focusing just on 35+ listeners as things are today.

What the hell is your name, anyway? You have more handles than an old steamer trunk. Are you trying to outrun an old court conviction or something?

That does not sound unreasonable to not see an appreciable difference in
a RMS amp meter since the power level in the digital side bands is small
especially if it is taking the place of some of the analog high end

spectrum.

Sorry, I don't usually record programs. Some pirates have their past
programs on the web so you might want to do a search.

Try to listen for them as I believe they said that a CD of the program
would be sent for a reception report.

This is a small but useful accessory, dxAce. I've had one on my Eton E1 since the beginning, and I use it with the Griffin PowerMate knob that I have hooked up to my Flex-Radio SDR-1000. Check out the 2nd to latest entry in my SDR blog for a photo of the Griffin knob with the Finger Dimple spinner attached.

The sound improvement is understandable but currently a lot of AM is
talk radio, news and information. I don't think a younger crowd is going
to want this so AM formats will have to change.

If the idea is to make AM more similar to FM in order to lure FM
listeners over to AM, that doesn't make much sense to me. If people
listen to FM, it's probably because they like FM, the audio quality,
the programming, etc. If AM just becomes a slightly crappier version of
FM, why would anyone care? At least now AM is its own thing. True, it
markets to an older audience. True, that audience is getting older all
the time...but then again, so is the audience that's listening to FM.
And believe me, the young, drug-addled, ADD afflicted people who are
listening to Eminem today will look for something very different twenty
years from now, after they've matured and sobered up.

Everyone else is full of shit, but you, even all the articles that I have read concerning interference and poor quality. Sorry bud, but these articles are not bogus, HD/IBOC will fail, especially, for nighttine AM ! HD/IBOC does not play well with the AM band ! You obvioulsy know the subject matter, but that does not discount the countless articles that show major problems of implementing HD/IBOC over the AM band. This article from RWonline says it all, so run along little man:

From,
http://www.rwonline.com/reference-room/guywire/gw.2005.10.19.shtml

"I was an early supporter of IBOC for both AM and FM, but after carefully reflecting on how the AM rollout has faltered I am now convinced the proposed standard for AM during the hybrid transition period is not the best it could be. I am joined by many other engineers who see the possibility of a colossal train wreck coming, when and if AM IBOC is opened up for full-time operations by all stations."

"Using IBOC at night undoubtedly will unleash an ugly Pandora's Box of trouble for many stations. The Canadian government has formally objected to U.S. stations operating IBOC at night, fearing significant interference to Canadian stations operating on adjacent channels. Neither the NAB nor the FCC had yet to comment on this objection at this writing."

"While AM IBOC still holds great promise for its ability to deliver dramatic improvement over its analog host with 15 kHz stereo reception, it only appears to be able to do that reliably inside the protected primary and NIF coverage contours. Even then there are problems with analog degradation on various models of existing receivers."

"A number of stations are finding it difficult to suppress the "bacon-frying" noise produced in all analog receivers because of nonlinear performing transmission chains, including the null regions of many directional antennas. The necessity of having to rebuild antenna

systems will place an expensive burden on numerous stations, many of which are the least able to afford it."

"Most AM station owners understand the risks of investing in the Ibiquity standard and are postponing plans to add IBOC until more of the lingering questions receive answers."

"According to one resource as of this writing, there are 77 stations on the air with daytime AM IBOC. At least five Class A 50 kW blowtorches and a few other stations have turned it off, mostly because of interference caused to their own analog listeners or to their adjacent-channel neighbors."

AND FINIALLY:

"If the commission chooses to adopt the Ibiquity IBOC standard for unlimited AM day and night operations as proposed, here is a worst-case scenario that might unfold: A messy outbreak of interference complaints will be filed by adjacent-channel stations that lose existing analog coverage as increasing numbers of stations deploy IBOC full-time. Many of the complaints will be dismissed on the basis that the interference occurs in unprotected coverage areas, which is understandable and expected."

"In cases where the interference complaints are legitimate, the offending stations will be forced to reduce IBOC power. In many cases, they may have to reduce it to a level where it's not justified to operate it at all without leaving its listeners a poor impression of the new technology and the station's inability to use it effectively. Would such stations be content to operate IBOC only during the day, outside of critical hours and nights?"

"The overall result of this chaos could leave AM IBOC an under-achieving digital standard that only a minority of stations could use to full advantage. We could see the filing of lawsuits by stations that invested in the technology but were forced to stop using it."

You will never convice me, otherwise !

The biggest problem is that there are not many competitive (what the trade calls "viable") AM signals in most markets. So the choice will always be limited, and the AMs will either be modified talkers or entertainment based, as opposed to broad based music stations. In a few markets, they will be alternatives for more limited music formats, like standards, oldies and some ethnic formats that can not be supported on a full FM.

Obviously, all this is kind of putting the cart ahead of the horse... and depends on market acceptance of HD. AM, as many professionals have theorized, will ride along with FM if HD is successful.

I am not saying we will have format duplicaiton. But, well done, AM HD sounds acceptable to younger ears if the content is right. It certainly would be a way for talk to reach younger demos without migrating to FM (as companies like Bonneville are doing now in SLC, PHX and DC). It also offers formats that can not sustain a full FM a second chance, with oldies being one example.

> At least now AM is its own thing. True, it
> markets to an older audience. True, that audience is getting older all
> the time...but then again, so is the audience that's listening to FM.

FM audience is not getting older.

And the issue with AM is that nobody under 35 listens (a bit of an exaggeratin, but a true generalization). Older audiences can not be sold, so AM would become extinct unless something is done.

>

Hey, my VP listens to Eminem and Fitty and Daddy Yankee and Don Omar all day. He is an Ivy League MBA, enormously intelligent and simply likes a different kind of music. the fact that you do not like it does not mean it is not good to others. And saying all hip hop listeners are druggies is not true, and inappropriate.

I have a bunch of hip hop on my iPod, too. It is selected, but some of it is really good.

The sound quality of HD is not bad. The FM is cleaner and has more dynamic
range, and is not encumbered by the preemphasis curve on analog FM.

Oh, yes. the stuff you have posted is full of it. You have not posted a
single thing today by an expert... all are by clueless wannabe critics with
obviously no radio or engineering background.

Here, for the second time, is what Bob Orban says about FM HD:

"I'm a major booster of FM IBOC. I have serious reservations about
nighttime operation of AM IBOC, although I _do_ believe that, absent
proactive changes in the technical quality of the audio delivered in the

AM band, that its audience will literally die off because it is skewing
older and older."

> Sorry bud, but
> these articles are not bogus, HD/IBOC will fail, especially, for
> nighttine AM !

Since so little radio listening is at night (less than a third of the
daytime dayparts), if nigh HD is not implemented, we can live with it. I
suspect it will be implemented and that it will work ok, perhaps at more
than 20 db down, though.

With over 1000 HD stations on, it is difficult to say this has failed, since
we are at the very beginning of receiver marketing.

> HD/IBOC does not play well with the AM band ! You
> obvioulsy know the subject matter, but that does not discount the
> countless articles that show major problems of implementing HD/IBOC
> over the AM band.

What problems would these be? Some staitons with old high-Q directionals
need to do extensive antenna broadbanding. Most metro AMs do not even cover
the whole market today, so that is definitely an issue... but one that
affects analog, too. Otherwise, there are no problems implementing HD. There
is a decision to be made about night HD, but that is not an implementation
problem but a regulatory one.

> "I was an early supporter of IBOC for both AM and FM, but after
> carefully reflecting on how the AM rollout has faltered I am now
> convinced the proposed standard for AM during the hybrid transition
> period is not the best it could be. I am joined by many other engineers
> who see the possibility of a colossal train wreck coming, when and if
> AM IBOC is opened up for full-time operations by all stations."

First, HD is in use daytime only on AM. This writer is way ahead of the
current situation.

Second, the rollout is just beginning. The first steps were to get stations
on and HD 2 content activated. That is being done now. The rollout isw on
schedule.
>
> "While AM IBOC still holds great promise for its ability to deliver
> dramatic improvement over its analog host with 15 kHz stereo reception,
> it only appears to be able to do that reliably inside the protected
> primary and NIF coverage contours. Even then there are problems with
> analog degradation on various models of existing receivers."

There are no problems with analog degradation. the bandwidth is more
limited, but that is not a problem, just a condition of doing HD. 95% of
existing AM receivers sound as good and sometimes better with more limited
bandwidth due to receiver design. This may be a very good thing.

Most stations don't give a hoot about coverage outside the primary contours, so that point is dumb and ill-informed. This is obviously a "reader letter" and not by one of the editors. RW prints all kinds of kook letters, and even lets the Killer of AM, Leonard Kahn, write pieces.

> "A number of stations are finding it difficult to suppress the
> "bacon-frying" noise produced in all analog receivers because of
> nonlinear performing transmission chains, including the null regions of
> many directional antennas. The necessity of having to rebuild antenna
> systems will place an expensive burden on numerous stations, many of
> which are the least able to afford it."

If the station has a narrow antenna system already, they should have fixed this decades ago. the technology exists, and any staiton that did not do it shot themselves in the foot. Getting stations to fix crummy antenna designs is a good thing.

> "Most AM station owners understand the risks of investing in the
> Ibiquity standard and are postponing plans to add IBOC until more of
> the lingering questions receive answers."

In the larger markets, the good signals are nearly all moving to HD.

> "According to one resource as of this writing, there are 77 stations on
> the air with daytime AM IBOC. At least five Class A 50 kW blowtorches
> and a few other stations have turned it off, mostly because of
> interference caused to their own analog listeners or to their
> adjacent-channel neighbors."

That is just not true. What we have are cases like KFI, with a damaged antenna, waiting to rebuild to activate HD again. Clear Channel, America's AM leader in content and ratings, is putting HD on every viable AM they own.

The crap about interference in areas where protection is not mandated is silly, so I snipped it. No station gets a free ride outside their protected contour. In any case, scant little listening takes place there anyway.

KFRC YOU LATER:
http://www.sfgate.com/cgi-bin/article.cgi?file=/chronicle/archive/2005/09/18/PKGM9DCSIJ1.DTL
AM Radio's desertion of Older Radio Listeners continues.
KFRC a leading AM Radio "Oldies" Station, has shifted
from '50s and '60s Hits and moved into the '70s and '80s.
The reason for the move, made on the Labor Day weekend,
(2205) is obvious. The Moldier Oldiesfrom 40 to 50 years
ago were drawing primarily listeners 50 and older, and the
AD Agencies just don't care about them.

About KFRC
http://en.wikipedia.org/wiki/KFRC
KFRC-FM http://www.kfrc.com/kfrc/index.asp

In 2005 Infinity sold the Radio Station [KFRC 610-AM] to
Family {Christian Radio} Stations, the owners of KEAR
106.9 FM and eventually 610-AM became KEAR 610-AM
Christian Radio => http://en.wikipedia.org/wiki/KEAR
Radio Station.

Maybe it's because you target the "liberal" media as being the source of
the problem when the truth is that someone in the government is the
source of the problem. You are remarkably silent when it could be a
"good" Repub that could be the source of the leak.

Your silence speaks volumes!

OK Slow Code, this will require thought. If Bill Clinton really transferred sensitive technology to China, don't you think Gingrich and posse would have impeached him on that offense rather than the Lewinsky affair, which made the GOP look buffoonish? [Ok, more buffoonish than usual.]

At the time when the GOP was making noise about the technology transfer, China was able to hit the US with a nuke for two decades!

BTW, which president gave China permanent most favored nation status? Here is a clue:

Not so. Today's "younger audience" is tomorrow's "older audience".

Current AM sound is NOT acceptable. An iPod is acceptable. The quality of AM HD is comparable with an iPod. And, the key element, it is digital.

I am not designing marketing campaigns. Sound is not a marketing point... content is. Bad sound is a negative, and eliminating that perception allows AM to compete for younger audiences.
>
>> > At least now AM is its own thing. True, it

The individuals who listen to radio are each getting older. However, we are speaking of "the audience" and that means the sum of radio listeners. Radio mirrors the population, except in the demos that radio can not serve, which are teens (12-17) and 55+. The inference is that young people (18-24, 25-34) are not using radio, which is untrue.

>> And the issue with AM is that nobody under 35 listens (a bit of an

>
> Not so. Today's "younger audience" is tomorrow's "older audience".

And the average age of AM increases each year, as there is an entire generation that does not use AM much, if at all.
>>

Nope. Most buyers of hip-hop are suburban white kids.
>
>>
>> I have a bunch of hip hop on my iPod, too. It is selected, but some of it
>> is
>> really good.
>
> Oh, I guess if a lot of people like it, it must be good. Hmm....

That is the standard we use. If lots of people use something, it means they
like it.

I probably dislike the music you like. But that does not mean it is not
good... it is just not good for me. Please respect the tastes of others.

Hi,

Sorry to bother all here at this board, but it came to my mind that i could find help here.

In 1998 I lived for one year in germany as an exchange student in the house of a nice family. Unfortunatelly I lost conntact with them. After some searches in the internet I manage to find some info on the father who was an enthusiastical radio user, but unfortunately they were old posts in redio related threads and the email there posted seems not to work anymore.

I really have no idea how radio works, but is it possible to contact him with the info on his QSL?

http://www.hb9dhg.ch/View_call.cfm?RequestTimeout=500&Id=DF2CQ&No=2859

Many thanks!

- You're a blooming idiot. I said nothing of the kind, and once again,
- for the umpteenth time, you put words into my mouth. You are
- disgraceful.
-
> > I Say : God {Allah} Bless America -and-
> > Our All American Symbols - Amen !
> >
> > Symbols Like Words Have Meaning - Think About It ~ RHF
>
-
- The WORDS of the Constitution are the LAW, and have far more meaning

- and potential than the biggest banner on earth. They are not just a
- symbol, they are a written, legally binding and recognized record of
- the mutually agreed-upon law of the land. Even then, if they burn,
the
- law does not disappear until the people of the nation say so. If
every
- scrap of parchment burns, the law remains intact and endures. So,
quit
- being so disingenuous - it does neither you nor anyone else any good.
-
- BJ
-

BpnJ,

Do not confuse the words written in the US Constitution
with the Document which "IS" The US Constitution
{The Document being a Symbol} - Just Like The US Flag.

ting, Ting. T I N G ! - I love my cymbals ~ RHF

Here is an exact copy of the posting on another group by the engineer at KGO in San Francisco, which has been, for 27 years, the #1 station in that market... you can read that it will take a lot of tweaking and adjustment, but this engineer of one of America's finest AMs, believes it will sound very good when finished.

Quote:
"We've been REALLY BUSY lately trying to get a new transmitter installed and get HD installed on KGO and KMKY over the past few weeks. I just wanted to clear up a few misconceptions and share with you what we've learned and what you'll be able to expect from us over the next few weeks.

First: We've had the new KGO transmitter n the air for a couple of weeks now. You should notice no coverage difference as the amount of power going into the antenna system is unchanged at 50 Kilowatts. It's summer, the noise level is up and that's about all that's different, except that we have a newer, more efficient, gray box on the air instead of a blue one. I'm hoping that the air conditioning bill will go down, and it's physically about half the size of the boxes that have been on the air. It also means that we now have three full power backup transmitters, so if we're off... It's something REALLY UGLY!

Next: As of today (wednesday the 5th) we are not running the IBOC. You can tell because the digital carriers aren't there (hisssssssss). We are running a newer version of the Optimod, the 9400, which has processing for both the HD and the analog in the same box. Until today, I mistakenly thought that we were operating on the old 9200 (which is a

sweet box). This morning, I went out to the transmitter to solve some problems and noticed that the 9400 was on the air with the new XR50 and started to adjust the settings. I'm still not happy with them, and usually it takes me a few days or even weeks to get used to a new box and get it sounding the way that I like. We're still not there, so please bear with me while I adjust, listen, drive and adjust some more. We're very concerned about quality at KGO and I can assure you that I'll make this work as well as it can.

The IBOC was on Friday, and I was very disappointed in the sound of it. I worked throught the weekend to understand what was happening and try to make the most of it. I learned a lot and I don't think that you'll be disappointed when it's finally "right". I think that the sound of the digital might even suprise you. Please keep an open mind and I'll let you know, here, that I think it's "ready for prime time". Right now, it isn't. But it isn't as awful as Friday (which was TRULY AWFUL).

One issue right now is how we'll make a smooth transition between modes. There is an odd problem with the "enter delay" function of the IBOC exciter and I'm working on that daily. Delay is a challenge for our news people and they'll have to listen "pre-delay" through various special arrangements (phone couplers, two way radio, etc). They've never had to work this way before and we're trying to make it as easy for them as possible.

Listen critically when you can. Let me know what you think and please tell me what kind of radio you're using. Also understand that this is very much a "work in progress" and that we care about this a great deal.

I can tell you that today, right now, I'm still not happy with the high end. It's dirty. I like it "bright" and clean, and I like a nice tight bass. It will be very smooth and consistant, and a bit "commercial" sounding. It took me about a month to get it where it was before, and honestly, I still had some concerns about the bass being a bit "tubby". Anyway, give us a chance and we will come through for you.

Thanks for listening... Critically! You guys are a tough audience, but very much worth the effort."
End quote.

Now, what do you say? This is an expert, a professional and a person responsible for the installation and adjustment of a complex HD system.

Lardass eats the leftovers!

Bird droppings survive space launch Wed Jul 5, 5:29 PM ET

HOUSTON - NASA's rocket scientists have a new appreciation for the out-of-this-world power of bird droppings. The orbiting space shuttle Discovery sported some whitish splotches on its black right wing edge that NASA officials said appeared to be bird droppings.

Shuttle lead flight director Tony Ceccacci said he saw the same splotches on the identical part of the shuttle about three weeks ago when Discovery was on the launch pad and laughed when pictures beamed back from space Wednesday showed they were still there.

That means these bird droppings withstood regular Florida thunderstorms, a mighty Fourth of July launch during which 300,000 gallons of water is sprayed at the shuttle's main engines, and a burst upward through Earth's atmosphere. During that launch Discovery went from zero to 17,500 mph in just under 9 minutes.

And still the bird droppings remained in place. Mostly.

Some of the droppings may have shaken off during liftoff, Ceccacci guessed. He figures the rest will burn up during landing, when the shuttle's edges get as hot as 3,000 degrees Fahrenheit.

Rob Fergus, science coordinator for Audubon At Home, a division of the National Audubon Society, sometimes gets calls from people asking how to remove bird excrement from their cars.

"Usually they can hose it off," he said. "Apparently that doesn't work with the space shuttle. Maybe they need a bigger hose or Lloyd Davies."

Muwhahahahahahaha!!!!!!!!!

NEWS RELEASES from the United States Department of Defense

No. 633-06 IMMEDIATE RELEASE
Jul 05, 2006 Media Contact: (703)697-5131
Public/Industry(703)428-0711

AFN To End Radio Play-By-Play Sports
The Department of Defense announced today that the American
Forces
Network (AFN) will cease broadcasting play-by-play sports on radio later
this
summer.

The decision to discontinue live play-by-play sports on radio
was
based upon a series of Department of Defense worldwide audience surveys of
military members and civilian employees stationed overseas, which showed the
preference of viewers to watch sports, rather than just listen to them. The
impact of live sports on overseas local affiliate radio schedules was also
factored into the decision.

"AFN audiences prefer to watch the greater variety of sports on
television rather than listen to them on the radio," said Mr. Robert
Matheson,
director of broadcasting at the AFN Broadcast Center in Riverside, Calif.
"When radio sports coverage comes on, most listeners tune out. Our mission
is
better served when the largest possible audience tunes in to non-sports
programming and spends more time listening."

AFN radio play-by-play sports broadcasts were, as recently as 10
years ago, broadly listened to. Since then, AFN television sports coverage
has expanded exponentially.

"More and more sports fans have been turning to AFN television
for
the greater variety of sports," Matheson observed. "We used to air only one
or two TV games a week. Now, since the introduction of AFN-sports and
recently AFN-xtra, our multiple AFN television services, including
AFN-prime,
carry nearly 80 events a week."

Most play-by-play sports on AFN Radio ended with the conclusion
of
the NBA Championships. Some motor sports programming will remain on AFN
radio's schedule in order to complete their seasons, with the September 9

NASCAR Nextel Cup race from Richmond International Raceway scheduled to be
the
final AFN radio sports play-by-play broadcast.

"We signed agreements with the Motor Racing Network and the Indy
Racing League before reassessing our approach to radio sports," Matheson
said.
"We'll honor those agreements."

When AM seriously tries to compete for younger audiences, that will be
the death of AM. AM will never, ever be competitive with FM in this
regard. To deny this is mere self-deception.

> >

inference either.

>

I suspect they will, when they're older. I didn't listen to AM very
much when I was younger either.

> >> really good.
> >
> > Oh, I guess if a lot of people like it, it must be good. Hmm....
>
> That is the standard we use. If lots of people use something, it means they
> like it.

Your standard is a non-standard. If it is somehow "forbidden" to make a
critical or negative judgment about a particular piece or genre of
music, then any positive judgement you might make is devoid of meaning.

>
> I probably dislike the music you like. But that does not mean it is not
> good... it is just not good for me.

I agree with this. Whether you or I or anyone else likes a particular
kind of music implies absolutely nothing about its quality. But of
course we can employ the "good for me" and "good for you" talk if you
think that will allow us to play together peacefully in the sandbox.

>Please respect the tastes of others.

Sure, except when such respect is unwarranted.

Eduardo is a Saint. Apparently my mother liked the name, from the time she lived in Europe. It is the "second" given name I got when baptized. It apparently comes from a Saint, "Saint Eduardo, See of Argent, three barrels fesswise and on a chief rayonny sable three fleurs-de-lis argent".

Why do you even care. Do you ask Billy Bob why he got the "Bob" tagged on? Or Mary Lou or Barbara Ann or whatever? Lots of people have two given names.

It's not at all unusual for hispanics on the American continent to have
European (English, Irish, German, etc., as opposed to Spanish) last names,
while having more traditional Spanish given names. This is because of the
large number of European immigrants that live in these areas.

RW is a magazine. It takes letters and submissions from readers. That particular submission has significant error of fact, and proves that, just as in any other field, there is a percentage of every profession that is at the bottom of the food chain.

RW even gives space to Leonard Kahn, the Killer of AM Radio, space to rant. That does not mean he is any more right than the letters to the editor in your local paper are.

I gave you a quote from Bob Orban; you come back with a comment from an ignorant hack. Did you miss my quote of the comments form the engineer of nothing less than KGO? Those are professionals.

As I said, there are over 1000 HD staitons on the air, and over 1000 more coming.

It is about content. You obviously have not heard HD AM, which has all the
quality needed to erase the image of AM as "inferior" and bad sounding.

In fact, there is some listening to AM by younger persons, based on content.
This is almost exclusively to sports staitons that are well programmed. In
these cases, content drives listeners to AM... with better sound quality,
more younger listeners will come to AM as part of thier menu of choices.
>>

> much when I was younger either.

As each year passes, going back to the early 80's, the average age of AM listeners increases. 20 years ago, teens did not listen. Then it was 18-24 and now it is 25-34 that is no longer listening.
....

A lot more dilletantes know the name of Leonard Kahn than they do Bob Orban. Orban, despite his broad touch on broadcast audio, and his deep understanding and keen insights to the profession, keeps a quieter, more subdued profile than Kahn.

Although Orban's name pops up in some of the most interesting places.

Remember Kevin--the AM Stereo advocate who was all over the broadcasting boards a few years ago? He actually had the brass to argue audio processing with Robert Orban...often quoting Leonard Kahn to make his points.

It was later revealed he didn't know who Orban was.

Sometimes, quoting Orban is not the most effective argument strategy.

I have a rather special lack of fondness for Kahn.

In the late 70's, at WQII in San Juam, I had oreders #1 for two of the competing AM stereo generators. In other words, I had a 40% chance of having the first licensed US AM stereo station, at a time whn AM steroe could have made AM viable in competiton with FM. Leonard went into his legal gyrations and the result was that the final 2approval" of AM stereo came 5 years later, when AM had already died as a music medium. So, in my book, Leonard killed AM.

And I have a great respect for Bob Orban and his associates, particularly Greg Ogrinowski (sp) who did some custom work for me in Puerto Rico. Brilliant engineers, and in the buisness for the long run... as witnessed by their dedication to providing quality audio gear.
>
> Although Orban's name pops up in some of the most interesting places.

He is an occasional poster at ba.broadcast, where he has been part of a discussion of the new KGO Nautel install and related issues.
>
> Remember Kevin--the AM Stereo advocate who was all over the broadcasting

Another graphic example of your lack of logical awareness. Once again, you place the symbol above the rights it represents. Very demagoguic.

> BpnJ,
>
> Do not confuse the words written in the US Constitution
> with the Document which "IS" The US Constitution
> {The Document being a Symbol} - Just Like The US Flag.

Absolutely wrong. The words of the Constitution are the specific means of communication by which the law itself is transmitted from one person to another, one group to another, one generation to another. They are key to the continuation and perpetuation of the law. They are not merely symbolic - they are the vehicle by which the law is promulgated. No faulty human mind could ever replace the loss of these written words, try as we might.

Aside from this, the original document as a symbol, apart from its historical significance (which is *huge*, much bigger than *any* flag, partly owing to its rarity, partly to its common ownership by the entire nation (whereas flags are individual property), and partly to its absolute importance as the seminal basis for modern representative government) is by itself no more critical to the law than a flag would be. The loss of neither one, by accident or design, would diminish in any way the real importance of the concept of the U.S. or its law. Yes, we'd be sad, outraged and angry, but we'd survive intact.

I stand by all my original comments. As far as copping an attitude, I have to say that your aimlessly winding blather, the result of an emotional rather than rational reaction, is about the most frustrating amalgam of silliness I have ever seen. Anybody who hopes to have an intelligent discussion will instantly roll their eyes at the stuff you write. You need to stop drooling on yourself before you try to speak (or type).

I have no doubt that there are many Canadian citizens who are disgusted by the seal hunt, as well as certain other actions that occur in their nation. But, just as the U.S. and every other nation does not have any moral superiority when it comes to violence against nature or more powerless critters, Canada has done much good too, with a national and provincial park system second to none, relatively strong efforts in the conversion from oil to other fuel sources, and the recent protection of the habitat of the "spirit bear" in its West, to name a few.

Amazingly, under George Bush, we have several new national parks and monuments - Cuyahoga Valley, Congaree, Great Sand Dunes, and the huge Pacific Ocean monument to name a few - all places, that, I'm sure, are probably poor when it comes to extractable resources, but potentially rich in history and natural knowledge. Even Redwood National Park is getting a significant enlargement in the addition of the Mill Creek Watershed, despite its being substantially logged. Ultimately, there is some good in everyone, and every nation. It's just a matter of finding it.

I've not heard this stated very often. If anything, Kahn's name is
often used as one of the true believers in the potential of AM radio.
And some of his writings reflect particular insights not often represented.

But his legal wrangling on the AM stereo issue was tragic mistake.
Especially after the Kahn AM Stereo system was simplified to remove the
extraneous filters, it really was a great sounding system. A lot cleaner
natively than the others. And not nearly as hard on existing
transmitters as the Magnavox and Motorola systems were. Requiring less
esoteric tuning. Had he gotten out of his own way, Kahn could have
widely demonstrated everything he'd espoused for years.

I've got blue boxes in all my racks. Most have been upgraded with
wider, lower noise chips, and higher quality caps. And some multi-cap
bypasses, after Walt Jung. But, for the most part, they're bulletproof
designs. Not always the highest fidelity, but like Shure microphones,
always ready to work and impossible to make sound bad.

>> Although Orban's name pops up in some of the most interesting places.

That's one of the things I respect about Orban: Unlike some
'professionals' who lurk here, Orban's not so aloof that he's unwilling
to participate in relevant discussions.

>> Remember Kevin--the AM Stereo advocate who was all over the broadcasting

Now, that was cold. Kevin may be clue free about many things, but
his advocacy of AM Stereo was/is based on a couple of key points: better
audio, and compatibility with existing systems, without any interference.

Had he been on the scene 25 or 30 years earlier, he would have done
more than teh industry in promoting a really good idea.

LOL! Well, you ARE a consultant, after all. You're required to
respond to yourself at least 30% of the time. Or as in the case of John
Lund, 70%...because no one else wants to listen to him.

BpnJ,

While you may Fully Understand the Words and
Their Means as Written in the US Constitution.

For many a 'common man' Symbols such as
The US Constitution and the US Flag :
- - - Are Equally Very Real To Them [.]

While I can understand your 'intellect' with respect
to the Words : You seem to Fail to understand and
Grasp the "Feeling" that others Attach to these
Symbols-Of-America.
- - - And For Many : Feeling Are Facts [.]

Beyond The Words - Symbols Have Meaning [.]
- - - Yes It Is That Simple !

OBTW - I did not even have to say anything personal
{impugning the nature of your being} directed at you
such as : demagoguic; your aimlessly winding blather;
frustrating amalgam of silliness; intelligent discussion
will instantly roll their eyes; -plus- stop drooling on
yourself. -and best of all- "emotional rather than
rational reaction"
- - - Our "Choice" Of Words Says A Lot About Us !

God {Allah} Bless America and
Our All American Symbols - Amen ! ~ RHF
.
.
. .

I understand perfectly. That does not make it right to deny a person's rights because someone else (perhaps you) is offended. I am offended every day by what many poltiicians say, as well as occasionally by what many private citizens say - but I absolutely believe they have the right to express it.

> While I can understand your 'intellect' with respect

And that is the saddest part...people are readily willing to discard objective truth in favor of their feelings and beliefs. This is the basis on which the suffering of others begins. History is thick with problems resulting from subjective opinions.

The wiser Republicans in Congress recognized this, and voted accordingly. Bravo to them.

Your choice of words says you are not a clear thinker, and that you believe it is OK to ramrod your beliefs down the throats of others who disagree by illegalizing their own freedoms. I have no trouble stating

my admittedly negative opinion on that perspective, and anybody who upholds it. It is Un-American and not befitting a great democracy.

Bruce Jensen

> at a rapid rate.

To some extent, yes. But the fact is that AM started losing teens in the
late 70's, and as that group matured, very few of them had any use or
history of use of AM.

>> You did no make a personal judgement. You made a stereotypical comment

And that is the crux of the argument. By the definitions used by the US Government, the legal system of the US and by the defintion of the term, I _AM_ Hispanic as the term relates to the culture of the individual, which can be determined by a variety of factors. The US Census considers me Hispanic, in fact.

I have been with randomly recruited groups of hip hop partisans, and don't find them any different than the fans of CHR in the 70's or 80's. Clothes are a bit different, but just typical people in a particular age group. No weapons, no drugged out looks, no anit-social behaviour.

>> And that is your opinion. Tens of millions of people in this country do

No, it is opinion. How can subjective judgment based on taste be a fact?

I asked. Cues were things like the language the door was answered in,
observations on language used with other family members, etc.

It's not based on taste at all. Hip hop would stink even if I liked it.
It would stink even if everyone liked it.

Not likely. Fake or otherwise, the cues also included observing whether an English or Spanish newspaper was in the home and visible, what kinds of books, if any, were visible (English or Spanish), etc. Even the neighborhood counted (one not appealing to Continentals was a factor).

FM had something new in 1942, also. It sounded better, and had unique
programming in many cases. It did not impact.

It took three years for just 100 stations to adopt FM stereo in the 60's...
hardly an instant hit. The FCC authorized regular stereo FM to start on
6/1/61. WEFM Chicago and WGFM Schenectady both started on that date.

All *I'm* doing is writing on a newsgroup, and regardless of how strong my terms may be, it is only writing. *You're* the one who wants a Constitutional amendment to remove an existing right, criminalize free expression and subvert the First Amendment, making the document arguably internally inconsistent. Which do you think fits the ramrod description better?

I'm done - vacation plans await. You may blather at will.

Again, someone with an opinion. Your opinion does not make the world change. It is just your opinion, and those who do like the music disagree... which does not make them any "righter" than you are. It just means they have different taste.

I may have asked this, but then, I'm sure I've slept since
then...when are 2.0 design spec receivers expected to hit retail?

Based on the Radio Shack announcement, late August or September.

Well, that RS is involved isn't encouraging, but at least I can go
give it another listen.

Truth be told, I'm not impressed with AM HD. I believe I've
mentioned that. :)

If, in fact, as you suggest, that there are some heavy hitters
working on the quality of the output, I'll be interested in giving it a
fair hearing.

I would be more encouraged, however, if there were actually something
worth listening to on it.

What's self-centered is the disparagement of all artistic standards simply because the music you happen to like cannot stand on its own merits.

Hip hop stands on its own merits. It is original, very authentic and
reflects its audience.

You just don't see it because you, personally, do not like it. That does not
make it devoid of merits.

I'll say this much: the marketing of hip hop is original and extremely
impressive. I mean these guys are GOOD! Seriously, if I made it worth
their while they could have the young people of America clamoring to
spend their last dollars on recordings of my farts and belches. Yes,
they're that good. Marketing is one powerful force.

>
> You just don't see it because you, personally, do not like it. That does not

No, my attitude toward hip hop does not make it devoid of merit. Let me
repeat: My attitude toward hip hop does not make it devoid of merit.
Hip hop has no merit, but that is completely independent of any
attitude I have or lack toward it.

1072. New DX Show - the "Australian DX Report" on WWCR, Nashville, Tennessee

Newsgroup: rec.radio.shortwave
Date: 2006-07-06 18:35:52 UTC
From: dxAce <dxAce@milestones.com>
Message-ID: <44AD5808.9F7ABB0D@milestones.com>
Source record: 82109

MEDIA RELEASE

*** For immediate distribution! ***

A new weekly non-commercial DX program, the "AUSTRALIAN DX REPORT", produced by the Electronic DX Press Radio Monitoring Association, in Melbourne, Australia, has commenced on shortwave over Worldwide Christian Radio (WWCR), Nashville, Tennessee, USA.

This new 15 minute show, produced and hosted by Bob Padula, extends coverage of the "Radio EDXP Worldwide Broadcasting Network", with prime-time transmission into major listening regions via 100 kW transmitters.

The show concentrates on HF broadcasting, including schedule news, monitoring notes from EDXP members, propagation information, supplemented by content sourced to EDXP partners.

The first release of the show is on Sundays, at 0200-0215 UTC, on 5070 kHz.

There is a repeat on Tuesdays, at 0945-1000 UTC, on 9985 kHz.

5070 provides good signals at 0200 UTC across the Americas, at 9 pm Central Time, and throughout Europe during the early morning. It is also audible in Africa, the Middle East, and Western Asia.

9985 provides super-strong signals at 0945 UTC across Australia and the Pacific (7.45 pm in Melbourne) as well as during the early morning in the Americas (4.45 am Central Time), and into Europe, the Middle East, and Africa.

The show is also simulcast in real-time via StreamingAudio at 0200 UTC and 0945 UTC, for Internet coverage, and can be accessed at http://www.wwcr.com via the link titled "Listen on Line".

It's included in the WWCR Program Guide, at the above URL.

Fully detailed Radio EDXP 10th Anniversary QSLs, showing colored scenes and wildlife in Australia, are offered for the SW transmissions. "QSLs" are NOT issued for the Internet stream or for reception via the Internet over PCs using remote "DX Tuners"

Reports should be sent to EDXP, 404 Mont Albert Road, Mont Albert, Victoria 3127, Australia, and return postage is required for QSLs to be sent via postal mail (US$1, 1 IRC, AUS$2 in mint stamps, or US$1 via PayPal). Return postage is not required for electronically delivered reports.

There is a template at the EDXP Home Page, http://edxp.org, where
listeners may send in reception reports using a simple form, and
receive Radio EDXP E-QSLs via the internet.

Reports can also be sent by direct E-mail, to

qsl@engradio.org

Good listening to the "AUSTRALIAN DX REPORT"!

http://www.trsc.com/ref_radio_swan_americas.html

I've seen that card sell for over $300 on eBay.

You might Google for other sites with info on Radio Swan and/or Radio Americas.

Though I heard them on SW when they were I unfortunately never sent off for a
QSL.

1160 AM, 50 kw, 2-tower directional from Isla de Cisnes, a Honduran possession SW of Cuba.

It operated with two names, Radio Swan and then Radio Americas. It was evidently a CIA "front" and appeared to be operated by the Gibraltar Steamship Corp, with an address in the Ingrahm Bldg. on 2nd in Miami. The manager was on Horton Heath.

I visited the Ingrahm Bldg in 62 or 63... and found that the office was essentially a mail drop. The office existed, but was the office of the "Secretar&#65533;a" of the&#65533;AIR, Asociaci&#65533;n Interamericana de Radiodifusi&#65533;n. I met a Mr. Ram&#65533;n Goicochea, a Cuban who had worked with Goar Mestre before the Revolution and was told that he could not give me much information.

Years later, in the late 60's, I was on the organizing committee of the annual convention of the AIR in Quito, Ecuador. Who showed up to manage things? Mr. Goicochea, who at that point admitted the station was funded by the CIA and had the support of the exile community in Miami, from where staff and supplies were ferried via private planes.

For many years, I had a reel to reel tape of the station recorded in Ohio on the night of the Bay of Pigs invasion... but the tape eventually disintegrated. It contained a lot of cryptic mentions, probably code words for the invading forces.

Several DXers in the 60's, particularly one C. M. Stanbury of Ontario, doubted the location of the station, and made much noise to prove its location in other places. So there is an element of black helicopter conspiracy here from the DX community. I am satisfied that the station was on Swan, based on Mr. Goicochea's information as well as having hired, later, some of the announcers who worked for Radio Americas and who later worked for me at WHTT, WSUA and WCMQ in Miami.

And to be honest about it I wouldn't even call it DX'ing, more like an interested listener.

I didn't really get involved in DX'ing for the pure fun of it until 1982.

1089. Expensive QSL's

Newsgroup: rec.radio.shortwave
Date: 2006-07-06 22:08:42 UTC
From: dxAce <dxAce@milestones.com>
Message-ID: <44AD89EA.BBEFC4@milestones.com>
Source record: 82126

** LEBANON. Glenn, DXers may be interested to know that a 1969 Radio
Liban QSL card has just fetched US$787 at an eBay auction. QSL cards
are well established as collectibles now, and recent price levels
(over US$50 each for AM/SW cards) would indicate that prices are
taking off.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=2174818678&category=38031

An average collection of, say 1000 cards from the 1960's to date, may
well be worth over US$50,000 depending on which stations are included.
I encourage all DXers to insure their QSL card collections, to make
bequest provisions to lodge them with club collections and
preservation groups or museums, or if they choose to put them on the
market, to be aware of their potential value. 73's (David Ricquish,
Radio Heritage Collection http://www.radiodx.com
Wellington, New Zealand, DX LISTENING DIGEST 3-092, May 27, 2003)

I've got one of those!

Vintage QSLs became valuable collectibles on E-bay, even $358 for
Radio Amï¿½ricas, Swan Island.
(THE SHORTWAVE YEAR IN REVIEW --- by Glenn Hauser for VOA, January 1, 2003)

Unfortunately not one of those!

Here is what the card looks like:

http://www.antique-corner.com/SWLQSL/lebanon3.htm

Mine is for reception on Jan. 6, 1970, 11790 kHz.

i will go on to add that is could be saidthat the flag reference "
violates the religous traditions of many of the folks that support it

1096. The President and the Press

Newsgroup: rec.radio.shortwave
Date: 2006-07-06 23:38:39 UTC
From: Kilo Lani <lookin@u.tv>
Message-ID: <12ar80ccl8urj3a@corp.supernews.com>
Source record: 82133

The President and the Press

You may remember that in 1851 the New York Herald Tribune under the
sponsorship and publishing of Horace Greeley, employed as its London
correspondent an obscure journalist by the name of Karl Marx.
...
If the press is awaiting a declaration of war before it imposes the
self-discipline of combat conditions, then I can only say that no war ever
posed a greater threat to our security. If you are awaiting a finding of
"clear and present danger," then I can only say that the danger has never
been more clear and its presence has never been more imminent.
...
I am asking the members of the newspaper profession and the industry in this
country to reexamine their own responsibilities, to consider the degree and
the nature of the present danger, and to heed the duty of self-restraint
which that danger imposes upon us all.

Every newspaper now asks itself, with respect to every story: "Is it news?"
All I suggest is that you add the question: "Is it in the interest of the
national security?"
...
It was early in the Seventeenth Century that Francis Bacon remarked on three
recent inventions already transforming the world: the compass, gunpowder and
the printing press. Now the links between the nations first forged by the
compass have made us all citizens of the world, the hopes and threats of one
becoming the hopes and threats of us all. In that one world's efforts to
live together, the evolution of gunpowder to its ultimate limit has warned
mankind of the terrible consequences of failure.

And so it is to the printing press--to the recorder of man's deeds, the
keeper of his conscience, the courier of his news--that we look for strength
and assistance, confident that with your help man will be what he was born
to be: free and independent.

President John F. Kennedy - April 27, 1961.

http://www.jfklibrary.org/Historical+Resources/Archives/Reference+Desk/Speec
hes/JFK/003POF03NewspaperPublishers04271961.htm

The Left's Media Manipulators

During the Cold War, under Ronald Reagan's presidency, the United States
government paid special attention to Soviet efforts to manipulate world
public opinion against the United States.

They referred to these Soviet efforts as "active measures." A special unit at the United States Information Agency, headed by a top Soviet analyst, Herbert Romerstein, kept track of the most vicious Soviet tricks and exposed them as frauds to the public.
...
Today, new masters of disinformation have emerged in Iran, Iraq, and the Palestinian territories.
...
http://www.frontpagemag.com/Articles/ReadArticle.asp?ID=23245

If the Left Weren't Hypocritical

Why is everybody in such a fuss over what to do about The New York Times's exposure of the government's secret anti-terrorist-financing program? Isn't there a perfectly good precedent for how it should be handled, currently on display in the form of Patrick Fitzgerald's CIA leak investigation?
...
What have we heard from the people who so loudly demanded an independent investigation of the exposure of CIA employee Valerie Plame Wilson's identity? Not much.

Pre-9/11 Iraq How-to Manual Directed al-Qaeda Operatives In Afghanistan

This manual provides further evidence that the Iraqi military was active in Afghanistan and working with the Taliban. The Taliban harbored and trained with Al Qaeda. The information in the document matches media reports that U.S. intelligence sources believed the IIS was training Al Qaeda in Afghanistan. It also matches information from other IIS documentation that shows requests from Islamic Jihad groups in Afghanistan for Iraqi military assistance.

I have an extra 2010 for sale. works great. cosmetically has wear around the volume control but still overall good condition. whip is fine. sync works well.
I will include and AC adapter (not Sony) and antenna wire or whatever else you might need that I am able to include for free.
email me if you want some pics.

This is bad journalism. The reporter is suggesting a conclusion not
supported by facts:

''While the training manual revealed today by Fox News does not
mention the IIS agent's notebook, the manual does suggest an Arab
regime, most likely Saddam, may have provided the military help
requested by the Taliban and Al Qaeda.''

1117. 700 WLW responds to IBOC

Newsgroup: rec.radio.shortwave
Date: 2006-07-07 00:46:52 UTC
From: Grundig_Tecsun_Eton_garbage_! <gosmithwhisper@yahoo.com>
Message-ID: <1152233212.718402.201240@p79g2000cwp.googlegroups.com>
Source record: 82254

I sent this to 700 WLW's link, for questions concerning IBOC - it was very nice of Darryl to respond so quickly, but I think he dodged a lot of my questions/concerns::

Hello,

I have heard and read many negative reviews concerning HD/IBOC, especially, how it
will negatively affect nightime AM DXing. I live and Maryland, and very much enjoy
listening to Scott Sloan, but I am very concerned that it will be very difficult, because
tests with WOR, in New York, running HD/IBOC caused much interference with WLW.
Also, I understand that an HD/IBOC exciter, and possible expensive modifications
to antenna systems (to modify the bandwidth), along with a yearly fee to iBiquity, makes
this technology very expensive. Tests with daytime IBOC have caused much
adjacent-channel interference, poor quality transmissions from the digital sidebands
dropping out (it's all-or-nothing with digital), and poor penetration and coverage of the
digital signal. Luckily, nightime IBOC, has not yet been approved and, hopefully, never
will. Was your station pressured by Clear Channel and iBiquity to run IBOC ? Also, I
have read that a number of stations have turned off HD/IBOC, because off listener
complaints and adjacent-channel interference. I hope your station doesn't
"shoot iteself in the foot", by running HD/IBOC, thereby cutting off many AM DXers !
I would appreciate any thoughts on this, when you get a chance.

AND the response from Darryl at 700 WLW:

Actually, one of the first IBOC test stations years ago was 700WLW. The system has been improved a lot over the years. The interference comes from the digital signal being on the sidebands of the main carrier. One of the things that Clear Channel has done has required the AM's roll off at 5k, which actually is a good thing reducing interference and allow the smart stations to make the signal more dense and loud.

You are correct with the issues in digital transmission...it's either there are not and this with lower power stations may still be an issue. As far as antenna modifications for bandwidth, being a non-direction station 700WLW is OK with minor issues. We did have the HD signal on for a few weeks a few months ago and did turn it off because of processing issues. The new equipment has arrived and at some point we will begin experimenting with HD again.

Although, there are problems, no pain...no gain. We live in a digital world. We all need to embrace the future...or it will run us over.

Thank you for listening. We'll continue to make more.

Darryl Parks

Gee, I have probably that many from a hundred countries that I neglected
to send in for a DXCC in the 50s. You just never know what junk will
turn out to be valuable.

I wonder where they are. Probably tossed out in some move.

I even got a nice handwritten letter from the USSR asking me to send
a Vibroplex bug, in exchange for genuine Russian postage stamps.

One of the more mysterious letters in my high school ham career.
An early Nigerian dictator.

Still have that reading comprehension problem I see.

In essence, what he is saying is that, *economically* speaking, we have *already* surrendered to Beijing.

Until people in this country are willing to work for 50 cents an hour, work 12 hours a day, have no benefits and few or no environmental controls, -ECONOMICALLY-, the Chinese *do* own us. (85% of the crap on the shelves at Wally World is made in China; Guess what? That's 85% that's *NOT* made in America).

...and that's to say nothing of the hundreds of billions of dollars of our government paper (T-Bills/Bonds) the Chinese own. They do literally own a large portion of us.

Get your head out of your infamous laughing ass long enough to look at the downsizing and outsourcing going on around you.

Oh, and if you keep your head out of your laughing ass a bit longer, don't forget to thank your boy Bunnypants for:

a) saying "Outsourcing is -good- for this country" and

b) giving the Chinese "Favored Nation/Permanent Normal Trade" status.

I was referring more to the illegal Hispanic community, though I suspect that the
legal Hispanic community is aiding and abetting the illegals.

yes it is that simple ~ dxAce

Continentals live predominantly in just a couple of neighborhoods on the whole Island, where there are English schools, bilingual staff in stores, etc. A neighborhood that is not favorable to Continentals would tend to indicate that the residents were all Hispanic. This, added to other observations, contributed to the "fill by observation, not by asking" that all interviewers used to determine the answer to the "Hispanic" question. In other words, they were looking for non-Hispanics, since there were so few of them and generally easy to spot because nearly none spoke English, they lived in ghettos, etc.

I asked why they did not ask all the questions verbally. This was because I had seen the forms, since I was on the media committee of the PRBA that promoted cooperation with the Census.

My "hard core leftist" to English dictionary translates this as follows:
"Some oppressors, including left-wing despots hostile to the United States,
have at times used "national security" as an excuse to clamp down. However,
merely invoking national security without any indication of tangible
oppressive behavior does not per se amount to oppression."

>
> If it can't stand the light of day we shouldn't be doing it.

A truly idiotic and naive statement. I'm sure many who have engaged in
covert actions all the way from the French Resistance to those who rescued
the woman reporter in Iraq would have found their efforts severely
compromised by the "light of day."

A more intelligent paraphrase would be "If ideologues in the press give it
the light of day, there's no point in doing it."

1138. S350DL black

Source record: 82275

Went to the local Radio Shack today and they are selling a new black version of the S350DL...This radio seemed so much better then the silver or red ones that are currently avaliable...The knobs and tuning dial seemed more solid than the previous ones, and even the case had a more robust feel to it...
Is this the same radio as always or has Eton finally addressed the quality issue that was lacking on the previous versions?...I wonder if they have incorporated better filters to help eliminate the image problem that used to plague the older models...Anyways I still do not think this radio is worth $100 but it sure looked nice in the black coating...

Cheers

Greg

In a move I have come to regret, I threw away my BCB QSL cards years ago. Of course, I filled that space with stuff much less valuable. Anyway, I think I kept that one card. I'm sure I did, in fact.

Message-ID: <nOprg.4924$cd3.3432@newsread3.news.pas.earthlink.net>
Source record: 82291

Russian regulators have forced more than 60 radio stations to stop broadcasting news reports
produced by Voice of America and Radio Free Europe/Radio Liberty, according to radio managers and
Russian officials.

The regulators cited license violations and unauthorized changes in programming format. But senior
executives at the U.S.-government-funded broadcast services and at the stations blame the Kremlin
for the crackdown, which has knocked the reports off stations from St. Petersburg in western Russia
to Vladivostok in the Far East.

You are so right about the quality control issues and image problems.
I wonder, if they have addressed the drifting problems that still
exist, despite their kludged fix to the latest models (analog will
always drift, anyway). The S350 is a real piece of crap, but you had
better watch out, for this newsgroup, anytime you post something
negative about cheap SW receivers (especially, the S350), you get a
whipping ! I don't think the radio is even worth $50.

On a number of occasions, stations have run their IBOC all night. In
most cases this seems to involve major stations operated by major groups
such as Clear Channel. As much as some people may dislike Clear
Channel, they are not known for violating FCC technical regulations. [0]
I suppose in one or two cases there's been a simple mistake or failure
of a timer, but I have to think in most cases these stations have some
kind of temporary authority from the FCC for testing purposes.

(in most cases I've heard of, the IBOC is staying on *all night* -
including between sunset and midnight - not just during the experimental
period when it might arguably be legal without STA)

>>Salem Broadcasting (WMCA-57 and WWDJ-97 AM) are holding off on IBOC for
>>now....

Indeed, Salem reportedly *removed* IBOC from WIND-560 Chicago when they
acquired it from a different owner.

I remember reading in one of the late 1960's electronics magazines
about a visit by the editor to the facility on Swan Island, after which
the station went off the the air. I think it was Tom Kneitel (sp?)
who edited Electronics Illustrated and also one of the CB magazines (S9?).
(My copies of Electronics Illustrated are buried too deep in storage to
find it any time soon).

In response to your contant naming of Eton E-1 as "Numero Uno",
perhaps the Collins R-390/390A is the all-time Numero Uno. Of all the
radios I have had, this one is the KING.

And you can't run regularly scheduled programs.

But some of these nighttime IBOC tests are being heard between sunset
and midnight - *before* this "experimental period" kicks in.

If you look at the reviews for your Grundig radios on Amazon, and show,
"lowest ratings first", you will see what I mean. Aside from the 350,
I think the biggest piece of crap Grundig is the G2000A "Porsche" model
- this is the best example how Chinese-made Grundigs are all about
asthestics, and nothing else. Sorry...

In an interview with Larry King taped and aired yesterday, GWB presented himself with unusual aplomb, Laura at his side. He came across very well on all counts; his weakest response was, perhaps, his discussion of how well prepared the nation is for another season of natural disasters, but it wasn't horrible. Whether all of what he said was true or not is debatable, but this can be said of any politician, or human being for that matter.

Larry was very polite but straightforward, with no strong curveballs. In that case, both parties got along beautifully.

Crappy reasoning. The GOP didn't control two-thirds of the Senate, then or
now. Even if every man, woman and child except you in the USA was clamoring
for Clinton's head on a pike for much more serious and blatant offenses,
there isn't a Democrat in the Senate who would vote to convict.

Oh here we go again ! Look at the reviews on Amazon - they certainly weren't written by me ! Look at all the, "lowest ratings first", reviews for the various flavors of the S350 and you will see that Chinese-made Grundig/Tecsun/Eton receivers have quality control problems. Ever since Grundig stopped making their receivers in Germany, and started making them under slave-wages in China, they are junk. I looked at the Eton E100 and those pieces of crap Grundig emergency crank radios at RS, and they were absolute garbage. There are many reviews, were the cranks have broken off, and the radios don't pick up hardly anything. The quality of the Eton E10 seemed ok, but it was way over-priced, at $120, for a non-SSB, single-conversion receiver; I might have considered purchasing it, when it went on clearance for $50. The point being, I grew up on Knight Kit Star Roamer and DX-440 receivers - ever since the Sony 2010 and DX-440 were discontinued, there hasn't been one quality portable receiver made; al of the receivers today are cheap plastic. What is hilarious about the S350 and E10, are all the useless/fancy switches, that try and make up for the receivers' shortcomings - that damn IF-shift switch, on the E10, because it is a cheap single-conversion receiver (if it was a decent dual-conversion receiver, the switch would be unnecessary, plus, I have read that the antenna trimmer is almost useless, being that it can always be left in one position). Grundig - fancy switches and a lot of glitz ! The S350 filters only muffle the audio, but they sure look good ! The Eton E5 is priced at $150 - the Degen 1103 has the same features for only $45 + $25 S&H and is built around the same case ! Case closed !

That is the EXACT same reasoning used by bad cops to justify illegal searches.
"If you aren't doing anything bad, you won't mind our poking around."

Good ! You are the one that keeps responding to my posts with your
little, "Eton E Uno is Numero Uno!!!" ! I have not insulted anyone,
but if you take my opinions of cheap plastic receivers, personally,
that is your and anyone elses problem ! Hey, take a lokk at your
statement, "Everyone in here considers you a mentally challenged troll"
! YOU and others, are the ones who have taken this to a personal level
! What's the matter - didn't your read the reviews, that I suggested,
or if you did, let's hear your, "personal", comments !

AND your statement, "Now if you were smart" - I am supposed to feel
intimidated, or something ? Do you think I care, what YOU think, or in
one little way, feel intimidated, or give a damn, if you post insults ?
Actually, the whole thing is rather amusing, that my posts are taken
so personally. You see, if you felt confident about your little
plastic receivers, you wouldn't have to respond with personal insults !

Oh BH,

I worked for NSA, for many years, as both an employee and contractor, and can reassure you, that NSA has no boundries and has hundreds of databases full of USSID-18 (US citizen) violations and porography (which is passed around all the time). I worked for S, T, and Z Groups (cryptography) in the OPS2B, OPS1, and R&E buildings at Ft. Meade. NSA has a history of USSID-18 violations, dating back to the 1960s, and, basically sucks in all it can get. They have had these types of illegal programs going on for years. In the end, either NSA will, "do it to themselves, or will be shut down by strong encryption. NSA is a hostile and very dysfunctional place to work, where anyone's special access clearance TS/SCI/full-scope poly clearance can be pulled for no reason. Russ Tice was a recent NSA Whistle-blower, where NSA security forced him to take a psychological test, and of course, failed him. NSA is nothing like what people on the outside think - they don't have, "magic bullets". I now am associated with other Intel agencies, whose missions are to collect against only foreign targets. So, I guess you don't know everything !

That's not a good development. Can we expect them to start jamming
shortwave next?

I guess we can thank ABC for this happening. According to the Washington
Post there are only 4 stations out of 42 that are left broadcasting the
VOA. Here is the end of the article linked in the post.

By Peter Finn from the Washington Post
Updated: 1:41 a.m. PT July 7, 2006

"Last year Radio Liberty journalist Andrei Babitsky interviewed Shamil
Basayev, the Chechen warlord who asserts responsibility for the
hostage-taking at a school in Beslan, which ended with the deaths of 331
people, most of them schoolchildren. Radio Liberty opted not to run the
material, but it was later broadcast on ABC's "Nightline." The Russian
government was outraged and decided not to renew the accreditations of
ABC journalists.

Staff and management at Radio Liberty, Voice of America and their board
of governors suspect that the dispute led the ministry to act against
the news organizations."

You should write Amazon and tell them about this guy. Maybe they will
remove the negative reviews.

You could write a positive review to counter the negative ones.

This guy would never get a high level clearance and posting about it
here would finnish it if he did. You don't broadcast that you have a
clearance that's like painting a target on your back and going to gun
range. Silly nut case.

> suspect tere may have been one or 2 over the years I simply can't
> recall any)

Of course you don't. I wouldn't expect you to acknowledge them in
any case.

I've started threads for the specific purpose of "cooling off"
with you and you've blatantly trashed each and every one of them.

> > yet you prefer to continue your deceptions and deviant
> > behaviour, ...
>
> alegedly (by your own words you do not care about my sexlife

Yet YOU keep brining it up.

> so which of those staments is a lie?

Any one generated by you is a lie, Mork.

> >...along with your profanities and abuse of The King's English.
>
> I realy don't care about the wishes of the english crown (which is held
> by a lady and therefore the Queens english would seem more appropate)

Yet another lie, Mork.

You've repeatedly tried to imply that English Common Law was the
only valid law. Ergo you obviously DO care.

I can dig some of those posts up and rub your nose in those too,
if you care.

> > > >That
> > > > was made abundantly clear on "day 1" when your very first post to me

>
> you were saying something like "all techs were lazy" (or words to that
> effect) which was and remains of course a lie

Mork, WHY do you insist on trying to perpetuate yet another of
your lies?

I've never said such a thing.

You're welcome to try and find such in archives, but you'll only
die tired doing it.

> > It had everything to do with an emotional, uneducated retort from
> > you.
>
> indeed one gets a bit emtotional when insulted which was of course your
> intent

Nope.

It's all you can do, Mork.

You can't respond with RATIONAL responses, so everything is "lier"
and other such silliness.

> and so you bitch about geting EXACTLY the response you wanted

Nope.

> > So...From the very "git-go", YOU have been the abuser.
>
> you are the one the threaten murder over morse code

And here you perpetuate yet ANOTHER of your lies, Mork.

> enaged in blackmial and stalkingover the years

And another.

> and still dsipte the facts you can't let go of YOUR Vendetatta

And still another.

> > > > The rest has been "you reap what you sew..."
> > >

No...YOU are the one typing "bull####". I just refuse to quote the
profanities.

> > And you're the proof.
>
> I never made sexuality the main subject of this forum you did

Nope...YOU did.

> you have called all the regluars that have opposed you homosexaul
> pedophiles or zoophiles (except Bil Sohl you spared him for some
> reason)

Jim Miccolis has "opposed" me before.

So has Hans.

Frankie of Silliland.

And a whole host of others.

The only ones who don't get so-labled are those who have obviously
demonstrated predisposition to pedophilia...Such as you and Toidie.

> Who's in a hurry?
> > >
> > > I am
> >
> > Then you compound your stupidity with sloppiness.
>
> so I am sloppy it suits the medium

The medium has nothing to do with it.

You only use it as an excuse.

Of course your life is one slapped together excuse after another,
so what's one more, right?

> > > I don't like wasting time on your libel
> >
> > What libel?
>
> your claims I am child molestor, rapist that my wife is male that I
> have AIDS or other STD that I am welfare

Uhhhhhhhhhhh...so far you haven't cited anything that's not been
proven otherwise, Morkie.

> and more

I am sure there is.

> > > > > you replies get the attention they desrvse very little
> > > >

> > as a statement. More proof that your assertions about multiple college
> > degrees is false.
>
> no it proves I am sloppy about typing but you know that

No, it proves you're lazy.

> grow up and move on

No...YOU grow up. Act like an adult. Use some of that alleged
education that you never got.

> or don';t and show yourself as the agressor again

Who's the "aggressor"...?!?!

Me, or the guy who keeps re-addressing these post to a newsgroup
to whom the content is not germane?

> > Crappy writing like that would let you get out of 3rd grade unless
> > your daddy bribed the teacher or mom rendered "favors" for the
> > principal to let you out.
>
> but this isn't a school roomand your are not a teacher or other
> authority I need to satify

Yes, I AM a teacher. And if you were in my class, you'd be
spending a lot of time in suspension.

> and more libel on your part about my mperant

About your WHAT...?!?!

What's an "mperant"...?!?!

> we aren't you man enough to keep your attack between those in the NG?

This taunt coming from a putz who keeps readdressing these posts
to a non-germane newsgroup!

And Morke...Your grammar is worsening by the minute!

> No, you don't.

"No, you don't"....what...?!?!

> > > yes I do
> >
> > Nope. Not a one.
>
> sure I have em and since you offer no proof I don't you agree

You are not a degreed person, Morkie.

Until you provide some reference to an established educational
institution that can be verified, each and every time you insist that
you have a college degree you're simply lying.

It really is THAT simple.

> > > > Not a single one.
> > >
> > > your assertion you prove it
> >
> > The "three degrees" assertion is YOURS, fatboy.
>
> more of you trying to libel me about my weight

It's not libel if it's true.

Go ahead...Take a head-to-toe picture of yourself holding today's
"USA Today" paper and post it here.

Do it...Prove me wrong.

Make an excuse, prove me right.

Fatboy.

> > I call you a liar.
> >
> > YOU prove me wrong...C'mon, fatboy!
>
> no

Then you prove me RIGHT, Mork!

Thanks!

> >You can do it!
>
> meaning you already it to be true

Huh?

Let's keep this in English, Mork.

> >Just give us
> > the name of the institutions that granted you a degree and the year it
> > was granted.
>

> no you are realy stupid to think I am going to help you stalk me
>
> I refuse

You "refuse" because the answer is "Mark C. Morgan, KB9RQZ, does
not have a ollege degree from any institution at any degree level in
any discipline"

> > So far, I've done some searching in Illinois and come up with
> > nothing.
>
> of course you did not I never attenedd school in Illinois

I doubt you "attenedd: school anywhere.

I imagine you were kept at home...Much like Oswald Cobblepot.

> but you are admiting to stalking me

Nope.

YOU have insisted that YOU have college degrees.

YOU refuse to identify by whom.

I am using PUBLIC RECORDS to prove you a liar.

So far. it's working!

> > Michigan either.
>
> why look there? you know I am in my 40's when I arived in Michigan

So?

What does your age have to do with where you receieve a college
degree?

> more stalking steve

None at all, Morkie.

> > I found one "Mark C. Morgan" currently
> > enrolled but he's only 21.
>
> curently enrolled obvoiusly can't be me

Duhhh...ya think? Or was that age of 21 a give-away?

> > I found another but he'd be over 65.
>
> realy that is all you found I supect then your search was half hearted
> at best

You're right about that. I don't obsess like you think I do.

I've not turned up much, and I doubt I ever will.

You're lying about your degrees.

Period.

> > > > You brag about all these "degrees" you have, but can't seem to
> > > > name a single public or private educational facility from which
you've
> > > > graduated.\
> > > >
> > > > I certainly can name them
> > >
> > > No...You can "make them up".
> >
> > come now steve you already admiteed I could name them

Nope. I said you cold make them up.

> you can't keep your lies staright for even a single post

You can't comprehend English for a single post.

> > Anything you name would be
> > ficticious.
> >
> > more of your libel

It's not libel when it's true.

> > Unless you can prove otherwise.
> >
> > and now you are making the delusional claim that my (sinible) refusal
> > to help you stalk me alters reality itself

"sinable"...Yes, Morkie...You are one of the most sinable people I
know!

> go get mental help not well trained enough to know exactly wht is
> wrong (most likely just that you are patholoigcal liar) but obviously
> you must need mental help if you think I am going to help you stalk me

HOW do you think telling us what your college degrees are is going
to do to "stalk" you, Mork?

I already know what you look like, where you live, and a whole host
of other information I am sure you'd rather I not know.

You won't "identify" you college degrees since you CAN'T. You
don't have any.

> when we first "met' you showed enough skill to provoke me to unwise
> statements but no longer

Yetr another untruth, Morkie.

You continue to make "unwise statements" to this very day.

For example..."I have three college degrees" is one of them.

> > > >Your suggestion that it's an attempt to prevent "stalking"
> > > > is a blatant lie.
> >
> > > Maj you stalk everytone that dares to post on RRAP
> >
> > Who's "Maj"...?!?!
>
> don't you know Maj?

There you go again.

> > And what's an "everytone"?
>
> can't you figure it out?

I am sure I can. Just love making fun of an idiot who says he
has three college degrees yet can't demonstrate the skills or knowledge
of a 3rd grade education.

> > > > You have NO secondary education beyond high school, Mork.
> > > >
> > > porve but then you can't prove it anymore than you can prove any of
> > > your libel
> >
> > What libel?
>
> asked and answered

Asked but avoided.

Nothing I say about you is "libel"...It's not libel because it's
true.

> > So far YOU have insisted that you have three college degrees
> > despite being obviously incompetent in English, among other things.
> >
> > YOU would prove me wrong by listing the names of the institutions
> > and the dates you "graduated".
>
> you have already proven that statment a lie in this very post

Nope.

YOU have proven that your asserions of multiple college degrees was
a lie, Mork.

> > But I guess that's too much for you.
>
> Indeed I m far to smart to help a stalker like you

But obviously not smart enough to keep from making a fool out of
yourself, Mork.

You're doing THAT very well!

> do your own research or better still get a life

I am doing just fine.

So far...You're the loser I have always claimed.

As for a "life"...I see that you're still wasting the whole day in
RRAP.

> > And by failing to answer this and making some assinine allegations
> > of "stalking" to avoid it, YOU prove my assertions.
>
> indeed you are nuts

Nope.

You claimed you have college degrees.

You won't prove it.

You can't.

> > > > No, you didn't, deviant.
> > >
> > > yes I did
> >
> > Nope.
>
> answered years ago

Nope.

> > > you just don't like the answer
> >
> > How can I "like" what you didn't provide?
>
> I don't know but you question has nothing to do with the facts

Your sentence has nothing to do with English grammar.

> > > then you made another of yoursexaul remarks about it

Nope.

> > There's nothing "sexaul" about your non-answer.
>
> there was till cut from your reply

Nope.

> > > > You've not answered what a "feild" is.
> > >
> > > yes I did
> >
> > Nope.

>
> yes I did

Liar, liar, Morkie!

> > > I have answered that one years ago you just forgot the answer
> >
> > Nope...You've never answered the question.
>
> lying again I answered that question for you

No, you did not.

> > > I don't repeat my answers for you unless it suits me
> >
> > You can't repeat what you didn't state in the first place.
>
> indeed that is true a stament but it is has nothing to do with this
> case where you werea answered long ago

It has everything to do with you making up tales about things you
allegedly did.

In other words...More lying on your part.

> > > > You've not answered what it was that I allegedly "quit".
> > >
> > > did years back
> >
> > "years back"...?!?!
>
> yes years back

This "argument" is only "months" old, Fatboy!

> don't you understand the idea of time

Sure I do.

YOU are the one with a problem.

THIS argument is only two MONTHS old. Not "years back", fatboy!

> > Morkie, it's only been the last couple of months that you've been
> > insisting that I quit some "feild".

> so?

So you AGAIN show that YOU are not in touch with CURRENT EVENTS!

> I have answered the question about what it is and why many times

No, you've not.

> > You refuse to define what a "feild" is.
>

> if you like

It's not what I "like", Mork...It's just yet another example of
your incompetence with the language.

> > > > > > Exercise at least ONE of those alleged college degree,
Mork,
> > > > > > scroll back and answer the question.
> > > > > >
> > > > > > I did
> > > > >
> > > > > No, you didn't
> > > >
> > > > yes I did
> > >
> > Nope.
>
> yes I did

More lies, fatboy.

> > > > > > > > What's a "feild"...?!?!
> > > > > > >
> > > > > > > > you don't know?
> > > > > > > > so much for your claims to have been a soldier

> >
> > I LOVE it when you mispell words in a "sentence" wherein you
> > presume to call me a fool or some othersuch adjective!
>
> unlike you I don't claim any skill at spelling

Sure you do! You repeatedly claim that you are perfectly
competent with English grammar, construction and comprehension when
it's PAINFULLY clear that you are none of that!

> > You DO love to make my arguments for me, don't you, fatboy...?!?!
> >
> > > > > > > Now, WHAT is a "feild", Mork?
> > > > > > >
> > > > > > > you asked I answered
> > > > > >
> > > > > > I asked, you have yet to answer the question competently.

> > >
> > > sure have years ago
> >
> > No, you've not. THIS "argument" is only 2 months old, Morkie!
>
> so?

In the foregoing you accused me of not being familiar with teh
concept of time.

This is the third time you've responded to the fact that this is
an argument that is only "months" old (not the 'years' you keep
suggesting) with "so?"

You only serve to prove yourself a fool, Morkie.

> > > > > > > from you Maj
> > > > > >
> > > > > > What's a "Maj"...?!?!
> > > > > >
> > > > > > don't you know
> > > > >

> >
> > "Everyone" does...?!?!
>
> yes even you

Nope.

> > What's a "Maj", Morkie?
>
> you know

No. I don't. What's a "Maj"...?!?!

> > And define this NEW word you've created, "yothis"...
>
> why?

You choose to be misunderstood?

> > Why don't you quit lying to us and yourself and install a
> > spellchecker so you can stop looking like the idiot we all KNOW you
> > are, Mork?
>
> auf anglish bitte steve

You're no more competent in German than you are English, Mork...So
why pretend?

> > "I Am Laughing At The Superior Intellect..."
>
> indeed you are
>
> that is why you are a fool

Nope...It just means that YOU give me plenty of opportunites for
laughter.
> >
> > Putz.
>
> back to the sexaul comement boring steve

Only you would consider it a "sexaul" comment, fatboy.

> > PS...Let's see if you went back behind me and re-entered all the
> > profanities I "####" out...So THEN we can see who's obsessed with
> > anatomy issues!
>
> nah I just do that to bug you

Doesn't bug me to let you make a fool out of yourself, Mork!

And you do it oh-so-well!

Steve, K4YZ
>
I don't know why you bother, Steve. Mark is not worth your effort. Look at
it from another angle, Steve. Who is Mark? Who IS he? He is a nobody, that's
who. You don't owe him answers, you don't owe him rebuttals.
Mark is a literal flaming idiot with little to do. Just ignore him, Steve.
He is not worth your or anybody else's time. He is a nobody. Ignore him.

And you know - it doesn't matter, you have no idea who I am. As a
matter of fact, NSA sell hats, shirts, sweatshits, etc., to its

employees to wear in public, moron !
And they are sold by an employee run organization, out of the OPS2B
building.

Bingo. I knew a guy who was canned from a previous
job for posting in a graphics ng about how the company
(no longer around in it's previous form) was or wasn't
planning on using Fahrenheit in their upcoming releases.

It only took 2 days for that to happen.

One can imagine if someone was posting this stuff
while employed would find himself/herself unemployed
really quick.

Like the (former) Coke employees who tried to sell
top secret data to Pepsi.

Yeah, I guess I have to use quotes around "unbiased" for some people.
Katrina was a big time GOP operative in CA. For those who know Asians,
they vote Republican because they think (and don't choke laughing) that
Republicans are tough on communism. Even the Taiwanese think like this,
even though Nixon kicked Taiwan out of the UN to kiss Red China' s ass.

I was at the NSA in Ft. Meade in the late 80's installing a system there. Armed guard to go to the bathroom, you could get shot going down the wrong hallway, ect. Buy hey, they had a beer vending maching in the cafeteria! The ol Starshell 3 system is probably still running there. And if you open one of the cabinets of the system there will be a "Homer Hanky" from the 1987 world series taped to the door.

Hates my guts, because I am brutally honest about your cheapo plastic receivers ! I think it is hilarious, because it shows that you all are being overly-defensive !

Remember to, "think positively about your Eaton Shit E1" !

AND

Remember, that all receivers, since the DX-440 and Sony 2010, are cheap plastic crap !

then you are a fool "Roger"

Steve does thius becuase he has to

his mind can not accept the facts
>Mark is not worth your effort. Look at
> it from another angle, Steve. Who is Mark? Who IS he? He is a nobody, that's
> who. You don't owe him answers, you don't owe him rebuttals.
indeed he would be happiest in Steve's Killfile but steve just can't
put me there he is so afraid of me
> Mark is a literal flaming idiot with little to do. Just ignore him, Steve.
> He is not worth your or anybody else's time. He is a nobody. Ignore him.
he can't ignore me

that is why he is mental case

NSA took out the beer machines, from the cafateria, years ago; their
logic was that they would rather have NSA employees drink, "on campus",
than go to one of the local bars. Alcoholism and depression are
rampant, at NSA; it is joked that NSA employees keep the
anti-depressent drug companies in business. There is a lot of
inappropriate behavior that goes on, especially, like sex in the
parking lots, in stair wells, and the famous ones about night-shift
workers, in the basement compartmented computer rooms. I am really
glad, I am out of there ! The chief of "W" Group, years ago, was caught
having sex one night, with a cleaning lady, on his couch in his office.
Bascially, it is a big city, with its share of crime.
Also, a chief of another group, was caught calling a bunch of 900 sex
numbers from his office.

I recently had a large all metal garage/shop installed, after setting up my radio equipment i
started on antennas. I have a AM reciever that has a external loop so i drilled a hole thru the
wall & run the leads out, installed the loop on a pole and started scanning AM band. It didnt
pickup like it should so i took it down, as it fell to the ground the station got real loud. I tried
picking the loop off the ground and the reception went away. Tried several times to put the
loop in the air but had to return it to laying ontop of the ground?

Yup ! I only did it at nighttime parked in neighborhoods, or when my parents were out of town on medical conventions. At NSA, one guy was seen during lunchtime, doing it in a pickup truck. Actually, I did it a few times in my parents basement, while they were upstairs, in the family room, watching T.V. One of the girls was a real screamer, so I had to put my hand over her mouth when I, "went down on her". Another time, my mother came down to talk to us, but we were totally nude, under a blanket - good thing she didn't have us stand up ! Now, was that funny ?

1239. heads up - on air test.

I am finishing up a new homebrew AM transmitter design for 160m this evening. I would like audio report and report on third harmonic as well. If you live within a few hundred miles of MA / RI and have a radio with a 6kc or better audio bandwidth then you should hear some good audio - I hope. Probably tomorrow evening at 2300ut near 1850kc-1950kc. I will post again befor 7pm east coast time. I am especially interested in any third harmonic emissions.

The term,redneck,as some people like to call us Southerners,,,,, that term comes from the old Southern democrat party back when they used to wear red hankerchiefs around their necks,hence,redneck or rednecks.In the old Capitol Museum here in Jackson there is an article about that.I am a Southerner,born and raised,but I dang sure am not a redneck.In some ways,I am just as Yankee as many Yankees.Most people who watch that hollyweird crap on tv as pertains to the South and rednecks,they actually believe that hollyweird crap.They dont know the Truth and they dont want to know the Truth either.There is a Red Neck fishing lures factory (I assume it is still there anyway) in New Hebron,Mississippi.You can rest assured most of those people at the Red Neck factory are not red necks and not democrats and neither am I.

I'm pretty sorry to see others give you a hard time when you should be getting some props. I've been reading/lurking around this group for a long time and you are without question one of the top five frauds/nut cases I've come across. That's worth a lot! You are not quite ready for a Coast to Coast spot with George Snoory, but it's definately something to which you could aspire. Keep working; I see you on a round table with all of Snoory's other "intel operatives" heaping BS across the entire nation instead of just this NG.

You right, China can pass on the information they got from Bill Clinton.
No democrat need get involved this time. Good thinking.

Actually, I forgot to mention, that Coast To Coast AM, Scott Sloan 700 WLW, and Saturday Night Oldies 700 WABC are my favorite shows ! How did you know ! You are definately very amusing ! I would love a spot on Coast To Coast AM ! I did manage to phone into Scott Sloan, a few months ago, as he was talking about people hacking into wireless internet networks. I told him about how scanners could be used, about 10 years ago, when baby monitors, cell phones, and cordless phones were analog. I heard my neighbors having affairs (3 of them), on a cell phone one guy's girfriend threatened to call his wife, and I heard stories of how newlyweds would put their babies and baby monitors in their bedrooms ! On a cell phone, a girfriend was talking "dirty" to her boyfriend, and I thought he was going to wreck his car ! Hope to see you "lurking" around, with the rest of the highly-sensitive, cheap plastic SW receiver owners !

Kilgour-Matas report on Communist China's organ harvesting

"Based on what we now know, we have come to the regrettable conclusion that
the allegations are true. We believe that there has been and continues today
to be large scale organ seizures from unwilling Falun Gong practitioners."

Enter China: A New Act in World History

A report last June cited in the New York Times and quoted on the House floor • China graduates nine times as many engineers (600,000) as the United States (70,000) • was met in the United States with such disbelief that "a Duke professor had his students check the numbers." Just think of it: China, known not so long ago only for its silks and fine china, graduates nine times as many engineers as the United States

http://www.newsmax.com/archives/articles/2006/7/6/214643.shtml

You better make lots of babies and save every penny for college tuition.

China Spy defender under investigation

Less than one day after it was revealed that high-ranking intelligence officer Lonnie Henley publicly came to the defense of admitted spy Ronald Montaperto, Bill Gertz (Washington Times) reported that Henley himself is under investigation. Henley's he-didn't-really-spy-that-much argument exposed just how far "engagement" supporters were willing to go to defend their fellows.

Engineers who can read and write English . . .

Hundreds and Hundreds of Thousands of them

Do not expect great innovations from them - But

- Unless you are " hands on";

They Can Do Your Job....

Much Cheaper than you, BTW . . . .

Source record: 82408

Tucker,

Try using 50 Foot piece of Coax Cable as a feed-in-line
between the Loop Antenna and the Radio in the Metal Shed.

Start with the Loop Antenna Element about 3 Feet from
the Side of the Metal Shed and move it out in 3 Foot
steps; until you have very good AM/MW Band reception.
- - - Usually about 9-12 Feet away.

Try elevating the Loop Antenna Element about 6-9 Feet
above the Ground using an old Market Umbrella Stand
with a Wooden or PVC Pole for an Upright will do.

hope this helps ~ RHF
.

That kind of talk is so inappropriate - you must be really upset ! I
do have a question, though - with the E1's floppy antenna, can one use
duck tape to hold it in place, along with the flimsy knobs/switches,
and can a handle and MW and satellite antennas be constructed too ?
Maybe, this question would be better served by BH.

1274. (OT) : Miso - Rush Limbaugh May Have His Problems -but- Where Is Your Humanity ?

Miso - "several documents released today by
the Palm Beach County State's Attorney"
- - - Once again we see the PBC State's Attorney
{An Elected Democrat} using his office to smear
Rush Limbaugh {A Conservative} in the Media.

It is amazing to me that Robert Downey Jr's very real
Illegal Drug Problem was touted as a Medical Condition.
by the Liberal Hollywood and the Left-Wing Media Elite.
http://en.wikipedia.org/wiki/Robert_Downey_Jr.

While a scientifically recognized Medical Condition
such as "Erectile Dysfunction"
http://en.wikipedia.org/wiki/Erectile_Dysfunction
Is treated by Liberals and the Media as more evidence
of Drug Addiction by the Conservative Rush Limbaugh.
http://en.wikipedia.org/wiki/Rush_Limbaugh

Miso - You are a fine example of how Liberals and the
Left-Wing Media Elite once again show their Double
Standard when it comes to Personal Problems and
Information vis-à-vis their darling little Liberal friends
-vice- their hated Conservative enemies.

Remembering - Their But For The Grace Of God Go I !
- - - May God's Blessing and Strength Always Be With
Both Brothers Downey and Limbaugh - Amen !

Limbaugh is the poster child for sanctimonious, which is why people dump on him. He rants about the behavior of Hollywood, then goes on a sex tour. He calls Jerry Garcia a drug addict, but it turns out he is a drug addict himself.

It appears there are rules for Limbaugh, and then everyone else.

then you are a fool "Roger"

Steve does thius becuase he has to

his mind can not accept the facts
>Mark is not worth your effort. Look at
> it from another angle, Steve. Who is Mark? Who IS he? He is a nobody,
that's
> who. You don't owe him answers, you don't owe him rebuttals.
indeed he would be happiest in Steve's Killfile but steve just can't
put me there he is so afraid of me

Mark is a literal flaming idiot with little to do. Just ignore him, Steve.
He is not worth your or anybody else's time. He is a nobody. Ignore him.

I do not hate him that would be giving him power and attention he does
not deserve. I just think he is a nut case and put him in the kill file.
Some people will not behave of their own volition (it's called being an
adult) and instead have to be forced or punished. Behavior exemplified
by this individual is immature at best regardless of his age. You cannot
control these people in a public forum so the best thing to do is ignore
them. Let him ramble on to himself.

Look at it this way, if you met him in person in a restaurant you would
move away to another table and keep away from him in the future. You
would not befriend him or take part in his bizarre behavior.

Eventually the GOP turned on Richard Nixon, so I would assume the
Democrats would do the right thing if Clinton committed treason.

Take the case of William Jefferson. The Democrats got him removed from
Ways and Means after it was obvious the guy was dirty. Democrats eat
their own. The GOP, on the other hand, supports their criminals. Tom
Delay is a good example.

Apparently he "is" smart enough to be a news reporter. Did you here the President being being asked questions at a news conference about N. Korea? Some of the reporters were to stupid to figure out he was being sarcastic. Good old ABC being one news channel that was unable to figure that out.

Sorry to rain on your parade, but it was determined that the Viagra
prescription was legal and that all that was done was to use the doctor's
name to avoid embarrassment by filling such a prescription.

As I mentioned before, I have traveled several million miles and never had
any medicine questioned, so someone had it out for Limbaugh in WPB.

In the morning, at sunrise, three men will arrive at your home in a white panel van. You will go with them. Do not resist them. You are to spend the next two months at the Eton Reeducation Facility on the outskirts of Pocatello, Idaho. Upon your release you will purchase a third E1. You will love your new E1 and you will express your satisfaction with it in postings to this group. You will also recall how much you really dislike the old Sony portables you once owned.

You will begin again.

1306. Re: Radio America for Swan Island back in the 1960's

Newsgroup: rec.radio.shortwave
Date: 2006-07-08 04:49:16 UTC
From: "Matt J. McCullar" <mccullar@flash.net>
Message-ID: <gPGrg.621$2v.332@newssvr25.news.prodigy.net>
Source record: 82442

Tom Kneitel wrote an excellent article about R. Americas and R. Swan in _Electronics Illustrated_ in the 1960s. He and editor Bob Beason actually visited Swan Island when the stations were still on the air and Kneitel actually mentioned the controversy of the transmitters' supposed location (though he did not mention Stanbury by name). Kneitel reported on (and printed pictures of) the transmitters, the island, and the people living and working there. Kneitel wrote at the time that he had no doubt that the whole operation was a front for the CIA, working against Castro, and in fact not long after his article appeared the stations went off the air (I've read elsewhere on the 'Net that the tranmitters were sent to Vietnam).

I have scans of Kneitel's article. E-mail me if interested.

Sex tour? You know this, how?

> He calls Jerry Garcia a drug addict, but it turns out he is a
> drug addict himself.

He became addicted to a medication his doctor prescribed, a big difference from
Jerry Garcia who became addicted to drugs he prescribed for himself!

> It appears there are rules for Limbaugh, and then everyone else.

Appearences can be deceiving, and you Liberals are KNOWN for self deception.

http://en.wikipedia.org/wiki/Swan_Islands

Makes reference to transmitters being moved to Vietnam.

http://en.wikipedia.org/wiki/Radio_Swan

This one makes reference to the Radio Swan transmitter being previously used by
Radio Free Europe before being installed on Swan Island and then its being sent
to South Vietnam.

Ever since the 1970s, SWL has been in a steady decline - as soon as,
"Voice of the Andes", stopped broadcasting, I knew SWL was dying (VOA
was my favorite). Now, only third world countries are broadcasting
from the toilet and it is mainly religious garbage and nothing worth
listening to. Anyway, DRM will render today's analog SW receivers
useless, because unlike IBOC, it is all-or-nothing (only digital). I
wouldn't be spending a dime on new SW receivers. AM DXing is boss !

Right you are ! But, if you post anything negative about SW receivers, this newsgroup will give you a whipping ! Yes, RadioIntel determined that the Eaton Shit E1 is no better than the Sony 2010, or the Grundig Satellite 800. As a matter of fact, the E1 has a host of problems - the antenna flops, no handle, no MW or satellite antennas, flimsy knobs/switches, and does not even receive/process IBOC, or DRM. Since SW is starting to convert to DRM, and since it is all-or-nothing, the E1 will eventualy be receiving nothing. Grundig Chinese-made radios are absolute cheap plastic garbage; there has not been a decent radio made, since the Sony 2010, or the DX-440, both of which are much better quality than the E1, at $500. The E1 is assembled in India, but it is still under slave-wages; Grundig used to be made in Germany, which they want consumers to still think, but the sleazy Tecsun/Eton bought the rights to market products under the Grundig name.

Hold on, here comes the crowd (RHF and BH) !

As you may well know, another "feature" of the E1 is that the batteries
used to blow up, when used with the AC adaptor ! Eton had to recall
this plain-jane, quality $500 receiver. Got to love it - funny stuff !

Hell, even cheapo little Kchibo is now making receivers that will
receive DRM ! The E1, and the rest of analog SW receivers, are already
outdated, and eventually, will become useless !

http://www.kchibo.com/drm1.htm

The answer is it depends. There was a ruling that frequent flier miles
are not taxable even if they are earned on business trips but spent on
personal trips. I think the ruling is wrong, but I'm not paid off by
the airlines.

Hefner got in trouble because the jet was owned by Playboy, but used
for his own personal pleasure. If the jet took him from one Playboy
club to the other and he was performing some business function, then it
would be a business expense. If it took him to Aspen for the weekend,

then it is not a business expense AND it would have cost him money out of his own pocket to charter a jet for such purposes.

Hefner's case is decades old. Check out <http://www.pwc.com/us/eng/tax/ins/Insurance-Tax-Bulletin-05-47.pdf>

That document looks at it from the corporate tax viewpoint. For the "employee" viewpoint, check out: <http://www.irs.gov/pub/irs-pdf/p15b.pdf>

Of course, I don't agree with what is allowed, but then again, nobody is paying me off.

It's the One Percent Doctrine. If there is one percent chance that it is true, then pretend it is true.

What if a medical doctor used such logic? Example: there is a one percent chance you have testicular cancer, so I need to remove your testicles.

Of course, the neocons have no testicles, which is why they are constantly scared.

> Hi Lardass! Another lonely Saturday Night for you, huh? But aren't they all?

If you're referring to Mr. Davies, I don't think the post was by him.

He's on a well-earned sabbatical leave from Papa John's and has gone to spend a few months in the contemplative life at profit Stair's monastery.

He'll be contemplating false predictions and "young colored girls" under the tutelage of none other than the profit himself.

I think Mr. Davies has been selected from tens of thousands of candidates to succeed the aging profit and will now become the new "profit in training".

Look for Mr. Davies in the picture files at http://www.overcomerministry.org/ - he'll surely be included soon.

Maybe there'll be candids of him meditating "out behind the barn" with Sister Tameka and Sister Rasheeka and Sister LaWanda and Sister RaShanda.

Too bad Mr. Davies will be out of town during Huntsville hamfest.

But I'm sure he'd prefer to be making false predictions with the "young colored girls" over a delivering pizza to a bunch of geeky old ham operators any day.

I agree 100% that it is a matter of looking. And there is plenty in the
USA that I like. I've made it through about 1/3 of the States (mostly in
the east and mid-west) for one reason or another. And from a historical
and nature point-of-view there is much to be admired.

Visit the Rockies if you ever get the chance!

Fortunately, there are plenty of people to be found with in the USA that
have a healthy attitude to the world around them ;-).

Nothing there now, but Radio Verdad out of Guatemala is up on 4052.3.

I have seen some stuff about Radio Bishkek out of Kyrgyzstan operating there
over the years. But also see a supposed current freq. of 4010.

?

Don't really know! If I get a chance I'll try to tune in tomorrow night.

Where are you located? Here in south Florida I'm receiving Radio Verdad, Guatamala, on 4052 every night, sometimes strong enough to really enjoy, at times its just barely there. There's been nothing else on any frequency even remotely close to RV. Unless you're using an older receiver with limited readout you should be able to pin it down to 4052 kHz.

I'm in Brooklyn, NY. It may well have been Radio Verdad. It was so
faint I probably couldn't have traced it precisely to 4052. Maybe the
signal will be stronger tomorrow night.

Steve, a few weeks ago I received a QSL from them indicating a
transmission power of 800 watts. Quick reply, too. Very friendly
religious broadcaster that's well worth the effort to get a good
reception report to.

That's right. Accept no substitutes!

Ahem ...

Hear ye SWLs and hams, hear ye unto the four corners of the earth. THE GREAT LIBERTY NET is now in session on 3950 khz LSB. Forsake ye The Profit Stair. Nay, listen to him not. Forsake ye your silly attempt to hear that 10 milliwatt LW beacon from Antarctica. Nay, DF it not. Turn straight away from your foolishness, tune to 3950 khz for a life-changing experience ... listen to THE GREAT LIBERY NET!

"A Saturday without the Liberty Net is like a day without a bowel movement" ... WA9KJI.

Hi Kevin:
I'm in San Francisco. Over here, the best time to listen seems to be
0500-0700 UTC. The frequencies would be 6000 / 9550 / 11760 khz.

RHC is one of my favorite broadcasters, and I have several RHC
reception reports on my weblog: http://cobaltpet.blogspot.com/

And we concur - a very wise quote from a very wise man. In fact we once heard him called "the best operator in ham radio" by (if I remember correctly) Mr. Jimmy Dale, whom I do not know.

Welcome back, Y-Man - someone suggested that you were out having a 3-some with Janet Reno and Hillary Clinton.

THE ULTIMATE CHALLENGE:
DXING MEDIUM WAVE HARMONICS
By Don Moore
This article was originally published in The Journal of the North
American Shortwave Association.

If you've been reading NASWA very long, you've noticed by now that
shortwave broadcasters aren't the only broadcast stations using the
shortwave bands. On occasion loggings of mediumwave (AM) "harmonics"
creep in. But, although some mediumwave stations broadcast on
shortwave at times, usually when they do they don't even know it! And
that's just part of what makes DXing mediumwave harmonics such a
challenge.

WHAT ARE HARMONICS?
All radio transmitters naturally put out harmonics, which are
multiples of the fundamental frequency. For example, a station on 1400
kHz will transmit harmonics on 2800, 4200, 5600, etc. Twice the
fundamental frequency, e.g. 2800 khz, is called the second harmonic;
three times it, e.g. 4200 khz, is called the third harmonic, etc. The
first harmonic, or one times the fundamental frequency, is the
fundamental itself. Harmonics should not be confused with images,
which are generated internally in a receiver, and are usually received
plus or minus 910 kHz or 1000 kHz of a frequency, depending on the
receiver, or receiver mixing products that cause exceptionally strong
stations to appear where they don't belong. Harmonics are produced at
the transmitter, not the receiver.
Harmonics may seem like a free way for a small AM station to become an

international broadcaster, but AM stations don't want to intentionally transmit harmonics, as any power that goes into a harmonic frequency is not being used for their fundamental frequency, which means a less powerful signal for their main audience. In addition, harmonic transmissions are prohibited by law as these unintentional broadcasts on higher frequencies may interfere with other stations which are licensed to use those frequencies. To prevent these problems, station engineers suppress harmonics below a maximum level allowed by the FCC or their nation's equivalent agency, although enforcement may vary (especially in Third World countries). But, not all stations have competent technical help watching over the equipment, or even if they do, mistakes can happen. Sometimes something gets maladjusted or whatever and suddenly there is maybe fifty or a hundred watts going into a harmonic instead of half a watt or a watt. Usually the problem is so small that it won't be noticed until the engineer does a regular check-up on the transmitter, or someone hears the harmonic and tells the station about it. In the meantime, it's happy harmonic hunting for DXers!

I'm familiar with harmonics but I thought you might have a particular
station in mind.

Source record: 82595

Anybody have any comments regarding the Racal 6830? A friend of mine rebuilds them and so forth. This is his last radio - He is getting out of the business because modules are getting too expensive. Keep in mind that since he is a friend if radio breaks down he will troubleshoot. I will use the radio to replace the Drake I had to sell cause I needed cash.

73
NEO

Well, here is what he tells me:

My Racal contact has raised his prices a lot and now it would take about $1600 for a set of modules. I usually put 30 or so hours into making a perfect unit. I'm about 1/2 done with the one I'm working on. So there is no real profit in doing this. After that I'm done since it won't be worth my trouble. I sold off all the early rev modules so everything I have is latest rev stuff. I have never noticed a difference in performance though.
This will be the basic radio with 4 filters and one spare slot. No remote control or special functions. I do have 2 blank SDR modules that will plug right into the radio that do SDR demodulation with a cool spectrum display. They usually go for $1300 to $1500 on ebay.

No, 6000 kHz was coming in fine here in Seattle about 10:00 PM.
I think 6080 (?, 6060?) was there, too.

Good sounding audio, so they must have done some station work...

The BBC on 7120 kHz at 9:00 PM (4:00 UTC) was coming in good, too.

http://en.wikipedia.org/wiki/CONELRAD

In doing some research on Civil Defense I ran across the CONELRAD stations. In Wikipedia's entry there is a statement that hams were required in 1957 and later (presumably until 1963 at least) to check that a major broadcast station was on the air.

Any old-timers remember this requirement? Was it regularly done by working hams?

There was a such a law in the US, though since it was before my time (and
I'm not in the US), I've forgotten the details from when I read the
old magazines.

But for at least some of that period, US hams were supposed to monitor
the AM band to make sure that there was no Conelrad alert, because if
there was they were supposed to go off the air.

The ham magazines at the time were full of construction articles to
deal with this. In a Conelrad emergency, commercial broadcast stations
were supposed to go off the air, with emergency stations coming on at
specific frequencies. So there were lots of little adaptors to connect
to AM radios to either make sure the usual station was still on the air, or
to make sure the emergency frequency was still empty (I forget which
was tested for, and maybe it was on the whim of the individual). These
automated schemes meant the hams didn't have to actually listen to the
stations to see if they were still on the air, which would have caused
problems when transmitting with a microphone since you couldn't retransmit
a broadcast station over ham frequencies.

Michael

The Wayback Machine #29 by William Continelli, W2XOY

Picture the following scenario, in a slightly grainy black and
white for added effect. It's the 1950's; a ham is sitting at
his station, having a CW QSO. He's wearing a suit and tie,
before him is a Hammarlund receiver, a Johnson Viking
transmitter, and a homebrew modulator. On the wall are QSL
cards and his Honorable Discharge Certificate. On the table
is a collection of QST magazines, along with some curious
pamphlets, with titles such as "Protect Them--Join Civil
Defense", "America Calling--Take Your Place in Civil Defense",
"It CAN Happen Here", "Know the Signals", and even a comic book

featuring a character called "Bert the Turtle". While the Vibroplex clicks away, another radio sits in the background, quietly spitting out atmospheric noise. It's an AM Broadcast receiver, one of those 5 tube AC/DC models produced by the millions. This unit--an Arvin in an Art Deco plastic cabinet--is tuned to one of two triangular markings on the dial. Suddenly, the silence is shattered by a piercing 1000 cycle tone. The ham looks up, rips off his headphones, and listens to a message. He jumps from the chair, runs to the door and yells to his wife "Grab the kids and go down to the Fallout Shelter. The CONELRAD alarm just went off".

CONELRAD, which stood for "Control of Electromagnetic Radiations", had its embryonic start in December, 1951 when President Harry Truman signed an Executive Order directing the FCC to set up a security system for all civilian radio services. Throughout 1952, CONELRAD was developed and tested and, by early 1953, it was ready. The purpose of CONELRAD was to relay Civil Defense information to the public without allowing enemy aircraft to use our radio signals as a beacon for their direction finding equipment. In the event of an emergency, all FM, TV and most AM stations would proceed with the following alarm sequence:

>>CURRENT PROGRAMMING DISCONTINUED
>>5 SECONDS-CARRIER OFF THE AIR
>>5 SECONDS-UNMODULATED CARRIER
>>5 SECONDS-CARRIER OFF THE AIR
>>15 SECONDS-1000 CYCLE MODULATED CARRIER
>>1 MINUTE MAXIMUM-INITIAL CONELRAD MESSAGE
>>CARRIER OFF THE AIR FOR THE DURATION OF THE ALERT

The remaining AM stations would shift to either 640 or 1240 kc and simultaneously broadcast a more detailed emergency message. The stations would constantly turn their carriers on and off. For example, Station A, operating on 640 kc, would broadcast the emergency message for 15 seconds and suddenly cut its carrier. The public would then hear Station B, also on 640 kc, with the same message. When Station B went silent, Station C would appear and, after a few seconds, Station A would be back on the air. This "cluster pattern" would continue until the emergency message had been broadcast. The same activity would be happening on 1240 kc. No callsigns or other ID would be given. In this way, the FCC and the Office of Civil Defense hoped to confuse enemy aircraft trying to use AM radio stations as a homing beacon.

The ARRL and the FCC realized that amateur stations might also serve as a beacon. Therefore, from the beginning, amateurs were urged to keep watch on 640 or 1240 kc, and to kill their transmitters when the alarm was given.

With the importance of CONELRAD in the early 1950's, it's surprising that amateurs were not required to monitor for the CONELRAD alarm. This was rectified on January 2, 1957 when the FCC amended Part 12 of the Rules and Regulations to require the following:

>>All operators of stations in the Amateur Radio Service will be responsible for the reception of the CONELRAD RADIO ALERT by monitoring 640 or 1240 kc.

>>During a CONELRAD RADIO ALERT, all operators of Amateur Radio Stations will CEASE COMMUNICATIONS IMMEDIATELY.

>>Stations operating under the Radio Amateur Civil Emergency Service (RACES), and other stations specifically authorized, would be allowed to remain on the air under the following restrictions:
a) No transmission shall be made unless it is of extreme emergency, affecting the National Safety, or the Safety of life and property;
b) Transmissions shall be as short as possible;
c) No station identification or location shall be given. Tactical calls will be utilized if necessary.
d) The radio station carrier shall be discontinued during periods of no message transmission.

>>Amateur Stations shall not allowed back on the air until the CONELRAD RADIO ALL CLEAR MESSAGE is transmitted.

With the requirement of continuous Broadcast Band monitoring, homebrew projects, kits, and commercial products began to appear to help the Amateur keep in compliance with Part 12.190. While some Amateurs simply used an AM radio, others bought or built specific CONELRAD receivers. Heathkit had the CA-1 CONELRAD Alarm; Morrow Radio had the CM-1 CONELRAD Monitor; and the Walter Ashe Radio Co. had the model CA "Conelarm". Radio Shack's first transistor radio, which sold for a mere $29.95 in 1958 dollars, was advertised as "perfect for monitoring CONELRAD".

When Class D CB Radio was authorized in September, 1958, the rules specified that CB'ers also had to monitor CONELRAD. In the event of an emergency, all Citizen Band operators had to leave the air--there was no RACES provision for them.

By the early 1960's, the possibility of long range enemy bombers homing in on our radio signals was becoming remote. Instead, Intercontinental Ballistic Missiles were the new threat. They didn't require our broadcast signals as Beacons. CONELRAD was becoming obsolete. Thus, in the autumn of 1962, CONELRAD was replaced by the Emergency Broadcast System. Ironically, CONELRAD disappeared right around the time it might have been needed the most--the Cuban Missile Crisis.

As the 1960's wore on, the Cold War gradually dissipated, and the Specter of imminent enemy attack disappeared. Today, only the faded "Fallout Shelter" signs, and those triangular markings on old AM radios remain to remind us of CONELRAD and the Cold War. As I write this, I can hear a Springfield Mass station on 640 khz, while a hetrodyne of Class 4 stations co-mingles on 1240. And yet, what is that I hear, faintly in the background?? A 1000 cycle tone??

Another article by the fellow whom I jut posted states:

"And, finally, CONELRAD was still alive at the beginning of 1962.
Every ham had to monitor 640 or 1240 kc while on the air.
However, the basis for CONELRAD was becoming obsolete and, on
July 13, 1962, CONELRAD ended. It was replaced by the Emergency
Broadcast System."

Direction finding.

Hams had to go off the air in WWII, from right after Pearl Harbor till November 1945.

Practice that code!

I probably still have a RACES card somewhere. Being a kid I would
be home, and was to operate as 3MI10 (MI for Millburn NJ)

As I remember, we had one drill, and then it was forgotten.

The guy in charge had a yellow ford station wagon painted up with CD
doors. Went a little overboard, I guess.

I wouldn't be home anyway. I'd be in school.

What if the 'tard boy KB9RQZ screws up and mentions his QTH, or (most likely) decides
to communicate with the enemy?

Yup, points to Cecil for realizing this.

Based on similar turns of phrase in a private E-mail message sent to me recently (of the usual, unhinged, "I didn't ask to be welcomed to this newsgroup!" variety), I can say with great likelihood that the perpetrator of this forgery is the individual who posts on rec.radio.amateur.policy with the E-mail address "wussyroger@yahoo.com." I sent a complaint to alt.net and altopia.com in case they caught the poster in their logs.

It seems that we've really, really hit a raw nerve here among the unbalanced trolls who populate rec.radio.amateur.policy. They very much seem to fear the prospect that a new, moderated discussion newsgroup for amateur radio stands a good chance of getting created, one that will leave them behind.

I suspect that there will continue to be a storm of retaliatory forgeries for some time to come, at least through the fall. As I said previously, check the headers. If something appears to be from me, and is not from Novia/Newscene, then it's a forgery. Check also for misspellings, poor grammar, and obscene language.

I like the news on RHC. It is 100% factual, but makes use of errors of omission and other editing techniques to slant it slightly in their favor. It was great when Tom Delay was still in the House as he was their poster boy for US corruption.

I recall a RHC report about the US Embassy having an electronic sign that dissed Castro. Later, I heard an ABC news report about Castro cutting power to the US Embassy. Well, duh, that is one way to turn off that sign. Of course, ABC didn't mention the electric sign.

a feeling you? I doubt that

but I know WW2 was a hardly a disruption i the life of any member of
my family
now the horse theat grand dad owned I suspect would said otherwise if
they known why they were being asked to work harder than say 1940 of
course most of my family was the wrong age for that war may have helped
it being more of non intrusive indeed the only affect we would notice
was the shut down in the ars a little problem with gas rationaing some
minorthing like that

Oh, it's a forgery alright, unless he doesn't know how to spell his own name. He spelled it correctly once, mispelled it twice, and none of the domains resolve. And the sender was not using his ISP, which is easy to find.

A little attention to details, checking of headers, plus google goes a long way folks.

Yes it was a requirement and hams were *supposed* to monitor, but who would really know if all hams did?

My dad had a home-brew Conelrad monitor that was in use at his ham station whenever he was operating. It was a fixed frequency receiver, tuned to WJR, a 50 kW, clear-channel (at the time) station located in the Detroit area.

I was only 12 in '57 and two years away from getting my ham ticket, so I'm not really sure of the technical details other than that it was tuned to WJR (760 kHz) and operated a NE-2 neon bulb; if the WJR carrier went away, the bulb went out. Even though it was home-brew, I don't know if it was his own design or based on an article in the ham magazines of the day.

One of the other posters quoted that hams had to monitor 640 or 1240 kHz--but that's not quite right. They just had to monitor a local BC station...

From http://www.westgeorgia.org/conelrad/ :

> Even Amateur Radio (ham) stations had to monitor a broadcast station
> at all times, and to stop transmitting if there was a CONELRAD alert.
>
and from Wikipedia, http://en.wikipedia.org/wiki/CONELRAD:

Please note they said "a *normal* broadcast station", not 640 or 1240 kc/s.

"With the importance of CONELRAD in the early 1950's, it's
surprising that amateurs were not required to monitor for the
CONELRAD alarm. This was rectified on January 2, 1957 when
the FCC amended Part 12 of the Rules and Regulations to require
the following:

>>All operators of stations in the Amateur Radio Service will
be responsible for the reception of the CONELRAD RADIO ALERT
by monitoring 640 or 1240 kc."

I suppose one could go back and find Part 12 from that time to verify if that
were indeed true.

Not ham related, but Conelrad/EBS related...

When I worked at KVAS in Astoria (1230 KHz) we were required at all times to monitor the competitor station, KAST (1370). We did this with a single channel monitor in which the AGC drove a relay.. when the relay dropped, it turned on a red light and we were supposed to leave the air. Interesting that station that was directional out to sea and on 1370 was the local designated Conelrad and later EBS station, while the non-directional station on the frequency adjacent to 1240 had to go off the air. Seems to me that there would be less retuning for the job at KVAS.. but I'm just an engineer (and at that time was just a dumb teenager).. the FCC made those decisions..

Hi, Jim,

I'm not certain of the pilot lamp type number for your Kenwood,
but you might be able to do a visual comparison against the
descriptions and dimensions in this list from bulbs.com:

http://www.bulbs.com/products/product.asp?page=products&class=743

There certainly may be other, better sites to search. Hope this helps.

Regards,
John

The charter of the rec.antiques.radio+phono newsgroup discourages eBay SPAM and other for-sale (FA, FS, etc.) notices from people who have never contributed anything to past discussions.

The purpose of this group is to discuss antique radios and phonographs. Not to sell stuff.

If you have nothing interesting to talk about, kindly find some other place to spray your SPAM.

P.S. I bought my second (flawless) TO 3000-1 for $5 at a garage sale.

Regards,

Phil Nelson

1520. Palstar R30CC vs. Chinese 339HF

Newsgroup: rec.radio.shortwave
Date: 2006-07-10 01:28:53 UTC
From: katekebo <katekebo@yahoo.com>
Message-ID: <1152494933.739919.41140@m73g2000cwd.googlegroups.com>
Source record: 82606

Few months ago I bought on eBay a vintage Chinese military HF receiver 339HF. The radio was supposedly old-new-stock, still in its original box, and came with service manual (in Chinese, of course), two sets of headphones, lot of spare parts (transistors, capacitors, fuses, light bulbs), wire antenna and a backpack (the radio weights nearly 30lb).

After two months shipping time, the radio finally arrived more than a month ago. It definitely looked old and there were visible signs of some moisture damage, corrosion, and also some damage to the radio case probably due to a fall in tranport. So I wasn't very hopefull and let it sit in the box until yesterday, when I found time to unpack it, clean it, and put it work.

What a pleasent surprize!!! This radio is great.

Few words about the radio itself. It's a military receiver built in 1976. Fully solid state, analogue tuning and display, coverage from 1.5 to 30 MHz, in six bands, frequency readout down to 1 kHz. Dual conversion, four IF filters - 6, 3, 1 and 0.4 kHz - AM, SSB and CB modes. Only one AGC position (somewhat fast judging by ear) and OFF, manual RF and IF gain (I guess based on what the knobs do, as both the manual and all signs on the radio are in Chinese), manual adjustment of beat frequency. Two headphone sockets, but no speaker. Only one antenna input (high Z), but comes with an accessory impedance matching transformer to connect low Z antenna. Has one additional control knob that must be some kind of antenna tuning circuit, as it has an air capacitor, but does not seem to behave like fine tuning, it rather improves sensitivity based on behavior of the S-meter. The S-meter does not have any scale so it is only a relative indication of the signal strength, and it also can be used as battery voltage meter when the AGC is OFF. The radio can be powered with 10 D-cells in a removable drawer, or the battery tray can be replaced with an removable AC-to-DC power supply which is switchable for 220 or 110 V AC. The case is typical military constuction, thick aluminum painted camuflage green, with a sealed and clamped cover for the front panel. It is not truelly waterproof but definitely a different class from any consumer or amateur equipment. The interior is mounted on a solid cast aluminum chassis. Everything is very solid and "oversized", and somewhat "crude" by modern Western standards - while it is not pretty, it is definitely very robust and functional. The tunning mechanism is a complex gear transmission. The different functional blocks inside the radio are fully modularized and individually shielded. Net, a completely different standard of design and construction compared to what we see in today's "disposable" consumer electronics.

So yesterday I finally took the radio out of the box and started cleaning. Also the external case was rather dirty and with visible marks of mositure, the interior looked clean. The AC power supply was heavily correded on the exterior, as well as the battery trays and the headphones. I spent several hour cleaning it piece by piece with isopropylic alcohol (for a lack of any better idea). Finally when I judged that the radio and the accessories were clean enough to minimize the risk of a short circuit (and hopefully a case of bird flu for the user), I decided to power it up, first with batteries and then AC.

Frankly I wasn't expecting the radio to function, at least not 100%. Contrary to my expectations, the radio works perfectly and still have not found a single problem. I hooked it up to a 40ft wire antenna and decided to compare it side-by-side with the Palstar R30CC.

So how does this piece of old Chinese military metal compare with a modern receiver? Surprize, surprize, the 339HF not only matches, but is some aspects it actually beats the R30. Here is my subjective review:

- Sensitivity: The R30 is clearly more sensitive, but in practice with the 40ft wire antenna it only translates in more atmospheric noise. Even with no signal and a long antenna the R30 S-meter reads at least S-3 on the lower bands (5-10 MHz), and the atmospheric noise is clearly audible and rather harsh. On the other hand the 339HF is a very "quiet" receiver, with much less background noise when no signal is present. During 3 hours listening session I could not find a single weak station (that would barely stand out from the background noise) that would sound better on the R30. On the contrary, seveal very weak signals actually sounded better on the 339HF (see more below under audio recovery).

- Selectivity: The acid test was Radio Universidad from Mexico City (weak signal from 10kW transmitter on 6185kHz) right next to Radio Nederlands on 6190kHz from Surinam. On the R30 Radio Universidad was only intelligeable using LSB and narrow filter. In AM, with the wide filter, the powerfull Radio Nederlands would complete "swamp" the weak signal, while with the narrow filter the audio was so muffled that it was very hard to understand, yet still with some signs of interference. The 339HF 6kHz filter would produce similar results at the R30 wide filter. However the 3kHz will produce a signal of similar clarity as the R30 on LSB, but more pleasant to the ear. Using SSB on the 339HF did not produce any significant advantage over the AM mode.

- Dynamic range: The 339HF can definitely accept the 40ft antenna without a slightest sign of overloading. I have not detected any images either. The only "defect" found so far is that a local AM station on 870kHz, which transmitter is only a mile or so from my house, leaked through somewhere around 9MHz - strangly enough it was a weak but very clear and "narrow" signal which could be tuned as if it was a distant SW station.

- Audio recovery: This is an area where the 339HF really shines. The audio is very pleasent, with a nice balance between bass and treble

tones, no harsh noises, and somewhat mellow, very much like an old tube receiver. It is definitely much nicer than the R30 which tends to sound harsh on very weak signals and during fading. Although in absolute terms the audio recovery for weak DX signals is about the same on both receiver, it sound more pleasant on the 339HF resulting is less "listening fatigue" after extended period of time. The only radio I have used so far which I would give a similar audio quality as the 339HF was the Lowe HF150.

- Ergonomics: Although the frequency readout is down to 1kHz, the scale is somewhat misaligned and now the radio misreads anywhere by 20 to 50 kHz depending on the band and frequency. Of course the scale can be aligned, and I will probably do it if I find somebody who can translate the service manual for me. However, it is very repeatable and stable. I have noted down the offset vs. WWF on each band I could test, and once the difference is taken into account I have noticed less than 1kHz drifting or change after 3 hours of operation. I repeated the test today, and after approx. 30 minutes warm-up the offset is consistent with yesterday's tests. The knobs are scattered around the front panel in somewhat strange pattern at first look, but after some time the operation is very logical and intuitive. All the knobs and controls are large, and although somewhat stiff, they are very easy to adjust and have a very solid feeling. SSB operation is somewhat more difficult than with the R30 due to the manual beat frequency adjustment, but very usable with a little bit of practice.

I connected the radio to an external audio amplifier and the sound through large speakers is as good as I can remember from any radio I have used or listened to.

Net, a very pleasent surprize and this radio has instantly become my favorite DX machine. In terms of selectivity and dynamic range it sounds as good as the R30CC, while the audio is as nice to the ear as the Lowe HF150. It beats the HF150 and the Sony 7600GR when it comes to strong signals and large antennas.

I hope it will last "forever", which may not be such a outrageous expectation, as it has come out working perfectly after 30 years of sitting in some Chinese military warehouse, where is was obviosly subject to less-then-ideal storage conditions judging by the widespread corrosion of exterior metal surfaces, and moisture damage to the canvas bag, cartons, manual and all rubber or plastic surfaces.

Try 9820 this has generally been their best frequency to my area for
years. I heard them tonight in english on this frequency S9 +10 and they
sounded pretty good except the audio was about 1/2 strength. I would not
encourage them to crank it up because they will probably start to
splatter or something worse. I don't listen to them but stopped long
enough to note better than usual modulation (clean an undistorted) but
weak.

According to Passport 2006 they are english on this frequency 01:00 to
05:00 UTC.

Considering at least a couple are from Ebayers no longer registered, I think 5 negatives vs. 198 positives is not a bad track record. Also the majority of the negs, the few that are there, were from buyers who never alerted me about problems, and left negatives weeks after the fact. One guy dinged me like 2 months after an item shipped. By that time it is out of my hands.

I would most likely have numerous more positives but due to my bad experiences I no longer post feedback until the buyer does first. Not the best policy but it helps to protect myself from reckless buyers and their feedback.

I listened for them tonight and they were S3 on the peaks. My main
problem is static crashes prevent me from understanding them. Best
signal levels were in the 02:00 to 05:00 time frame then they faded out
or went off the air. Mostly heard them playing music and the programing
appeared to be religious. I really planed to listen 05:00 to 06:00 UTC
because according to Passport they were supposed to be english but the
static crashes from lightning would have prevented me from understanding
what was said anyway.

The signal was strong enough for me to zero beat at 4052.455 and my
radio is about 5 Hz high so 4052.450 KHz.

I looked at a couple of the "Neutral" feedbacks I received. One was from a guy who bought a metal clock part that was well over 120 years old and he complained about rust. Another was from someone who gave me a neutral even though we had not participated in a transaction and I noted that in my reply. Some things are out of my hands as a seller and especially as a seller that deals mainly in vintage electronics, etc. I always list items "as-is" preciesly because I cannot guarantee perfection from used and in most case older items. If you can more power to you.

From: weatherall <weatherall.2aq339@news.radiobanter.com>
Message-ID: <weatherall.2aq339@news.radiobanter.com>
Source record: 82625

I had success receiving Radio Australia last summer in the 19 meter band. I've been looking up their frequencies on primetimeshortwave.com . Lately I am only getting faint signals, which are even weaker than the Voice of Russia.

Has anyone in North America had success with Radio Australia in the past few months? I'm curious to know which times and frequencies are successful.

Typically I use a Sony ICF SW7600GR or Eton E5 with just the builtin antenna. Grounding hasn't helped much - the signal just seems too weak. I'm in an apartment and I don't have the option for a lengthy outdoor antenna. I have a DE31 loop antenna that doesn't really help.

This is a good HF aero page:
<http://microvoltradio.com/high_frequency.htm>
It has both military and civilian aero frequencies. 11.175usb was really hopping prior to the PDRK July the 4th party. Sometimes you have a park a radio those HF aero frequencies a long time to hear something.

You want want to try PC-HFDL for yucks. There is a free version and a modestly priced "pro" version. PC-HFDL seems to use the wrong frequencies given the time of day. That is, you will find your local facility (Dixon for those in the bay area) using low frequencies during the day and higher frequencies at night. I don't know if this is intentional for the signals NOT to propagate too far.

Frank blasts the fiend Kim Jong Il, listing the attrocities committed by his Communist Monarchy. Bush was absolutely right to call it an "Axis of Evil" - Whether it's the lunatics running around with filthy towels wrapped around their heads in the Middle East, or this pot-bellied, degenerate pig of a tin horned dictator in North Korea, the name is correct.

Frank then concludes that the problem of North Korea is not because of Bush, but rather comes from every Democratic President, starting with Harry Truman, who fired the great general Douglas McArthur, Lyndon Johnson, who did absolutely nothing, to Bill Clinton, who gave nuclear technology and knowledge to North Korea during his time in office.

France shows how it is an enemy of the West by honoring Muslims at the Battle of Verdun... a new segement, "G'Day, Australia!" debuets... China harvesting organs against people's will... why libraries are not Socialism... conservatives call in to debate Frank and John... your phone calls and more at 718-761-9996.

So you've been receiving complaints since 1999, yet have kept on
sending unsolicited email (UE) anyway.

What a stellar track record.

Your "logic" for continuing your UE ("My ISP lets me do it.") is very
similar to Mark Morgan's logic for continuing his ongoing flood of
rrap. Will you stop the UE once you have created your own moderated
group in which to play?

Somehow I doubt it.

Well, in 1960 there was no KB9RQZ, but I'm sure the Russkis could've
located some Callbooks if they were interested :-).

Of course today we have Broadband-over-power-lines and IBOC so any kind
of long-range direction-finding on HF is presumed impossible.

Tim.

I was listening to Radio Australia earlier this morning on 9580 khz.
The signal was good...good enough that I'm sure it would have been
listenable on my SW7600GR using only the whip. I'm in NY.

Truthfully, despite what I heard the other day (no, I did not imagine
it), I honestly don't know what Chuck Harder's situation is.
Like I've said for years, Chuck should have retired long ago. His
political constituency (I call it the Timothy McVeigh crowd) is long
gone.
The only reason Chuck is still on the radio is because he is still on
the radio. I realize that sounds a bit recursive - an example of
"circular reasoning" - but it's the only explanation I can come up
with. I guess radio talk show hosts are like civil service folks (or
Supreme Court members): they're in it for life, and it's awfully hard -
or impossible - to fire them.
Late last week, to find out more about what happened to Chuck, I tuned
in to his radio network (TalkStar) early in the morning and kept it on
until Chuck's program cranked up. There was no mention of Chuck during
the earlier shows - absolutely nothing. It was as if "For The People"
never existed. That contrasts with Chuck's earlier networks, where the
hosts of the other programs - both before and after "For The People" -

would mention the show on a fairly regular basis. Not to mention all the ads for "For The People," most of which were narrated by Chuck himself.
Not this time.
The spookiest aspect of Chuck is the fact that he doesn't take callers anymore, and hasn't done so for over a year.
Why?
Finally, there's that cute gal with the light Southern accent urging Chuck's listeners to "e-mail two friends" to tune in, so that Chuck can "double" his audience and rescue the U.S. of A. because "now, more than ever, America needs Chuck Harder." Sadly, those PSA's are starting to get on my nerves.

Some areas of the U.S. receive a much stronger Radio Australia signal
than others. If you are located on the west coast chances are the
signal will be much weaker than on the east coast where it can peg the
s meter on a portable.

I disagree unless we are going to ban links to auctions by ALL members of this group and not just a select few. We will have to ban links by a few long time members who also shill their auctions. And of course we will have to ban the long-running forum sport of providing links to and nasty comments about auctions of certain competing dealers.

When the IBOC sidebands extend out into the signal you want to hear,
not really possible to "filter" without getting rid of the signal you
want.

Listening to the sideband with the least interference (e.g. the one
away from the IBOC station) helps some.

Some use of directional antennas (especially ones with deep nulls, e.g.
loops) has been succesful at my QTH.

Tim.

I should note similar strong rumors from allegedly reliable sources flew
around the time of the NAB Convention in April - and nothing happened.

I'm sure nighttime IBOC *will* be authorized eventually, but I'll
believe it when I see (hear) it!

(the fact that approval has taken this long leads me to believe there's
a major tug-of-war going on at the FCC, that there are large parts of
the staff that believe it's a REALLY bad idea. I don't *think* anyone
on the Engineering staff will quit over this approval but I won't be
stunned if it happens.)

Buy a HD radio.

Seriously.

The Boston Acoustics Receptor HD, when tuning *analog* stations, seems largely immune to IBOC QRM from *digital* stations on adjacent frequencies. The set uses digital signal processing of analog signals; I might guess that it uses the opposite digital sideband to cancel out the one that's interfering with the desired analog station.

In general, my experience has been that the Receptor HD is a pretty decent analog radio, both AM and FM, if you give it a decent antenna. (the antennas provided with the radio are crap) Of course, it is pretty expensive as well!

Of course, the problem for the radio industry is that almost nobody *has* a Receptor HD - when the interference cranks up, people will buy XM or Sirius, put in a CD, or turn on the TV long before they'll buy a HD radio.

Baj since you are writing a formal paper, you will find Merriam-Webster's
Open Dictionary quite helpful - URL:

http://www.m-w.com/home.htm

It returns this for mike
Main Entry: 1mike
Pronunciation: 'mIk
Function: noun
Etymology: by shortening & alteration
: MICROPHONE

Main Entry: 2mike
Function: transitive verb
Inflected Form(s): miked; mik&#65533;ing
: to supply with a microphone

However your statement is questionable as to whether the staff meetings are
to be recorded or placed on a PA system or perhaps both.

No, because it apparently affects both sidebands pretty equaly. If one wants to listen to a weaker adjacent channel from that running IBOC one is going to be in a world of hurt.

I currently have that problem here with a station I used to listen to regularly on 790 that is now totally obliterated by the daytime IBOC from 780.

No can listen no more.

Your location and time of day?

>Has anyone in North America had success with Radio Australia in the
>past few months? I'm curious to know which times and frequencies are
>successful.

UTC times

17795 from 23:00 to 02:00 About s3, but fairly low noise
15515, 15240 around 4:00 about s4-s6
9580, 9590 8:00 to 14:00 or 16:00 S9 or thereabouts, drops a bit
around 12:00
6020->5995, 7240 local morning (around 14:00) winter frequencies
this time of year they're weaker and noisier than 9590
9710 16:00-? irregular, some days good, some bad
11880 mid-morning (west coast time)

There was a picture (along with an article about US diplomats in Cuba)
in the local paper this last week showing that the Cubans had put a
flag plaza in front of the US interest section so that you can't
see the display anymore.

There will probably be a flood of formal objections, if not lawsuits,
to the FCC from stations being interfered with IBOC; the FCC has a
formal complaint process in place, that if it becomes necessary, the
station causing the interference can be forced to shut down the IBOC
transmission. Instead of posting rumors, wait and see, if this really
happens. I have checked most of the electronic stores on-line(Circuit
City, Best Buy, Radio Shack, etc.), and most of them only carry one HD
radio. I can't imagine there will be any public demand/interest in
IBOC, considering satellite radio, so stations will find out real
quickly, when they have lost 99% of their listener base, if IBOC ever
goes completely digital. Honestly, does iBiquity think they are going
to be able to obsolete the estimated 800 million analog AM/FM radios in
the US. As posted before, stations have turned off IBOC, because of
adjacent-channel interference to their neighbors.

As far as rumours go, I trust Glenn Hauser's judgement.

Far more than I trust yours!

Why don't you focus all that hate/hostility into finding yourself a new
hobby, since SWL and AM DXing are dying !

Yes, you are right; that is why I am not too concerned about nighttime IBOC approval, despite what all the rumor mongers say. Only a handful of stores are carrying only one HD radio; with satellite radio, there will be no demand; most people have not even heard of HD radio.

Whether or not the radios are available or whether or not most people have heard about HD radio is not the point, shit for brains.

The point is if the broadcasters are allowed to turn the crap on at night it's going to make one hell of a mess, regardless of any other factors.

1584. VERISMO - Brooklyn's Thrash Metal

Newsgroup: rec.radio.shortwave
Date: 2006-07-10 16:33:38 UTC
From: verismo@gmail.com
Message-ID: <1152549218.348745.189760@m73g2000cwd.googlegroups.com>
Source record: 82769

Brooklyn's most exciting metal band, Verismo, has released the most suprising debut since the city started scorching immigrants into rock virtuosos. On their new record "City of Kings," the band astonishes with perfectly crafted metal originals - immediately full-throttle songs that need to be heard. Each song features the insanely precise and inventive guitars of vocalist Stephan Laboccetta, the colossal bass of Vincent Cruz, and Tamas Vadja's breakthrough drum attack. The instrumental majesty of metal and the fury of punk rock ignite on this record like rarely before. Here is a combustion of classical metal elements, heart-piercing lyrics, and sheer song writing skill soexplosive that it will be heard far beyond New York City. Expert energetic thrash metal one minute, achingly perfect and accessible hard rock the next, the new release establishes Verismo as the most authentic metal band in the city of kings

Careling? Isn't that something folks tend to do around Christmas time?

Greedy? Well, yes, I suppose. I'm for getting all I can.

I'm not lazy, I'm retired.

Boy, you really missed the point ! They can turn it on, but if there
are viewer complaints, which has already happened, they will turn it
off. According to FCC rules, any stations that are interfered with,
can file formal complaints, and be sure, there will be a host of
lawsuits. Also, if HD/IBOC ever goes completely digital, and if the HD
radios are not in the hands of the public, the radio stations will
figure that out real quickly.

You obvioulsy have little to do, but troll this newsgroup with your
flames and hostility, because you know that DRM will obsolete your
analog SW receivers. Acting like this, at your age - geeze !

Since skywave is so seldome used, this is all unlikely. What has been
suggested is a lowe HD injection at night, like -24 to -28 db from the
analog, instead of -20 db.

> I have checked most of the electronic stores on-line(Circuit
> City, Best Buy, Radio Shack, etc.), and most of them only carry one HD

That is because the new receiver design specs were only issued a few months
ago, and the word at CES is that the receivers will be coming in increasing
alternatives and lower prices after the Summer.

There is no plan to go 100% digital and kill the analog.

Gee, I've heard talk like that since I first was introduced to shortwave radio in the mid 60's.

> Acting like this, at your age - geeze !

My age? Heck, I'm still fairly young, not even 55 yet.

Yeah, saving AM through QRM.

Great plan there, Edweenie!

I love it when you use the *WE* shtick. It sounds so, well it sounds so egotistical!

You are an idiot. I don't know a real broadcaster on the planet who
reacts with indifference when told his signal is getting trashed and
that he has lost a listener.

One Paso? How much is a 'Paso' worth these days?

And if the price is indeed in 'Paso's" should that not be 'seester' rather than sister?

I doubt many people will buy IBOC radios for the presumed audio advantages. The market for high fidelity AM has always been small and FM can sound excellent as it is. However, there probably will be some public interest in the secondary FM channels. And ibiquity's licensing arrangement demands that any AM - FM radio must have IBOC decoders for both bands. There won't be any standard AM - IBOC FM radios, at least according to the current plan.

So, in the future, there's a good chance there will be a significant number of IBOC radios out there. I pretty much expect the AM broadcasters to enthusisastically jump into IBOC AM, just like as jumped into AM stereo.

AM stereo never caught on. The buying public never much cared to buy the radios. AM stereo came and went.

It would be ironic if the only way to avoid the IBOC sidebands is to buy some damned ibiquity licensed radio.

Which kind of underscores something that has been alluded to, but never really stated outright, until this past couple of weeks....

This past week, XM Canada entered into an agreement with a cellphone carrier to distribute XM on cellphones.

I hadn't thought about my cellphone much. I tend not to carry it unless I"m specifically expecting a call from someone I want to hear from. Otherwise it sits on my desk. But when I read about the XM Canada deal, I realized that my cellphone has not only an FM radio built in, but internet access.

See where this is going?

Eric Richards made a good, and rather vocal, point--that currently, there are alternatives to terrestrial radio. There's internet radio. The iPod is ubiquitous. And now handles everything from ripped CD tracks to network TV shows. More stations are podcasting. Thousands are streaming. XM and Sirius are carrying whole radio stations, now, with more in negotiation.

Last month was announced the first standalone internet radio. No PC required. You can simply plug your broadband connection into the back and select from thousands, if not tens of thousands, of Internet Radio stations.

And commercial broadcasters are beginning to sign on to every one of these alternative methods of delivery. Which raises a real interesting question:

Who needs the headache and expense of maintaining a full power broadcast audio channel?

Now, I've heard IBOC. I'm not impressed. What I've heard has not met the expectations claimed for it. That may change. But then, again, maybe not. The real benefits of digital audio/broacast are not in audio quality--that's subjective and debatable till we all meet at

Milliways--the benefits of digital are in management and distribution. And THAT means profitabiltiy. Any audio can be put anywhere, sent in seconds, even pulled from an archive without a human attendant. In precisely the quality with which it was put there. Regardless of the source, transmission, or end user hardware. For the one-time cost of the hardware.

What IBOC does, that no one has substantively addressed, is it puts into play a high tech solution for the ever increasing recurring costs of maintaining a transmitter. IBOC uses a fraction of the power of a broadcast transmitter to cover about the same area. Broadcast Manglement comes at that thought. The idea of being able to put their signal out there, and cut the power bill by 50% makes GMs wet and throbbing. Lower cost, higher profit. Local radio stays local. And IBOC becomes only ONE of an ever increasing number of ways for listeners to interact with the Radio Station. The transmitter becomes one channel of distribution.

And when you've got the ability to pull the station out of the air with your cell phone, a portable satellite receiver, or an IBOC radio, what really does that mean for IBOC generated interference on a band where most of us admit, the pickin's is so slim that we have to tune out of market to find something listenable.

Kind of renders the point moot. And there are more methods of distribution being created every day. Meaning, that terrestrial radio is becoming less important as a source. One of many. One that's rapidly slipping from the most convenient and ubiquitous, to more inconvenient, and easy to overlook.

Now, for us, that blows. We enjoy the process of setting up, and capturing, with some anonymity, the content of our choosing, even if it is found across the country. And doing it for no more than the cost of our own ingenuity, and what hardware we build/buy.

Those days are coming to a close. At least with the toys we currently have.

And as for DRM.....I've heard DRM. It was, in a word, impressive. Still not FM quality. But close enough. Full bandwidth music, in stereo, on shortwave. Hoodathunkit? And yet, there it was.

And again, requiring less energy to distribute to the same target.

SW broadcasters have been on the internet, and satellite, now for a decade. The actual transmitters, as with MW transmitters, are becoming just another outlet. Just another method of distribution. DRM interference, is just another minor annoyance for a service that's lost it's place in the pantheon of content distribution options.

A little short sighted in some cases. Especially, as we learned from Galaxy 5, that distribution in the hands of 3rd parties can leave broadcasters severely cut off. But short sightedness is the order of the

day. Especially when there are budgets to be cut. And bonuses to be collected. And given that many of our international broadcasters exist to present sources of information alternative to domestic media...well...trashing shortwave also allows political influence on content by controlling access. Something, we, as SWL's, have understood since WWII.

Timetables? Good question. Terrestrial radio companies needs to find ways to make alternative outlets profitable with advertising support. Believe me, they're working on it. When the model is finally struck...and it won't come from the broadcasters...it will, as always, come from the advertisers, things will evolve pretty quickly.

Radio will survive. Not in a form we recognize, perhaps, but it will survive.

So, yeah, when IBOC goes full time, things will be a mess.

You see, Richards was right....we, as listeners have alternatives.

So, actually, now, do the broadcasters.

As far as the interference goes...the broadcasters...the FCC....

They don't care.

They don't have to.

There will be a slew of objections, from interfered stations, to the
FCC and lawsuits. The stations have the option of turning off IBOC,
which some of them already have. I have never heard that, dfor example,
a 50K watt analog only stations, will be able to reduce its power
comsumption, by running IBOC. Also, it has been shown that IBOC does
not have the coverage, or penetration, of analog.

It was, due to Leonard Kahn, 5 years too late. When original introduced, it would have made a difference as AM still had a majority of listening. By the time a system was authorized, AM had "died" as a music medium.

> s meter on a portable.

NZ and Australia are weak during the daytime and much stronger
dinnertime to middle mornings. Last night (dinnertime on) they were very
strong on the 19 meter (15Mz) band and 22 meters (13 MHz) band. Try
KHz UTC
15515 02:00 to 07:00
15240 01:00 to 07:00
13670 07:00 to 09:00

The 13630 is listed but my sometimes faulty brain thinks they are on
13670.

NZ is the same story, dinnertime to early mornings are the strongest
signals.

I don't see a problem, as part of the hobby, with a short post (link) to
sell a SW or medium wave radio.

If you are dealing in radios as a business or do it on a regular basis I
could see people complaining. You do not want to use the news group for
commercial reasons or do it often because that will annoy people.

Some people don't like to see any posts FA or FS so use FA: or FS: at
the beginning of the subject line so people can filter them out.

Well, you can avoid most IBOC interference at the moment by nulling
it away with your no doubt directional antenna. With multiple IBOCs
on the same frequency that won't work, of course. And you may
already be using your null to take out another station on the same
frequency, which hobby will disappear.

Also the IBOC hash is much stronger on the sideband away from the
offending station, so use LSB to listen to 770 hashed by 760's station,
and USB to listen to 750 hashed by 760's station.

It no work! If the hash from 760 is already physically on the 770 frequency then the 770 frequency is unusable.

And... I just tried it with the problem I have here with WBBM 780 Chicago which runs HD/IBOC QRM interfering with 790. If I switch to 790 USB I actually get more hash/noise than I get with 790 LSB.

And yes, I tried it with four receivers, Drake R7, R8, R8A and R8B... all the same.

Hmmm... I check Air America on 1530 every now and then just for fun. I wonder if I'll be able to get 1360 here?

No matter I guess, when the HD/IBOC (QRM) gets turned on at night, it'll all be over.

Hmm. The flamethrowers locally (1530 and 700) like to
spout off how many watts they transmit with. It'll
take a pretty big change of attitude at those stations.

--Mike L.

1639. BTW....

I hate fanning the flames, but just so people know, in
Cincinnati most of the content found on 1360 Homer
(sports talk and Bengals games, among other things)
is moving to 1530. Air America is moving to 1360.
